

Appendix C – Summary of submissions

This summary represents advice provided by the Department of Natural Mines and Resources on issues raised by submitters.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA	Chapter 2 and Chapter 5	Dealings, caveats and associated agreements - Importance of regulation	The 'technical and procedural matters' to be included in the regulation under the Bill include a large number of important dealings and applications provisions. A draft of the regulation under the Bill has not yet been released which will contain significant details on the application of these provisions. APPEA understands the DNRM is currently drafting the regulations and will release them for consultation with industry as this Bill is passed through Parliament.	The department thanks APPEA for its submission. It is the department's practice to consult on legislative amendments of interest to relevant stakeholders and this will continue to include APPEA.
		205	Dealings, caveats and associated agreements - Continuing effect of dealings	Registered dealings and associate agreements should carry over to subsequent higher-level authorities granted from prerequisite tenure and replacement tenures.	<p>Clause 527 of the Bill amends section 908 of the <i>Petroleum and Gas (Production and Safety) Act 2004</i> (P&G Act) so that all dealings recorded against a petroleum tenure granted under the <i>Petroleum Act 1923</i> are automatically registered against a replacement of that tenure under the P&G Act.</p> <p>The carry-over of dealings to higher forms of tenure may not be appropriate as these are granted for a completely different purpose, entitlements, area and potentially different holders.</p> <p>There is no assessment of associated agreements as registrations of these are solely a service to industry and at their discretion. The department does not have an issue with associated agreements carrying over, if that is the wish of the broader resources industry.</p>
		27(3)	Dealings, caveats and associated agreements - Consent to caveat	Only holders of a relevant share of a resource authority should need to consent to a caveat over only their share, not all holders.	<p>Requiring the consent of all holders to register a caveat is the current requirement under each resource Act and the Bill maintains the status quo. This dates from the caveat provisions that were previously only available for the mineral and coal sector, prior to the standardised framework being implemented for all resource authorities in 2013. Requiring this broad consent ensures all holders collaborate in the management of their authority.</p> <p>Ultimately, the caveat provisions are provided as a service to the resources sector and other stakeholders to protect their registered interests. If changes are proposed, consensus of all stakeholders would be appropriate.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		Chapter 7, part 3	Land access – Recording agreements on title	Where administratively onerous requirements such as registration of historical conduct and compensation agreements is contemplated, the transitional provisions need to be flexible to allow for reasonable timeframes for resources companies to do so (for instance, some proponents would be retrospectively registering over 2,000 agreements).	The department notes APPEA's interest in flexible arrangements in respect to the transitional provisions under Chapter 7, part 3 of the Bill. The department will continue to liaise with peak industry bodies regarding notation requirements of existing agreements, however clause 207 provides six months from commencement of the Act for existing agreements to be noted.
		486 and 526	Dealings, caveats and associated agreements -Transfer of applications	The Bill contains no provisions for the transfer of applications other than for mining leases, contrary to proposals during consultation.	<p>The adoption of an 'application transfer' model as is currently available under the <i>Mineral Resources Act 1989</i> (MRA) for mining lease applications was contemplated. However, through the drafting process it was identified that an 'amending application' process similar to those currently in place in each of the other resources Acts is a more appropriate mechanism.</p> <p>Transfer of applications for the petroleum and gas sector is currently possible through applicable 'application amendment' provisions in the <i>Petroleum and Gas (Production and Safety) Act 2004</i> and <i>Petroleum Act 1923</i>. Clause 486 and 526 of the Bill amend the respective sections in these Acts to make this process quicker and more readily usable by the petroleum and gas sector. Currently, applications for petroleum leases where a change of applicant is required, must be approved by the Minister. As a matter of administrative efficiency, this decision is usually made when the application is being decided by the Minister, which may be some time after the application is lodged.</p> <p>Under the proposed changes in the Bill, this may now be done by the chief executive (or delegate) allowing the applicant change to be more readily effected.</p>
		18	Dealings, caveats and associated agreements – Prohibited dealings	Seek clarification that prohibited dealings do not void or prohibit commercial arrangements.	<p>The transfer of legal ownership of a divided part of a resource authority area is currently prohibited under the dealings provisions in each of the resources Acts and this policy is proposed to continue under clause 18 of this Bill. However, as clarified in the Explanatory Notes, any commercial agreement or transaction that does not transfer legal ownership is not prohibited. To transfer legal ownership, the Minister would need to approve the transfer and the change in ownership recorded on the register. If the transaction or commercial agreement does not attempt to do this for the area, then it is not prohibited.</p> <p>Other than sentence structure, clause 18 uses the same language as the existing sections of the resources Acts. For example, section 570 of the <i>Petroleum and Gas (Production and Safety) Act 2004</i> reads: "The following dealings with a petroleum</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA				<p>authority are prohibited—...a dealing...that transfers a divided part of the area of a petroleum tenure..." In contrast, clause 18 reads: "The following dealings are prohibited—a dealing with a resource authority that transfers a divided part of the authorised area for the resource authority..."</p> <p>Notably, under section 103 and 169 of the <i>Petroleum and Gas (Production and Safety) Act 2004</i> a holder can apply to divide petroleum tenure into 2 or more tenures with another person as the registered holder for the divided area.</p>
		25(2)	Dealings, caveats and associated agreements -Receipt of caveats	Notification of caveats should be triggered on 'lodgement' not 'receipt'.	APPEA correctly pointed out that 'receipt' was not the right trigger in the context of the consultation draft which proposed that the caveator would notify other registered interests at this point. Now that the status quo of the chief executive undertaking this function is retained in the Bill, the word 'receipt' remains the correct trigger.
		27	Dealings, caveats and associated agreements -Caveats over own interest	A holder should only be able to register a lapsing caveat over their interest.	This is a commercial matter for the holders. Consent of all holders is needed to lodge a consent caveat that can be either indefinite or for a defined period. If holders have concerns about this issue, they should not consent to an indefinite caveat; otherwise a non-consent caveat only lasts for 3 months.
		40 and 43(1)	Land access - Drafting error	<p>The drafting of section 43(1) of the Bill suggests that all of the relevant owners and occupiers must have the same type of agreement. It does not accommodate owners and occupiers holding different types of agreements.</p> <p>This issue could be addressed through a simple drafting amendment.</p>	<p>The policy intent for this requirement is that the resource authority holder has an appropriate arrangement in place with each owner and occupier, prior to accessing the land to undertake advanced activities. The provision should provide flexibility to accommodate the preference of each individual owner and occupier and not force them into agreeing to a single agreement or type of agreement.</p> <p>The Explanatory Notes to the Bill clarifies this policy intent. However the department will take the recommendation under consideration.</p>
		45	Land access - Right to 'opt-out'	APPEA seek clarification on whether opt-out agreements must be in writing, and whether they are to be binding on successors.	<p>The department can clarify that clause 45(2) prescribed requirements will require opt-out agreements to be in writing, in addition to the key criteria outlined in the Land Access Implementation Report (LAIC) (recommendation 4.2).</p> <p>The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.</p>
48	Land access - Oral access agreements	The Bill does not expressly provide for the parties to agree to extend the 20-business day period after which the owner or	While there is no express provision in the Bill for the parties to extend the period beyond 20-business days, the Bill does not exclude the parties from negotiating		

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>occupier is deemed to have refused to make an access agreement.</p> <p>Suggest adding a provision to expressly provide for an extension to be made.</p>	<p>and agreeing to an extended period. This provision merely establishes that the 20-business day period is the minimum requirement before the matter can be escalated to the Land Court. After the 20-business days if agreement cannot be reached, either party may make an application to the Land Court for the matter to be heard.</p>
		53(3) and 97(3)	Land access - 'Court-made' agreements	<p>The Land Court has jurisdiction to make or vary an access agreement and a CCA "because of a material change in circumstances".</p> <p>APPEA suggests adding further clarity to the Bill by defining or providing examples of what a "material change" may be.</p>	<p>The Bill does not define "material change" to ensure that the application of the provision is not inadvertently narrowed. The <i>Petroleum and Gas (Production and Safety) Act 2004</i> provides the example of a material change in circumstances as being a significant increase or decrease in the extent of a notifiable road use. There are existing legal precedents defining "material change" that can be used to provide guidance for the parties and the Land Court, where required.</p>
		55	Land access - Access in relation to land outside of the authorised area for rehabilitation	<p>APPEA suggests the Bill be amended to authorise post-tenure access for rehabilitation and post-tenure access.</p>	<p>This provision has been migrated across from the existing resources Acts and maintains the status quo. It provides access to land under a resource authority for environmental management and rehabilitation. The point raised is acknowledged however any amendment of this provision should not be undertaken without a review of the broader tenure management and environmental licencing framework.</p>
		76(2)	Land access – Access if second authority is not a lease	<p>Clause 76 provides for access to land by a resource authority holder within a second resource authority holder's tenure area (where that tenure is not a lease) without consent. Clause 76(2) states that the access right may only be exercised by the first resource authority holder where 'its exercise does not adversely affect the carrying out of an authorised activity, or proposed authorised activity, for the second resource authority' (emphasis added).</p> <p>The meaning of 'proposed authorised activity' is unclear and has the potential to mean future authorised activities that have not even been authorised yet. Clarification may be achieved by omitting the reference to 'proposed authorised activity' from clause 76(2) and adding a clause 76(3) similar to that contained at the existing section 530(3) of the P&G Act:</p> <p>"Subsection (2) applies whether or not the authorised activity has already started"</p>	<p>It was not the intention of the MQRA Program to amend these provisions. The change appears to be an inadvertent amendment arising from the drafting style adopted by the Bill.</p> <p>The department will take the recommendation under consideration.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA	78	Land access - Notification to new owners/occupiers	<p>The Bill requires an authority holder to notify a new owner or occupier, within 15 days of becoming aware of the change, of any notice or waivers that are in place regarding the entry to the land.</p> <p>APPEA suggests that this requirement be removed and that the requirement be the responsibility of the outgoing owner or occupier to advise the incoming owner or occupier.</p>	<p>The clause maintains the status quo for this requirement that is currently within each of the resources Acts and therefore is not an increase in regulatory burden. Nothing in this clause obligates the holder of the authority to actively monitor changes in ownership or occupancy.</p> <p>The intent of the clause is that if the holder becomes aware, and this may occur if the new or previous owner or occupier chooses to notify the holder, then the holder has 15 business days (~3 weeks) to give a copy of the entry notice or waiver to the new owner or occupier. This allows the new owner or occupier to be aware of existing circumstances related to entry or waiver of entry if the previous owner has neglected to pass on these details.</p>
