I am writing regarding this Hendra vaccine enquiry. I had 5 breeding horses vaccinated in 2013 and the result was one young mare stopped cycling for close to a year but then returned to normal and one stallion who has always been fertile didn't have any of the 3 mares bred fall pregnant. I am pleased to say he his fertility has returned now and his first foal since the vaccination was born in january 2016.

Horse people live in fear of no vet attending unvaccinated horses this stress is very real and it affects us daily. With the Work place health and safety now prosecuting vets regarding unvaccinated horses our chances of getting vets to attend our sick horses is close to Nil. I don't feel as a horse owner that vets are responsible for our safety around our horses

Please help the horse industry to be able to continue enjoying our hobby without fear of not being able to save our much loved fur family due to a vaccine that has so many side effects it leaves us in fear.

Please stop the neglect and cruelty our horses receive from lack of vet care.

Regards
