To whom it may concern.

We are the owners of 11 horses and have been forced to vaccinate twice a year. We think that is too much and we have a problem with one of our horses after she receives her vaccination. She becomes very stiff and sore , every single time. We feel there is no need to vaccinate twice a year, and we do not want to vaccinate twice a year, we are happy to do it once a year and feel that that should be and is enough.

Please consider this as we feel this is an important issue .

Kind regards

Louise Cable and David Frazer