		80	Land access - General liability to compensate	There has been no change in the definition of compensatable effect.	<p>Clause 80(4) provides a list of categories of effect for which compensation may be claimed. This provision has been migrated across from the existing resources Acts and maintains the status quo.</p> <p>The Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation.</p>
		90 and 207	Land access - Agreements to be recorded on titles	<p>Suggest clarity should be provided to indicate that a single notice can be provided to the registrar to remove multiple CCA/opt-out records that relate to that tenure when the tenure ends.</p> <p>Clarity is sought on how clause 90(3) will apply where the ending of an agreement is the subject of a dispute.</p>	<p>The Department is investigating the possibility of enabling a single notice to be lodged with the Titles Registry containing multiple agreements; allowing multiple notations or removal of notations upon title to occur.</p> <p>Clause 90(3) requires a resource authority holder to give the titles registrar, within 28 days of the agreement ending, the necessary notice. All agreements will be required to stipulate within their conditions the period for which the agreement will have effect. If a dispute arises over the termination of the agreement, general avenues of contract dispute resolution such as mediation, arbitration and litigation will apply and resource authority holders, if required, will be able to remove the particulars on the title within 28 days of resolution of the dispute.</p>
		207	Land access – Transitional provisions	The transitional provisions provide that 'continuing agreements' (being past conduct and compensation	The purpose of the LAIC Recommendation 3.1 requiring CCAs to be noted on title was to ensure that a prospective purchaser of a property is made aware that a

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			for agreements	<p>agreements in force immediately before commencement) must comply with the registration requirements within 6 months of commencement. APPEA submits that, at the very least, the transitional provisions should allow for existing conduct and compensation agreements to remain unregistered.</p> <p>Neither the Bill nor the Explanatory Notes consider how clause 90(3) will operate if the parties to a CCA are in dispute about whether an agreement has ended/ been terminated. APPEA seeks clarification on this matter.</p>	<p>CCA exists and can investigate the terms and conditions that may apply to them as a future owner. This recommendation was developed by peak agricultural and industry representatives on the LAIC and originated due to stakeholder concerns about the potential for a property to change hands without a purchaser's knowledge that an agreement exists. To deliver certainty to prospective purchasers and give full effect to the LAIC recommendation, existing conduct and compensation agreements will be required to be noted upon title to eliminate this risk.</p> <p>See response to clause 90(3) as provided above.</p>
		207-209, 214	Land access - Transitional provisions	<p>APPEA is seeking clarification on the meaning of the phrase "being negotiated" as it relates to the transitional provisions for agreements that have commenced the process but have not been finalised prior to the commencement of the Act.</p>	<p>The purpose of these transitional provisions is to ensure that where an agreement has been entered or the process has been commenced under the existing resources Acts, that the parties are not required to re-start the process when the new Act commences. Most of the agreements that APPEA have noted, have a first step in an Act which indicates when the process has been commenced. For example, a notice of intention to negotiate is required to initiate the legislative CCA and deferral agreement processes. This is a practical point to indicate that an agreement is being formally negotiated.</p> <p>For the other agreement types, that generally relate to public land, other evidentiary aides can be utilised, such as proof of emails, correspondence and other records of discussions, to determine if the process has been commenced and therefore is "being negotiated" when the Act commences.</p>
		68	Restricted land – Primary dwellings	<p>Requests clarification as to what constitutes a 'primary dwelling' as being a residence for a registered owner.</p>	<p>The intent of this provision is that restricted land would apply to a residence that is the main dwelling for the occupants. It is not intended to include houses that are permanently unoccupied or used on a temporary basis.</p> <p>It is not uncommon for houses located on large properties that are owned by another member of the family to be used as the primary residence without formal arrangements. It would also exclude tenants renting a house.</p> <p>The proposed definition of residence as a primary dwelling is narrower than the existing relevant definitions for the 600 metre rule that a residence is only qualified by it being 'occupied' and for the existing restricted land framework for the mineral and coal sector, it is a permanent building used mainly as accommodation.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		68	Definition of 'restricted land'	<p>Clause 68 of the Bill defines 'restricted land'. There are a number of terms used in this definition that are problematic:</p> <ul style="list-style-type: none"> (i) it is unclear what constitutes a 'place of worship' – it is defined very broadly in clause 68(3) to include any permanent building "used for public religious activities of a religious association (including charitable, educational and social activities"; (ii) it is unclear what constitutes an 'area' used for a school/ cemetery/ aquaculture etc; (iii) it remains unclear what constitutes a 'building used for a business or other purpose' – although we note that such a building is only 'restricted land' to the extent that it is "reasonably considered that the building cannot be easily relocated; and the building cannot co-exist with authorised activities"; and (iv) it is unclear in what circumstances a building will be considered to be 'easily relocated' or not; (v) it is unclear what the purpose of clause 68(1)(b) is – ie. restricted land "does not include land within a prescribed distance of a building or area prescribed by regulation". 	<p>Under clause 68(1) of the Bill, the proposed definition of restricted land includes, among other things, a permanent building used as a place of worship. The inclusion of places of worship under clause 68 maintains the this type of permanent building as provided under the existing restricted land frameworks of the <i>Mineral Resources Act 1989</i> (MRA) and the <i>Geothermal Energy Act 2010</i> (GEA). Clause 68(3) provides further definition of 'place of worship' than is currently provided under either the MRA or GEA. The proposed definition in the Bill is intended to provide some clarification on the broad definition that exists under the current MRA and GEA frameworks. The definition would not include private, non-permanent structures not considered a building that would not be ordinarily accessible by members of a particular religious association.</p> <p>The area for a school, cemetery or intensive farming, is the actual land upon which the use is being undertaken. For example, for schools, it would include the boundary of the school including playgrounds and sports fields; for a cemetery, it would include the designated land to be used for burials. This information would be readily available through property boundary and survey information. For intensive farming and aquaculture, the thresholds described in schedule 2 of the <i>Environmental Protection Regulation 2008</i> to which the provision in dependent, provides relevant descriptions for example, for aquaculture this is related to an 'enclosure', this is further defined as a cage, pond or tank.</p> <p>For a building used for business or other purpose, this is only considered restricted land if it is reasonably considered the building cannot be easily relocated and cannot co-exist with the proposed resource activity. This is intended to provide an outcome based test to determine if restricted land applies that provides flexibility to deal with individual cases. While there may be issues resolving whether restricted land applies in some circumstances, particularly in the early stages of implementation of this framework, it is expected this will abate over time. This includes the efficiency of the Land Court in making these declarations and the potential use of the regulations to clarify issues.</p> <p>Clause 68(1)(b) allows the regulations to prescribe a type of building or area that is excluded from restricted land.</p> <p>To resolve any difficulties that may arise in determining restricted land, clause 72 proposes a process where the Land Court can make a determination whether particular land is restricted land. Regulation making powers are also proposed to adapt to circumstances as they evolve.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA	68	Restricted land - Building that can 'co-exist' with authorised activities	Neither the Bill nor the Explanatory Notes include examples of buildings that cannot co-exist with authorised activities.	<p>It would be impractical to have a comprehensive list of buildings that cannot co-exist with authorised activities as this would depend on the circumstances of the case, e.g. nature of the business or purpose the building is used for, and the activities proposed and whether it can be easily relocated and cannot co-exist etc.</p> <p>Under the existing restricted land framework for the mineral and coal sector, all permanent buildings used for business purposes trigger restricted land. Notably under this Bill, this will not be the case. This aligns with an outcomes based framework that provides flexibility to deal with individual cases.</p> <p>The Explanatory Notes provide some examples of buildings for business purposes that would likely generate restricted land including a veterinary practice or retail premises. Examples are also provided of buildings that would unlikely generate restricted land including a pump shed, hayshed or a roadside stall.</p> <p>There will be consultation on the draft regulation where this can be considered.</p>
		70	Restricted land - 'Owner' and 'occupier' consent	<p>Clause 70 of the Bill contains the general provision that a person must not enter restricted land to carry out activities for a resource authority unless each "relevant owner and occupier" has given consent. APPEA suggested that the definition of occupier be restricted to someone who has a 'registered lease to occupy a primary dwelling'.</p> <p>Clause 69 of the Bill defines what is a 'relevant owner or occupier' but to obtain a complete understanding it is necessary to refer to clause 12 and Schedule 1 of the Bill for the definitions of the stand-alone terms 'owner' and 'occupier'.</p> <p>The definitions for these terms have not changed in substance from those currently provided under the P&G Act. Relevantly, an 'occupier' is not simply a person who has a registered lease, but:</p> <ul style="list-style-type: none"> • "any person who under an Act or a registered lease has a right to occupy the place (other than under a resource authority)"; and • "any person who has been given a right to occupy the place by an owner or another person 	<p>Occupiers have been included in the restricted land framework as it is not uncommon for houses located on large properties that are owned by another member of the family to be used as the primary residence without formal arrangements. Other occupiers would include tenants renting a house or a lessee of a business premises.</p> <p>A distance of 200 metres has been consulted on as a potential range for restricted land to apply. Any occupiers that have a right to occupy within such a relatively small distance should be readily identifiable in consultation with the owners.</p> <p>The intent of this provision is that restricted land would apply to a residence that is the main dwelling for the occupants. It is not intended to include houses that are permanently unoccupied or used on a temporary basis.</p> <p>The proposed definition of residence as a primary dwelling is narrower than the existing relevant definitions for the 600 metre rule that a residence is only qualified by it being 'occupied' and for the existing restricted land framework for the mineral and coal sector, it is a permanent building used mainly as accommodation.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA			<p>mentioned in paragraph (a)."</p> <p>The term 'right to occupy', used in the definition of 'occupier', is clearly extremely broad and has the potential to not only include leaseholders and persons holding a permit to occupy, but also bare licencees and other persons not located on any public record.</p> <p>Under the current 'restricted land' provisions contained in the Mineral Resources Act 1989 (Qld), consent must only be obtained from 'owners', and not 'occupiers'. The extension of the consent requirement to 'occupiers' is concerning as it creates a very broad class of persons from whom restricted land consents must be obtained.</p> <p>APPEA would like clarity in particular as to what constitutes a 'primary dwelling' to being a residence for a registered owner and an occupier must have a registered lease to occupy a primary dwelling.</p>	
