Queensland Parliament Hendra Vaccine Inquiry

The Agriculture and Environment Committee Hendra Vaccine Inquiry, C/- Mr Rob Hansen,
Parliament House, Brisbane, Qld 4000.

1. Hendra vaccination should be done on all horses, regardless what they do. It is for the health of the horse and other animals and humans around them, especially for vets that need to treat them. The risks are too high for people to be lazy or think it is a waste of time, or think the vaccine does not work.
2. Yes I am happy with the way the vaccine was developed, as they would use such a high standard in creating the product.
3. The vaccine is very effective.
4. No I have not heard of any major side effects from this product.
5. I feel very safe around horses knowing that they are fully vaccinated.
6. Hendra virus does kill humans, so it is very important that all horses are vaccinated, regardless of what they do.
7. Vaccination for Hendra virus should be compulsory does not matter were a horse is
