Is all or part of your submission confidential? Yes, all ☐ Yes, part ☐ No ☒ ☒ (copy box to indicate answer)

If part, please identify which sections are confidential:

Reason for confidentiality:

SUBMISSION

I provide my submission in support of the continuation of the Current Vegetation Management Act 1999 and rejection of the changes proposed in the Vegetation Management (Reinstatement) and Other Legislation Amendment Bill 2016 ("the Bill").

My overriding issue with the Bill is that its introduction in the Queensland Parliament on 17th March represents **yet another** variation to the Vegetation Management Framework, which has been amended over 18 times since its introduction in 1999. This constant change in legislation severely impacts on the ability of farm managers to plan and implement effective long-term property and business management decisions. Ecological processes work in much longer timeframes and can be severely compromised when mismatching regulations are enforced. Farmers have long called for certainty with the vegetation management regulatory framework. With the Bill being introduced when farmers are on their knees with over 86% of Queensland in drought conditions, it should come as no surprise that I am totally opposed to continued uncertainty and attacks on the viability of myself, the long-term sustainability of my business as well as attacks on fellow farmers.

TO CONTINUE WITH MANAGEMENT PLANS IN PLACE FOR OUR BUSINESS. THESE PROPOSED CHANGES HAVE LEFT US IN THE DARK AS TO, WHERE TO PROCEED WITH REGROWTH PROBLEMS, NEW FENCING TO BE RE-EVALUATED AS TO HOW MUCH CLEARING CAN BE DONE TO INTRODUCE NEW CONTROLLABLE PADDocks, AND EROSION MANAGEMENT WITH THESE AREAS.

1. Removing High Value Agriculture and Irrigated High Value Agriculture from the Vegetation Management Framework

Background

HVA and IHVA permits provide farmers in northern Queensland with the opportunity to grow fodder and grain for supplementing in the dry season and finishing off stock for market.

The removal of HVA and IHVA is in direct conflict with the Australian Government White Paper on the Development of Northern Australia. The Changes to the Vegetation Management Framework will prevent indigenous and non-indigenous land holders from developing agriculture projects.

***B.** IT LIMITS THE ONGOING FUTURE OF PLANS TO IMPROVE THE VALUE OF THE PROPERTY, AND HAS NOW THE POTENTIAL TO DESTROY PLANS FOR FURTHER IMPROVEMENTS, ALREADY IN OUR MANAGEMENT DIRECTION.

2. Re-introducing Reverse Onus-of-Proof

Background

The inclusion of Reverse Onus of Proof in Queensland Government's Vegetation Management Framework is a direct affront to the rights and liberties of farmers. Reverse Onus relegates farmers clearing vegetation to a level below that of criminals, where they are denied common justice under Section 24 of the Criminal Code: Mistake of fact. In Queensland farmers will be presumed guilty until they are proven innocent. They are also refused the defence in making a mistake, despite known faults with the mapping layers.

*C. TO BE CLASSIFIED AS A CRIMINAL FOR TRYING TO IMPROVE THE SUSTAINABILITY OF LAND UNDER OUR SO CALLED CARE IS A DAMN SHAME ..

3. Including High Value Regrowth as an additional layer of regulation under the Vegetation Management Framework on leasehold, freehold and indigenous land

Background

The re-inclusion of High Value Regrowth (HVR) as an additional layer of regulation on leasehold, freehold and indigenous land is an overt grab by Queensland Government in search of targets for meeting international treaties such as the Kyoto Protocol and more recently the 2015 Paris Climate Deal.

*E. CLEARING CONTINUES FOR COASTAL HOUSING TO ACCOMMODATE PEOPLE, BUT THE FARMERS AND GRAZERS NEED SUPPORT TO FEED THE PEOPLE, NOT MORE RESTRICTIONS ON THEM.

4. Increasing Category R vegetation to include the Burdekin, Mackay, Whitsunday and Wet Tropics Great Barrier Reef catchments and additional catchments Burnett Mary, Eastern Cape York and Fitzroy.

Background

This increase in Category R provisions is a further restriction on development in Northern Queensland, which is in stark contrast to the development imperatives contained with the White Paper on Developing Northern Australia.

The science is completely unproven on the necessity to include ≥ 50 metre buffers along streamlines. In fact, a study conducted in Queensland and published in 2016 shows that grass is a far better assimilator for nitrogen to prevent leaching into waterways. The current bleaching of the Great Barrier Reef is not caused by high nutrient runoff from agricultural lands.

*F.

FAILURE TO BE ABLE TO MAINTAIN THESE AREAS, WILL NO DOUBT RESTRICT THE LAND HOLDERS ABILITY TO CONTROL PESTS AND DANGEROUS INVASIVE WEEDS (INTRODUCED).

5. Other matters relevant to the Vegetation Management (Reinstatement) and Other Legislation Amendment Bill 2016 that the review committee should consider appropriate and worth some consideration

*G.

CATTLE DON'T LIVE ON TREES, FOOD PLANTS DON'T GROW ON ROADS OR IN URBAN AREAS. THE VALUE OF OUR LANDS WILL BE REDUCED.