		67	Restricted land - Exemptions	<p>Why has APPEA's suggested exemptions to restricted land (e.g. ponds, access tracks, vents and drains) not been included?</p>	<p>As per the Explanatory Notes, the exemption for underground cables and pipelines does not include ancillary surface infrastructure. The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. It is important to note that the exemptions only become relevant where the resource company is unable to reach agreement with the landholder to undertake the activities and the resource company is of the view that the activity in that area is critical to the operation. Allowing some of these activities within restricted land without landholder consent could result in landholders facing ongoing surface impacts and would lessen their certainty for activities within these areas.</p> <p>The department is considering other options to ensure a landholder does not inadvertently prevent access to the entire property by exercising their right to withhold consent for using access tracks within restricted land. This may include an amendment to the Land Access Code.</p>
		67	Restricted land - Exemptions	<p>Clarification is sought as to what constitutes the commencement of the 30 days that applies to the exemption to install pipelines.</p>	<p>This aspect of the restricted land framework is to minimise surface impacts on landholders while recognising that in some areas, underground pipelines and cables may be best suited to be installed in corridors that can be in relatively close proximity to buildings. The main impact relating to the underground cable or</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					pipeline on the landholder is the excavation, installation and backfilling of the trench. This would need to be completed within 30 days. Other related activities suggested by APPEA such as surveying and remediation could be considered to be prescribed under the Regulation for clarity.
		70	Restricted land - Accessing land off tenure	There is no provision in the Bill to allow resource companies to access properties off tenure to determine the existence of restricted land.	<p>It was not considered necessary to introduce a statutory right to enter land and an associated framework to provide for this access, particularly when the mineral and coal sector currently operate under a restricted land framework without such a right.</p> <p>A range of options are available to determine the existence of infrastructure that may generate restricted land within 200 metres from an authority boundary. This could include satellite or aerial images, observations made from within the resource authority area and talking to neighbouring landowners where good relations exist.</p>
		68	Restricted land – Point when it applies	It is preferable that restricted land applies at the date the resource authority application is lodged, rather than when granted.	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity. There are advantages and disadvantages of when restricted land should apply.</p> <p>The current restricted land framework for the mineral and coal sector is inconsistent. For mineral development licences, mining claims and mining leases, restricted land applies from the time the application is lodged. For mining claims and leases, restricted land is excluded from the grant if consent from the owner is not received before the last objection day.</p> <p>However, for exploration permits restricted land applies at any time. The same is true for the restricted land framework for geothermal tenures and the petroleum and gas sector with respect to the 600 metre rule.</p> <p>While it is possible that a building (other than a residence) may be constructed between the time an application is lodged and when it is granted, it still needs to satisfy the criteria for being restricted land (i.e. cannot co-exist and not be easily relocated). Any attempt to quickly construct a building to impede the applicant's proposal would need to meet these criteria.</p> <p>A landholder may have legitimate construction underway or planned when an application for a resource authority is lodged. As they have no ability to predict the lodgement of an application, in this case it would be reasonable for the landholder</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					to have an opportunity to complete their intentions. For petroleum and gas operations, unlike a mineral or coal mine, the exact location of infrastructure is not as critical. This together with the likelihood of a landholder purposely going to the expense of creating restricted land successfully (to impede the applicant), the risk of this provision causing serious issues should be low.
		67	Restricted land - 'Prescribed activity'	Clause 67 of the Bill defines 'prescribed activities' that cannot be carried out within restricted land without owner or occupier consent. 'Prescribed activity is defined to include activity carried out "below the surface of the land in a way that is likely to cause an impact on the surface of the land". It is not clear what 'likely to cause' encompasses in the context of this provision. A list of specific activities which are exempted should be included in the regulation.	There will be consultation on the draft regulation where this can be considered.
		72	Restricted land - Declaration about restricted land	Clause 72 of the Bill allows an owner, occupier or holder of a resource authority to apply to the Land Court to make a declaration about whether land is restricted land. The practicality of proponents utilising this process – which is potentially costly and is not subject to any timeframes – is questionable. The process also has the potential to delay a proponent from commencing activities.	In the majority of cases resource companies and landholders will be able to agree on the application of restricted land to particular infrastructure; however it is valuable to have an independent body to review and resolve disagreements so that an outcome can be determined one way or another. While there may be issues resolving whether restricted land applies, particularly in the early stages of implementation of this framework, it is expected this will abate over time. This includes the efficiency of the Land Court in making these declarations and the potential use of the regulations to clarify issues.
		175	Definition - Deciding authority	The term 'entity' is generally not used in legislation, 'person' is recommended.	Entity is defined under the <i>Acts Interpretation Act 1954</i> as a person and an unincorporated body.
		178(2)	Application has no effect	The deciding authority should only be able to consider the requirements for making an application to allow it to proceed as substantially compliant, not whether it is type of application that cannot be made.	Section 179(b) states that substantial compliance may only be considered for matters under section 177(1)(b) to (d). These do not include whether the application can be made or not, therefore an application that is prescribed that cannot be made, will not be able to proceed as substantially compliant.
		Chapter 9, part 3 – division 3 part 4 – division 6	Legacy boreholes - Clarity as to basis of authorisation for remediation action by	APPEA comment/recommendation: An additional section should be added... to state that if a person has an authorisation under s.294B, even if those remediation activities are being done in the area of a tenement held by that person, the remediation activities are taken to be carried	It is noted that a tenure holder may choose to initiate remediation of a legacy borehole located on their tenure as an authorised activity. If this occurs, the activity will be subject to existing access, notification, conduct and compensation negotiation, and environmental requirements that apply to authorised activities. The provision for the State to authorise a person applies to a much broader scope of

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA	part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	tenure holder	<p>out only under the s.294B authorisation and not as an authorised activity for the tenement."</p> <p>The Bill does not include any provisions to this effect. As a result persons acting under a section 294B authorisation in the area of their own tenure do potentially suffer from a lack of clarity as to whether they will benefit from the protections granted to section 294B authorisation holders, or whether their actions will simply constitute 'authorised activities' for the tenure.</p>	<p>scenarios, including where there is no tenure. It is possible for an authorisation to be granted to a tenure holder to remediate a legacy borehole located on their tenure. The process for authorisation including the required notification to the landowner/occupier will state the remediation work is being done as a s.294B authorisation. The authorisation will state the scope of work and what limitations or conditions apply to the works. Any action outside the scope of the authorisation would not be part of the s.294B authority and would fall under "authorised activity". The purpose of the amendments is to ensure action can be taken to deal with legacy boreholes that present a safety concern. Section 294B authorisations provide for this wherever the borehole is located and independent of the reason it was drilled. An authorisation would be granted to a tenure holder so that emergency access, notification and environmental requirements can apply to ensure an immediate response.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy boreholes - Consent of an overlapping tenement holder to conduct remediation of a legacy borehole	<p>APPEA comment/recommendation: It might be the case that a tenement holder requires the consent of an overlapping tenement holder in order to conduct remediation of a legacy borehole.... [This] may deter parties from undertaking remediation as an "authorised activity" under a tenement where consent of an overlapping tenements holder is required. [Recommend:] Possible clarification in the Protocol about remediation on overlapping tenures."</p> <p>The Bill does not include any provisions to this effect. The likely effect of this (together with the fact that a company remediating a legacy bore as an "authorised activity" does not have indemnity protection, and is subject to the usual environmental and land access obligations) is that a companies will seek section 294B authorisation before undertaking any remediation as an "authorised activity".</p>	<p>It is intended to revise the Protocol following passage of the amendments. Given the State's interest in maximising resources production, it is imperative there be discussions between overlapping tenure holders about authorised activities that may affect the other's operations. The amendments including the provision to facilitate remediation of boreholes as an authorised activity by tenure holders have been drafted with the intent of not increasing burden or obligation on industry. It is understood that in some cases, there will not be any benefit, capacity or capability by tenure holders to voluntarily remediate legacy boreholes.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 –	Legacy boreholes - Legacy borehole definition	<p>APPEA comment/recommendation: In all of the Acts except the P&G Act, the "Legacy Borehole" definition includes the words "reasonably believes". However, in the P&G Act definition, those words are omitted and are instead used in sections 23 and 24 of the Bill. The definition of "Legacy Borehole" should be changed so that the use of the terminology is consistent across all Acts."</p>	<p>This is a legislative drafting matter and the legislative effect is identical across the resources Acts. The definition is structured differently because the P&G Act includes the amendment for State authorisation as well as an amendment for authorised activity. In the other resources Acts, only the authorised activity amendment has been included. If the "reasonably believe" element were to be added to the definition in the P&G Act – the definition would also need to distinguish who is to reasonably believe for each legacy borehole provision – i.e. the Chief Executive in relation to the State authorisation under s.294B and the</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		division 7 part 9 – division 6 part 10 – division 7			holder of tenure under for the amendments to s.32 and s.109. The department could also authorise the overlapping tenure holder to assist/ensure all necessary agreements/systems are in place to support the remediation activities.
