Parliament Hendra Vaccine Inquiry – Submission

Having worked with a nurse who contracted Hendra Virus working with horses has brought to my attention how vulnerable we are working with animals and horses. I have not heard of any vaccine reactions personally but like any vaccine there are potential complications, it still out-weighs the risks.

I do believe Hendra vaccines should be compulsory, no animal treatment should compromise a human life. I also believe there has been less reports of horses being diagnosed with Hendra since vaccinations became available.
