To Whom it May Concern

I wish to make a submission regarding Queensland's vegetation management legislation.

Qld is now clearing at the rate of 800 hectares per day, the rate having exploded since the LNP reversed the previous governments vegetation management legislation. In that time, it has increased three times over the 2012 clearing rates. Australia cannot meet its Paris commitments while this is happening. In fact, Queenslands carbon pollution is set to skyrocket.

I want the Palaiscuk to please address our international obligations and reduce vegetation clearing in Queensland as a matter of urgency.