		Chapter 4	Overlapping tenure - Compensation or costs of replacement are to be assessed based on principles to be set out in the regulations	Definitive positions/comments cannot be made on how the Bill provisions adopt the principles of the White Paper on compensation for lost CSG production, replacement of major PL major gas infrastructure, replacement of PL minor gas infrastructure, severing of PL connecting infrastructure and ATP major gas infrastructure, as the compensation or costs of replacement are to be assessed based on principles to be set out in the regulations. It remains to be seen to what extent the regulations will reflect the principles in the White Paper. The hierarchy of compensation methods has not been reflected in the Bill.	The department notes APPEA's concern regarding the hierarchy of compensation methods. It was the department's intention that the hierarchy of compensation methods be included in the regulation. In response to industry's concerns, the department is investigating options to clearly show the hierarchy of preferences (i.e. mitigation of loss, replacement gas and financial compensation).
		162	Overlapping tenure - Replacement CSG	The concept of a PL holder having to provide replacement CSG to an Mining Lease (ML) holder as a reconciliation payment for later recovered CSG for which the PL holder had been compensated, has been introduced at section 162(2) (b). APPEA is unclear on how the provision of replacement CSG works in this context. It is not mentioned in the White Paper. It may be a misapplication of the concept of the ML holder providing compensation for lost CSG production through providing replacement gas.	The department notes APPEA's concern regarding that reconciliation payments to an ML holder may be through replacement gas. However, the final Technical Working Group paper on compensation provides that a form of reconciliation payment that a PL holder may make to an ML holder is replacement gas. Clause 162 has been drafted to reflect this industry agreed position.
		221-223	Overlapping tenure - Exploration activities over a production tenement for the other resource	The Bill at sections 221 and 223 does continue the existing restrictions on exploration activities over a production tenement for the other resource. That is the written consent of the production tenure holder must be obtained. This seems appropriate. However, sections 221 and 222 are meant to ensure that granted PLs and MLs that exist at the commencement of the new regime should not be subject to the new regime at all, and should continue to be governed by the old regime. This should be clearly stated in those sections as the current wording is vague such that it is not	The department agrees with the comments made by APPEA in its submission and is working to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA			clear that new Mining Leas Application (MLAs) made from Exploration Permit for Coal (EPCs) and Mineral Development License (MDLs) over existing PLs and new PLAs that are made over existing MLs are to be dealt with under the old provisions.	
		Chapter 4	Overlapping tenure - Restriction on activities under a PL being carried out on land overlapping an already granted EPC or MDL	There is still a restriction on activities under a PL being carried out on land overlapping an already granted EPC or MDL. The PL activities can only be carried out if there is no adverse effect on already commenced coal exploration activities. APPEA does not believe this was intended by the White Paper. Further there is the possible anomaly in the case of already granted PLs overlapping EPCs and MDLs that after the commencement of the Bill the EPC and MDL holder will still require the written consent of the PL holder to conduct activities within the overlap area.	The department agrees with APPEA's comment that the Adverse Effects Test approach in clause 145, so far as it applies to a PL, is inconsistent with the White Paper. The department is investigating options to resolve the matter.
		Chapter 4	Overlapping tenure - Land access for overlapping production tenures where a production tenure holder (or a related entity) owns the underlying land.	Land access has only been partly addressed with respect to the overlap of an ATP with an ML – section 146. There are no provisions dealing with land access for overlapping production tenures where a production tenure holder (or a related entity) owns the underlying land.	The department agrees with APPEA's comment. The department is investigating options to apply the expedited land access provision to both an ATP holder and PL holder.
		231-233	Overlapping tenure - Transitional provisions at sections 231 to 233 for Surat Basin area petroleum leases	The transitional provisions at sections 231 to 233 for Surat Basin area petroleum leases may not work as effectively as intended by the White Paper. As the sections of the Bill are currently worded the 16 year (non-reducible) delay for commencement of mining does not apply to a mining lease applied for but granted after the commencement of the new provisions and does not apply to a PL granted before the commencement. In the former case the holder of the ML granted after the commencement could give an 11 year notice of commencement of mining in the Surat Basin area and shorten that time (subject to compensation) by an acceleration notice.	<p>These particular transitional arrangements reflect the advice given to industry via correspondence dated 26 November 2013.</p> <p>The department agrees that the intent was that the parties can agree to a mining commencement date that is different to the statutory minimum. The department is investigating options to clarify the application of the division and the ability of the parties to agree to an agreed mining commencement date different to that provided in section 232.</p> <p>The department understands that APPEA and the QRC are coordinating discussions with industry on this particular matter and will be providing additional advice to the department regarding possible amendments.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		124	Overlapping tenure - Ability of an ATP holder to give an exceptional circumstances notice	The ability of an ATP holder to give an exceptional circumstances notice which would bind it once it became the holder of a PL has not been included in the Bill even though it was in the working draft.	The department agrees with APPEA's comments on this matter. The department is working to resolve the matter.
		Chapter 4, part 2, division 5	Overlapping tenure - Where a PL holder is to commence production on the area of an overlapping ML	There is a potential lack of clarity of the application of chapter 4 part 2 division 5 of the Bill which addresses where a PL holder is to commence production on the area of an overlapping ML. The sections require an agreed joint development plan to be in place. The working draft provided for these matters to apply where an ATP was granted first then an ML and then a subsequent PL based on the ATP. Section 136 takes into account both where there is and where there is not an existing ATP but on the strict wording of section 102 of the Bill the sections may not apply where a PL is granted after an ML, as such a PL would not be a column 2 resource authority mentioned in the table for part 2.	The department thanks APPEA for its comments. It does appear there is an error in the current drafting of this part of the Bill. The department is working to resolve the matter.
		144 and 145	Overlapping tenure - Freedom to explore for and produce CSG outside any area of sole occupancy	The White Paper provides that the gas party should be free to explore for and produce CSG outside any area of sole occupancy (White Paper 3.2.2 and 3.3.5). The Bill provides that an ATP or PL holder could only carry out an authorised activity in an overlapping area if it does not adversely affect the authorised activity of an overlapping EPC or MDL holder. (section 145). The White Paper 3.3.5 expressly states that on production tenures, the conduct of exploration activities will be subject to a requirement that any activities which are undertaken must not adversely affect safe and efficient production activities on the overlapping production tenure. Reference to 'petroleum lease (CSG)' should not be included as Column 1 tenure under section 144. A production tenure holder must be able to undertake production activities in accordance with its development schedule and must be able to implement additional safety measures in mitigating risk to personnel and equipment to as low as reasonably practical when an explorer enters into a producing area.	The department agrees with APPEA's comment that the Adverse Effects Test approach in clause 145, so far as it applies to a PL, is inconsistent with the White Paper. The department is investigating options to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA	131	Overlapping tenure - Authorised activity in an overlapping area only if the activity is consistent with each agreed joint development plan that applies to the relevant holder	The Bill provides that a Petroleum Resource Authority (PRA) Holder and an ML holder may carry out an authorised activity in an overlapping area only if the activity is consistent with each agreed joint development plan that applies to the relevant holder (section's 131(2); 142(2)). APPEA respectfully deems that the PRA holder should be entitled to commence or continue authorised activities under the PRA unless and until there is an agreed joint development plan. Further, the White Paper contemplated that a PL holder would be free to carry out its activities in the balance of the PL/ML overlap area outside the Initial Mining Area (IMA), Rolling Mining Area (RMA) and Simultaneous Operations Zone (SOZ), but the ML holder would have the "right of way" inside the IMA and RMA and the SOZ would be subject to safety and health arrangements. Section 131 of the Bill does not make this distinction and should be amended to align with the White Paper.	<p>It is a condition of all resource authorities that the holders have and comply with the relevant work program or development plan when carrying out authorised activities in the area of the authority. The department does not consider that clause 131(2) limits the rights of an ATP or PL holder to undertake authorised activities outside the area of an IMA, RMA or SOZ, provided these authorised activities undertaken by the ATP or PL holder are consistent with the agreed joint development plan.</p> <p>Section 131(2) does not affect the right of an ATP or PL holder to continue to carry the authorised activities for the petroleum resource authority under their work program or development plan until such time that an agreed joint development plan is lodged. Only once the agreed joint development plan is in place (i.e. agreed to and lodged under section 127) is the ATP or PL holder obligated to comply with the agreed joint development plan under section 131(2).</p> <p>The provisions in question have no impact on the agreed industry position that the PL holder may undertake authorised activities outside the area of the IMA, RMA or SOZ (safety and health obligations applying).</p> <p>The same applies to the ML holder under clause 142(2) of the Bill.</p>
		126	Overlapping tenure - Indefinite period to carry out rehabilitation	Section 126 (4) of the Bill allows the ML holder to occupy an IMA or RMA for an indefinite period to carry out rehabilitation. This occupancy could result in the PL/ATP holder being unable to enter the area to carry out activities until the rehabilitation is completed. A definite date for the ML holder to abandon an IMA or RMA should be stated.	The department notes APPEA's concerns with the clause. However, the proposed legislative amendments in the Bill have been developed to meet the agreed position as provided in the White Paper, which does not provide for a statutory abandonment date.
		Chapter 4	Overlapping tenure - Basic property rights to gas reside with the holder of the petroleum tenement	<p>The White Paper accepts that the basic property rights to gas reside with the holder of the petroleum tenement, and that in return for agreeing to a right of way for coal mining, there should be a well-defined compensatory right for the petroleum tenement holder to take any ICSG produced by the ML holder. In essence, that is a right to take gas that the petroleum tenement holder could otherwise have produced themselves but for the right of way for coal mining.</p> <p>Of fundamental importance to this trade-off is a requirement that the ICSG be produced by the ML holder in a form aligned with the requirements of the petroleum tenement</p>	The department agrees with APPEA's comments. The department will continue to work closely with APPEA and other key external stakeholders during the development of the regulation relating to this matter to ensure it reflects the intent of the White Paper and remains relevant.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>holder, and then offered on terms that could reasonably be accepted (a "reasonable offer"). It follows that the ML holder's right to commercialise ICSG should only arise when a reasonable offer has been rejected and further, that compensation liabilities are offset only when a reasonable offer has been rejected.</p> <p>The production and offer requirements for ICSG therefore have a flow-on effect from Division 4 of the Bill dealing with ICSG to Division 3 dealing with compensation and dispute resolution, and to the MRA amendments dealing with the commercialisation of ICSG. It is therefore important that the requirements for ICSG production in overlaps and for an offer of the ICSG to be valid and reasonable are clearly enshrined in the legislation itself.</p>	
		<p>Chapter 4 Chapter 7, part 4</p>	<p>Overlapping tenure - Main purpose</p> <p>Savings and transitional provisions – Grandfathering of existing arrangements</p> <p>Bespoke arrangements</p>	<p>The Bill does not address the continuation or application of existing agreements or generally acknowledge the ability of the tenure holders to agree to alternative arrangements.</p> <p>One of the foundation principles of the White Paper for the proposed legislative framework is flexibility for parties to negotiate bespoke agreements as an alternative to the legislative default.</p> <p>Whilst the MERCP Bill provides for certainty and predictable conduct, the White Paper acknowledges the rights of parties to come to alternative arrangements where opportunities for further cooperation exist.</p> <p>This principle includes recognition that existing agreed co-development arrangements are already in place and do not fall under the Bill unless both parties agree to opt into the legislative default framework described under chapter 4.</p> <p>The Bill must therefore recognise that the terms of an existing joint development plan may override the legislative position unless the Minister decides otherwise in accordance with s150 of the Bill.</p> <p>Although section 100 (2)(e) states that the main purposes of</p>	<p>The new overlapping tenure framework will have no impact on existing statutory agreements (i.e. coordination arrangements) that have been approved by the Minister and are the relevant arrangement to overlapping production resource authorities under the existing framework. The existing framework provided in the <i>Mineral Resources Act 1989</i> and the <i>Petroleum and Gas (Production & Safety) Act 2004</i> will continue to apply to a coordination arrangement in this scenario.</p> <p>The Bill as drafted does currently contain some flexibility for the parties to agree to arrangements that differ to that provided in the statutory framework. For example clause 114(2) provides the ability to agree to a mining commencement date that is different from the ones provided for in the relevant clauses of chapter 4 and chapter 7. However, the department is continuing to work with industry to ensure that the new overlapping tenure framework provides some flexibility for the parties to, in certain circumstances, enter into alternative arrangements to those established in the framework. The department is investigating options to make clearer that the parties may agree to alternative arrangements to those prescribed in the new overlapping tenure framework, except to the extent of certain prescribed aspects which are required for the State to discharge its custodian obligations.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				chapter 4 are achieved amongst other ways, by providing for participants in each of the industries to negotiate arrangements as an alternative to particular legislative requirements, the operative provisions of the chapter do not acknowledge this ability or purport to preserve existing arrangements between participants.	
		N/A	Overlapping tenure - ATP holder's relinquishment obligations and work program conditions	<p>Chapter 4 of the Bill does not deal with the impact of the new overlapping tenure regime on relinquishment and work program obligations of the ATP holder. (Chapter 4)</p> <p>Recent amendments to the <i>Petroleum and Gas (Production and Safety) Act 2004</i> by the <i>Land and Other Legislation Amendment Act 2014</i> were not designed to address necessary amendments to work programs due to sole occupancy under a mining lease.</p> <p>The White Paper describes that an ATP holder is to be relieved from relinquishment obligations and work program conditions to the extent of any area the subject of sole occupancy by the ML holder.</p>	The department understands that the recent amendments to the <i>Petroleum and Gas (Production and Safety) Act 2004</i> relating to relinquishment for ATPs granted under the Act have been drafted in a manner so that they will apply to the new overlapping framework. The department will clarify this prior to debate.
		124	Overlapping tenure - Exceptional circumstances notice	<p>The White Paper provides that exceptional circumstances may be claimed by an ATP holder when an ML application is made over an ATP and could be given for IMAs and RMAs with the ability to re-open a claim for areas outside the IMA or RMA, if the ML holder changes its mine plan triggering truncation. (White Paper 3.4.2)</p> <p>The Bill only allows a PL holder to give an exceptional circumstances notice in respect of an IMA.</p> <p>The Bill must also include provision for exceptional circumstance notices to apply where there are changes to an existing RMA.</p>	The department notes APPEA's concerns with the clause. However, the proposed legislative amendments in the Bill have been developed to meet the agreed position as provided in the Technical Working Group paper on the Extension of Notice Periods in Exceptional Circumstances. That is, the petroleum resource authority holder can only claim for exceptional circumstances outside the IMA where the mining commencement date is accelerated by an ML holder.
1	APPEA	Chapter 4, part 4, division 3	Overlapping tenure - Hierarchy of preferences for	<p>The White Paper sets out a hierarchy of preferences for compensation.</p> <p>The Bill does not refer to this hierarchy or the detailed</p>	The department notes APPEA's concern regarding the hierarchy of compensation methods. It was the department's intention that the hierarchy of compensation methods be included in the regulation. In response to industry's concerns, the department is investigating options to clearly show the hierarchy of preferences

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			compensation	<p>compensation principles, although there is a reference in the Bill to principles to be prescribed by regulation in relation to the minimisation of compensation liability and the calculation of compensation for lost production and replacement of infrastructure.</p> <p>Addressing the hierarchy of compensation in the regulation is not viewed as an adequate mechanism to capture this key component to minimise lost gas production to the petroleum resource holder and the State.</p> <p>The CSG party will in all likelihood need to source replacement gas to meet its contractual sales obligations. This key component to the hierarchy of preferences for compensation should be captured in the legislation and not the regulation.</p>	(i.e. mitigation of loss, replacement gas and financial compensation).
		125	Overlapping tenure - Acceleration notice	<p>The Bill does not clarify whether there is a minimum period of notice before mining can commence in an IMA/RMA where an acceleration notice is given.</p> <p>APPEA submits that such clarification should be made in the Bill.</p>	The department notes APPEA's concern regarding the minimum period of notice to commence mining when an acceleration notice is given to the petroleum resource authority holder. The maximum and minimum period of notice before mining can commence in an IMA and RMA is provided for in clause 125(3) of the Bill.
		126	Overlapping tenure - Surrender of sole occupancy following completion of mining activities and management of rehabilitation.	<p>The Bill provides that the ML holder may give an abandonment notice when it no longer requires sole occupancy for the whole or part of an IMA or RMA for an overlapping area.</p> <p>The Bill does not refer to flexible rehabilitation arrangements for successive land use.</p> <p>Sole occupancy is not exclusivity. CSG rights have the potential to resume after mining activities have concluded and overlapping rights are not extinguished. Placing an obligation on the ML holder to provide advice at a point following rehabilitation of the relevant area by the ML holder or to negotiate for CSG activities to resume at an earlier date if convenient, allows for a resumption of CSG rights under its petroleum resource authority. Therefore it is important that</p>	The department notes APPEA's concerns with the current drafting of this clause and will give it further consideration and seek further advice from the Department of the Environment and Heritage Protection on this matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>existing obligations under an environmental authority take account of the potential for secondary land use.</p> <p>The PL holder could, for example, assume the obligation for rehabilitation requirements of delineated areas and the ML holder could do likewise for the PL holder in delineated areas that are to be mined through.</p> <p>APPEA understands DNRM is considering necessary amendments in consultation with DEHP to apply to the Environmental Protection Act but is yet to see proposed amendments. APPEA would like to draw attention in this circumstance to the streamlined model conditions for petroleum activities relating to overlapping tenure administered through the Department of Environment and Heritage Protection (DEHP).</p>	
		127	Overlapping tenure - Agreed co-development plans under a Coordination Arrangement between overlapping production lease holders	<p>The White Paper recognises that agreed co-development plans under a Coordination Arrangement between overlapping production lease holders, and approved by the Minister under the Petroleum and Gas (Production and Safety) Act 2004, will remain in force unless the parties agree to opt into the new regime.</p> <p>The requirements of s127 describing the mandatory content of a joint development plan are therefore not necessarily consistent with the White Paper in respect to there being a defined IMA/RMA/SOZ concept. A bespoke joint development plan does not necessarily describe joint development using these terms or concepts.</p> <p>A bespoke joint development plan does not necessarily describe joint development using these terms or concepts.</p>	The concepts of IMA and RMA and their identification are central to the framework contained in the White Paper, and therefore the Bill, and links to parties' rights to compensation and alternative dispute resolution under the legislation. The department notes APPEA's comments regarding the need for flexibility and is investigating options to resolve the matter.
		131 and 142	Overlapping tenure - Exploration activities outside of the IMA, RMA and SOZ, undertaking activities	The Bill provides that a Petroleum Resource Authority (PRA) Holder and an ML holder may carry out an authorised activity in an overlapping area only if the activity is consistent with each agreed joint development plan that applies to the relevant holder (ss 131(2); 142(2)).	It is a condition of all resource authorities that the holders have and comply with the relevant work program or development plan when carrying out authorised activities in the area of the authority. The department does not consider that clause 131(2) limits the rights of an ATP or PL holder to undertake authorised activities outside the area of an IMA, RMA or SOZ, provided these authorised activities undertaken

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA		outside of these areas	<p>It does not take into account the agreed industry position that the PRA holder may undertake authorised activities outside the area of the IMA/RMA/SOZ at any time at its own discretion (subject to not adversely affecting safe and efficient production activities of the overlapping production tenure).</p> <p>The PRA tenure holder shall have advance notice before an IMA/RMA/SOZ takes effect and will otherwise have unfettered rights to conduct CSG-related activities on the basis that PRA tenure holders can be everywhere that ML holders are not.</p> <p>The CSG activities undertaken outside the IMA/RMA/SOZ are subject to the relevant SSM.</p> <p>Where a PL is granted after the commencement of the new provisions and subsequent to its grant, an ML is granted, then section 131(2) seems to require the PL holder to cease any activities until there is an agreed joint development plan with the ML holder as the activities under the PL would otherwise not be consistent with an agreed joint development plan.</p> <p>APPEA respectfully deems that the PRA holder should be entitled to commence or continue authorised activities under the PRA unless and until there is an agreed joint development plan.</p>	<p>by the ATP or PL holder are consistent with the agreed joint development plan.</p> <p>Section 131(2) does not affect the right of an ATP or PL holder to continue to carry the authorised activities for the petroleum resource authority under their work program or development plan until such time that an agreed joint development plan is lodged. Only once the agreed joint development plan is in place (i.e. agreed to and lodged under section 127) is the ATP or PL holder obligated to comply with the agreed joint development plan under section 131(2).</p> <p>The provisions in question have no impact on the agreed industry position that the PL holder may undertake authorised activities outside the area of the IMA, RMA or SOZ (safety and health obligations applying).</p> <p>The same applies to the ML holder under clause 142(2) of the Bill.</p>
		Chapter 4	Overlapping tenure - How ICSG was to be offered by the ML holder to the overlapping PRA holder, the ability in certain circumstances of the PRA holder to refuse, contribution by the PRA holder to extraction costs, and a	<p>Certain matters concerning what the contract for supply of ICSG must contain are to be specified in regulations. (White Paper 3.11.3)</p> <p>The petroleum tenure holder accepting the ICSG must pay the royalties under the MRA.</p>	<p>The department will continue to work closely with APPEA and other key external stakeholders during the development of the regulation to ensure the regulation reflects the intent of the White Paper and remains relevant.</p> <p>The royalty liability for incidental coal seam gas currently lies with the producer of the gas. It is not proposed that this should change.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			requirement to re-offer the ICSG on an annual basis.		
		135	Overlapping tenure - Periodic offers of Undiluted ICSG must be made	<p>Section 135 of the Bill only requires this to be done if ML holder does not use ICSG within 12 months of making the offer to the overlapping petroleum tenure holder.</p> <p>The White Paper articulates that as part of the trade-off associated with the 'right of way' principle for coal is that the ML holder must offer any ICSG produced from an area of sole occupancy (IMA and RMA) to the overlapping PRA holder at no cost other than a contribution to the costs of producing the ICSG.</p> <p>Where the PRA holder has declined its first right of refusal to the initial offered supply of undiluted ICSG, the ML holder must re-offer undiluted ICSG on an annual basis unless and until the ML holder develops a plan to use or commercialise the ICSG. (White Paper 3.11.15).</p> <p>Section 135 should include the wording 'make a reasonable' in the wording of s135 (1) to read "An ML (coal) holder must make a reasonable offer to supply...".</p> <p>The definition of 'reasonable' should be included as part of s135 to include the parameters described in the White Paper at section 3.11.3.</p>	The department notes APPEA's concerns regarding first right of refusal for incidental coal seam gas. The department is investigating options to clarify the application of this clause. The department will ensure that they continue to engage with APPEA and other industry stakeholders on the development of these operationally complex provisions of the Bill and any subsequent regulation development.
		135	Overlapping tenure - Offers for ICSG are to be made for a single transfer point and that costs beyond this transfer point are borne by the gas party	<p>The White Paper provides that offers for ICSG are to be made for a single transfer point and that costs beyond this transfer point are borne by the gas party. (White Paper 3.11.3)</p> <p>The Bill does not include this specification. Although the contract for the supply of gas must include matters prescribed by regulation.</p> <p>The contract for delivery of the ICSG would form statutory criteria (although alternative arrangements may be made). The contract of delivery will require the parties to negotiate</p>	The department will continue to work closely with APPEA and other key external stakeholders during the development of the regulation to ensure the regulation reflects the intent of the White Paper and remains relevant.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
1	APPEA			<p>for either class of ICSG to be supplied on an agreed volume, quality and deliverability basis to align with the disposal facilities provided by the PRA tenure holder.</p> <p>Any ICSG offered to the PRA holder is to be offered at a single transfer point for each class of ICSG with the cost of transferring the gas from the transfer point to be borne by the PRA holder.</p> <p>In the event the PRA holder accepts a first right of refusal offer but is unable to take the gas then the ML holder may recover the costs it subsequently incurs in disposing of such gas (including carbon costs, royalties and any essential capital investment it makes in facilities to deal specifically with this contingency).</p>	
		146	Overlapping tenure - Land access principles between an ML holder and CSG tenure holder	<p>Land access has only been partly addressed with respect to the overlapping of an ATP with a ML (section 146).</p> <p>The provisions do not deal with land access for overlapping production tenures where a production tenure holder (or a related entity) owns the underlying land.</p> <p>The Bill should be amended to reflect this.</p>	The department agrees with APPEA's comment. The department is investigating options to apply the expedited land access provision to both an ATP holder and PL holder.
		147	Overlapping tenure - Overriding obligation on both coal and CSG tenure holders to exchange relevant operational and planning information.	<p>Section 147(1) of the Bill is too wide and imprecise in respect of the information the overlapping tenure holders need to exchange. The obligation should be limited to the specific types of information in section 147(2) of the Bill (and as prescribed under the regulation).</p>	The department notes the views expressed. However, the department is concerned that if clause 147(1) is narrowed that it could have the unintended consequence of excluding a particular type or types of information that the parties consider falls within the information exchange obligation. The same rationale applies to the drafting of section 147(2).
		155	Overlapping tenure - Minor Gas Infrastructure	<p>The definition of "PL minor gas infrastructure" does not include the minor facilities associated with, and servicing, Major Gas Infrastructure, where the Major Gas Infrastructure itself does not require relocation.</p> <p>The Technical Working Group for Compensation describes the agreed position between coal and coal seam gas as</p>	The department thanks APPEA for its comments on this clause. It does appear there is an error in the current drafting of clause 155(d). The department is working to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				including "minor facilities associated with, and servicing, major gas infrastructure, where the major gas infrastructure itself does not require relocation". This is to be added to the definition of 'PL minor gas infrastructure'.	
		161	Overlapping tenure - If a CSG tenure holder does not accept Undiluted ICSG validly offered to the ML holder	<p>The White Paper provides that if a CSG tenure holder does not accept Undiluted ICSG validly offered to the ML holder, then any compensation liability of the ML holder will be reduced by the amount of Undiluted ICSG offered except to the extent that it is not practicable for the CSG tenure holder, acting reasonably, to provide ICSG off-take infrastructure capacity aligned with the offered supply. (White Paper 3.11.4)</p> <p>The Bill does not include this carve-out. Rather it simply provides that an ML holder's compensation liability to a PL holder is reduced to the extent the undiluted CSG offered to the PL is not supplied to the PL holder because the offer is not accepted.</p> <p>There may be instances where it is simply not practicable for the PRA tenure holder to provide ICSG off-take infrastructure capacity to align with the offered supply.</p> <p>Such circumstances include the ability for the PRA tenure holder to transport the ICSG for subsequent processing due to a lack of transmission infrastructure in the area and the prohibitive or uneconomic cost or timeframe necessary to construct the necessary pipeline infrastructure.</p>	The department is investigating options to clarify the current provisions in the Bill in this regard.
		162	Overlapping tenure - Reconciliation for subsequent recovery of lost production where compensation for lost gas has been previously paid	<p>Section 162 of the Bill recognises the concept of a reconciliation payment but also provides at section 162(2)(b) as an alternative ability for the PL holder to give the ML holder an amount of coal seam gas that is equal to the amount of coal seam gas recovered. This is likely not practical or preferable by either party and should be removed from the Bill.</p> <p>This is likely not practical or preferable by either party and</p>	The department notes APPEA's concern that reconciliation payments to an ML holder may be through replacement gas. However, the final Technical Working Group paper on compensation provides that a form of reconciliation payment that a PL holder may make to an ML holder is replacement gas. Clause 162 has been drafted to reflect this industry agreed position.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				should be removed from the Bill.	
		N/A	Overlapping tenure - Code of Practice for hazard minimisation	The Bill does not allude to the Code of Practice for hazard minimisation in relation to gas drainage. This may be dealt with in regulations. Even if the Code is ultimately set out in the regulations, the Code may still need to be enshrined in the Act itself to effect compliance.	As the code would refer to the safety and health component of the new overlapping tenure framework, the head of power for the code would be contained in the relevant safety and health legislation.
		Chapter 4, part 4, division 4	Overlapping tenure - Disputes under the new overlapping tenure regime would be resolved by expert determination	Need to ensure the Mine Safety Bill addresses reference of disputes on hazard minimisation or safety to arbitration.	The department notes APPEA's comments on this matter.
		Chapter 7	Overlapping tenure - Transitional Arrangements	<p>The White Paper proposed that existing production tenements and future overlapping applications would remain subject to the existing overlapping tenure regime with a right in the parties to opt-in.</p> <p>Chapter 7 Division 3 and Division 4 does not take into account the circumstance for transitional applications where lodged and consented to by the overlapping exploration tenure holder, or where the other party lost the right to seek a preference decision because it either did not have the prerequisite knowledge of its resource or it failed to comply with its obligations under sections 313 and/or 314 of the P&G Act or sections 318AW and 318AX of the MRA.</p> <p>The initial lease application must be accorded its legislative rights accrued under the P&G Act or MRA and be given priority. That is, where the overlapping exploration holder has foregone its rights the provisions described under the Bill should not apply and the lease should be granted without further reference to the overlapping exploration tenure holder.</p> <p>The exception being that the overlapping exploration tenure holder may continue to explore under its exploration tenure</p>	<p>The department notes APPEA's concern regarding the transitional provisions for production applications in the Bill. Please note that clause 227 of the Bill provides that an application for a PL that overlaps an EPC or an MDL (coal) and is undecided at the commencement of Chapter 4 will be granted under the new overlapping regime.</p> <p>The new overlapping tenure framework also allows the underlying EPC holder or MDL (coal) to continue to undertake authorised activities. It is also important to note that there is no requirement for an agreed joint development plan in these circumstances.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				where its activities do not adversely affect safe and efficient production activities on the overlapping production lease as described in the White Paper [3.3.5].	
2	Queensland Law Society (QLS)	Chapter 2	Dealings, caveats and associated agreements	Supports the harmonisation of the regulatory framework for dealings, caveats and associated agreements. Consolidation is a sensible outcome and is generally supportive of the substantive changes.	The department thanks QLS for their support of the proposed amendments.
		23	Dealings, caveats and associated agreements – Additional matters	<p>The QLS makes the following observations in respect to the issues the MERC Bill does not address and to which further consideration should be given:</p> <ul style="list-style-type: none"> Harmonisation of provisions relating to the transfer of applications for resource authorities (including to provide for the transfer of applications for mining authorities other than mining leases) as highlighted in the Industry Consultation Paper on Modernising Queensland's Resources Act Program - Dealings, Caveats and Associated Agreements dated July 2013. The lapsing of indicative Ministerial approvals for reasons beyond the resource authority holder's control (e.g. delays in other regulatory approval processes or applicable assessments for transfer duty). 	<p>The adoption of an 'application transfer' model as is currently available under the <i>Mineral Resources Act 1989</i> (MRA) for mining lease applications was contemplated. However, through the drafting process it was identified that an 'amending application' process similar to those currently in place in each of the other resources Acts is a more appropriate mechanism.</p> <p>Transfer of applications for the petroleum and gas sector is currently possible through applicable 'application amendment' provisions in the <i>Petroleum and Gas (Production and Safety) Act 2004</i> and <i>Petroleum Act 1923</i>. Clause 486 and 526 of the Bill amend the respective sections in these Acts to make this process quicker and more readily usable by the petroleum and gas sector. Currently, applications for petroleum leases where a change of applicant is required, must be approved by the Minister. As a matter of administrative efficiency, this decision is usually made when the application is being decided by the Minister, which may be some time after the application is lodged.</p> <p>Under the proposed changes in the Bill, this may now be done by the chief executive (or delegate) allowing the applicant change to be more readily effected.</p> <p>Under proposed section 23(4)(b) the period for which the indicative approval remains valid is proposed to be prescribed by regulation and can be considered during consultation in its development.</p>
		36	Land access – Making of Land Access Codes	The QLS submits that: the expression "one or more codes for all Resources Acts" (emphasis added) has the effect that it is not possible to make different land access codes for different Resources Acts. The QLS suggests the expression should be "one or more codes for all or any Resources Acts".	The intent of the land access code amendments is to instil greater flexibility to use codes for the land access framework. While the department is of the view the Bill reflects the government's policy position, the department will take the recommendation under consideration.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
2	Queensland Law Society (QLS)	38	Land access – Entry for authorised activities requires entry notice	The QLS states that: entry notices are now to be required to cross access land (section 38). The QLS queries whether this is practical given that access land generally consists of formed tracks.	It was not the intention of the program to expand the notification requirements to access land. The department will take the query under consideration.
		40	Land access – Entry notices	The QLS states that: In respect of section 40(1)(a) to (f), the Society has previously commented that the use of the word "or" after each sub-paragraph has the effect that an entry notice is required if two or more of 40(1)(a) to (f) apply. The Society suggests that in the third line of section 40(1), the word "if" be deleted and the words "if any one or more or all of the following apply."	The department considers that this clause achieves the policy intent.
		40(1)(c)	Land access – Entry notices	The QLS submits that: Reference to the Land Court 'considering' an application is unclear and should be amended to refer to when an application is made and served on the respondent.	It was not the policy intent for an application to the Land Court under the relevant section to exempt a resource authority holder from providing an entry notice to an owner or occupier. In ensuring consistent terminology has been used when consolidating the land access requirements from the resources Acts, this provision has inadvertently been added. The department will seek to rectify this drafting error.
		40	Land access – Entry notices	The QLS submits that: For section 40(3), the reference to "enforceable" suggests that "rights" can exist that are not enforceable, thus casting doubt on the meaning of the entire paragraph. The Society suggests that the words be changed to "enter land, means a right to enter the land under any law, including under a common law or equitable right, but does not include a right to enter the land under this Act or a Resources Act."	The drafting of the provision has been modernised from the existing resources Acts which only refers to a "right". This "right" is further clarified by the Bill under clause 40(3) as an "independent legal right" which is a right to enter land that is enforceable under any law, including common law right, but does not include a right to enter the land under this Act or a resource Act. A contractual arrangement is provided as an example.
		43(1)	Land access – Entry for advanced activities requires agreement	The QLS submits that: The drafting of section 43(1) of the Bill suggests that all of the relevant owners and occupiers must have the same type of agreement. It does not accommodate owners and occupiers holding different types of agreements. This issue could be addressed through a simple drafting amendment.	The policy intent for this requirement is that the resource authority holder has an appropriate arrangement in place with each owner and occupier, prior to accessing the land to undertake advanced activities. The provision should provide flexibility to accommodate the preference of each individual owner and occupier and not force them into agreeing to a single agreement or type of agreement. The Explanatory Notes to the Bill clarifies this policy intent. However the department will take the recommendation under consideration.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		43(1)	Land access - Exemption from the requirement to have a CCA	Seeks clarification on when the "Land Court" exemption applies for the need to have a conduct and compensation agreement (CCA). The Bill states that the exemption applies when the matter is being <u>considered</u> by the Land Court.	There is no intent to change the CCA exemption where a Land Court application has been lodged. The terminology used is a result of the drafting style adopted by the Bill in consolidating the land access provisions from across the resources Acts. While the clause specifically mentions that an application has been made, it is acknowledged that some may find the addition of the word 'considering' introduces some uncertainty. The department will take the comments under consideration.
		Chapter 3, part 2, division 4, subdivision 2	Land access – Access rights and access agreements	QLS recommends that access agreements should be in writing only and therefore the provision should be amended to remove the reference to oral agreements.	This provision has been migrated across from the existing resources Acts and only relates to crossing land to access the area of the resource authority, not resource activities. The ability for the agreement to be made orally or in writing ensures that there is sufficient flexibility in the framework to accommodate different access scenarios. The framework allows the parties to decide how to record their agreement based on the nature and duration of the activities required for access. To amend the requirements to mandate all agreements be in writing is likely to introduce an unnecessary regulatory burden for the parties.
		49	Land access – Criteria for deciding whether access is reasonable	The QLS suggests that the drafting of the provision does not achieve the intended policy objective. If the intent is that formed roads must be used first then this section does not achieve this.	This provision has been migrated across from the existing resources Acts and maintains the status quo. It is not intended to create an order of precedence that formed roads must be used before a new road is created, only that the reasonable possibility of using an existing formed road should be considered.
		52	Land access – Power of Land Court to decide access agreement	The QLS submits that: The words "if a dispute arises" in section 52(1) are unclear. For example: if there is a failure to agree, has a "dispute arisen"? If the owner or occupier claims that the matters in sections 49(2) and (3) have not been considered, does the Land Court have jurisdiction?	This provision has been migrated across from the existing resources Acts and maintains the status quo. The clause provides for either a resource authority holder or an owner/occupier to apply to the Land Court if a dispute has arisen between the parties about whether access is reasonable under clause 49(1). A 'dispute' arises when the owner/occupier disagree that the resource authority holder should access the land, disagree on the activities proposed to allow crossing of the land, or that the owner or occupier refuses to make an access agreement at all.
		55	Land access – Right of access for rehabilitation and environmental management	The QLS submits that this section does not deal with rehabilitation post expiry of the resource authority.	This provision has been migrated across from the existing resources Acts and maintains the status quo. It provides access to land under a resource authority for environmental management and rehabilitation. The point raised is acknowledged however any amendment of this provision should not be undertaken without a review of the broader tenure management and environmental licencing framework.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		57 and 58	Land access – Periodic entry notices for entry to public land	<p>The QLS states: In section 57(1), "periodic entry notice" is defined as "the first notice about an entry, or series of entries, to public land".</p> <p>Consequently, after the initial entry or series of entries it is not possible to give a further entry notice (as the "first" notice will have been given). Consequently none of the following sections in part 3, division 1 can apply, and in effect there is then no process for entry to public land.</p> <p>The Society recommends that section 57(1) be amended by changing "first" to "first and any subsequent".</p>	<p>The terminology used is a result of the drafting style adopted by the Bill in consolidating the land access provisions from across the resources Acts. The public land access framework has been migrated from the existing resources Acts, with some amendments to ensure consistency across authority types and to respond to matters raised during consultation with stakeholder's prior to and during the development of the Bill.</p> <p>The interpretation offered by QLS is narrow in that it implies there can only ever be one period in which an entry or series of entries can be made. It is the department's view that the clause provides that an entry notice is to be given for an entry or series of entries for a given period, as implied by its definition as a 'periodic entry notice'. This particular requirement was clarified by this Bill in providing a consistent framework that the entry notice is only to be given at the beginning of each period, not every time the public land is entered. Nothing in the clause suggests that the entry or series of entries is restricted to one period.</p>
		58(2)	Land access – Comply with section 58(1) despite being an applicant for the resource authority	<p>The QLS submits: The drafting is well intended but does not work. It is clear from section 58, and section 57 on which its operation relies that a notice can be given only in respect of a "resource authority" and by a "resource authority holder". The Society considers that section 58(2) does not adequately overcome the absence at the point at which the notice would be given of a resource authority, and therefore of a resource authority holder.</p>	<p>While the clause specifically mentions that the notice relates to a resource authority and authority holder, the policy intention is that an applicant may give the notice in anticipation that the resource authority will be granted. Under the intended framework, the amendments would remove or decrease the potential delays for a resource authority holder to commence operations after the grant of the resource authority.</p>
		61	Land access - Notifiable road use	<p>The QLS submits: This division should be stated not to apply to a declared project under the <i>State Development and Public Works Organisation Act</i> (see <i>Mineral Resources Act 1989</i> section 318EM).</p>	<p>The Bill at clause 65 provides for a regulation to prescribe a resource authority or project as being exempt from the notifiable road use requirements. The intention is for declared projects under the <i>State Development and Public Works Organisation Act</i>, to be prescribed as exempt projects.</p>
2	Queensland Law Society (QLS)	68	Restricted land – Point when it applies	<p>The QLS states: It is preferable that restricted land applies at the date the resource authority application is lodged, rather than when granted.</p>	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks. This policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity. There are advantages and disadvantages of when restricted land should apply.</p> <p>The current restricted land framework for the mineral and coal sector is inconsistent. For mineral development licences, mining claims and mining leases,</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>restricted land applies from the time the application is lodged. For mining claims and leases, restricted land is excluded from the grant if consent from the owner is not received before the last objection day.</p> <p>However, for exploration permits restricted land applies at any time. The same is true for the restricted land framework for geothermal tenures and the petroleum and gas sector with respect to the 600 metre rule.</p> <p>While it is possible that a building (other than a residence) may be constructed between the time an application is lodged and when it is granted, it still needs to satisfy the criteria for being restricted land (i.e. cannot co-exist and not be easily relocated). Any attempt to quickly construct a building to impede the applicant's proposal would need to meet these criteria.</p> <p>A landholder may have legitimate construction underway or planned when an application for a resource authority is lodged. As they have no ability to predict the lodgement of an application, in this case it would be reasonable for the landholder to have an opportunity to complete their intentions.</p> <p>For petroleum and gas operations, unlike a mineral or coal mine, the exact location of infrastructure is not as critical. This together with the likelihood of a landholder purposely going to the expense of creating restricted land successfully (to impede the applicant), the risk of this provision causing serious issues should be low.</p>
		69	Land access – Who is the relevant owner or occupier	The QLS submits that: The definition of occupier should be restricted to someone who has a 'registered lease to occupy a primary dwelling'.	<p>Occupiers have been included in the restricted land framework as it is not uncommon for houses located on large properties that are owned by another member of the family to be used as the primary residence without formal arrangements. Other occupiers would include tenants renting a house or a lessee of a business premises.</p> <p>A distance of 200 metres has been consulted on as a potential range for restricted land to apply. Any occupiers that have a right to occupy within such a relatively small distance should be readily identifiable in consultation with the owners.</p>
		78(3)	Land access – Resource authority holder to notify new owner or occupier	The QLS submits that: The Bill requires an authority holder to notify a new owner or occupier, within 15 days of becoming aware of the change, of any notice or waivers that are in place regarding the entry to the land. QLS suggest that the cost for authority holders to conduct regular searches to determine any changes in ownership or occupancy would be	<p>The clause maintains the status quo for this requirement that is currently within each of the resources Acts and therefore is not an increase in regulatory burden. Nothing in this clause obligates the holder of the authority to actively monitor changes in ownership or occupancy.</p> <p>The intent of the clause is that if the holder becomes aware, and this may occur if the new or previous owner of occupier chooses to notify the holder, then the holder</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				quite expensive. QLS recommends that the time period for the obligation to give notice should commence once the authority holder has been given written notice of a new owner or occupier.	has 15 business days (~3 weeks) to give a copy of the entry notice or waiver to the new owner or occupier. This allows the new owner or occupier to be aware of existing circumstances related to entry or waiver of entry if the previous owner has neglected to pass on these details.
		77	Land access – Agreements, notices and waivers not affected by dealing	The QLS states: it is unclear whether this provision also applies to conduct and compensation agreements, deferral agreements and opt-out agreements. This ambiguity has not yet been addressed. It is recommended that the section specify whether this is the case.	This provision does not apply to conduct and compensation agreements. Clause 93 binds successors and assigns to a CCA. The department is currently considering whether opt-out agreements should be binding upon successors and assigns. Deferral agreements are not binding upon successors and assigns and this is consistent with the existing framework.
		79	Land access – Access agreement binds successors and assigns	The QLS states: access agreements in clause 47 should be in writing only. Without these agreements being in writing the QLS suggests a likely conduciveness to dispute and uncertainty.	This provision has been migrated across from the existing resources Acts. The ability for the agreement to be made orally or in writing ensures that there is sufficient flexibility in the framework to accommodate different access scenarios. The framework allows the parties to decide how to record their agreement based on the nature and duration of the activities required for access. To amend the requirements to mandate all agreements be in writing is likely to introduce unnecessary regulatory burden for the parties.
		80	Land access – Compensation and negotiated access	The QLS states: The Society notes generally that "occupiers" should not be entitled to claim compensation in respect of the grant of mining leases, which should continue to be governed by the regime in chapter 6, <i>Mineral Resources Act 1989</i> as it stands.	Chapter 6 of the <i>Mineral Resources Act 1989</i> provides for the compensation requirements for a mining lease. It was not the policy intent for the general liability to compensate provisions in chapter 3 of the Bill to apply to mining leases, mining claims and prospecting permits. However, in consolidating the land access requirements from the resources Acts, these authority types have inadvertently been captured. The department will consider an amendment to rectify this error.
		82(1)	Land access – Notice of intent to negotiate	The QLS suggests that the drafting of the provision does not achieve the intended policy objective. The drafting is circular and requires an eligible claimant to suffer an impact prior to a notice for intention to negotiate being issued.	This provision has been migrated across from the existing resources Acts and maintains the status quo. The Bill, through clause 80, defines "eligible claimant" as "each owner and occupier of private land or public land that is in the authorised area of, or is access land for, the resource authority". This definition does not require the eligible claimant to suffer an impact. The notice of intention to negotiate is not dependent on an eligible claimant having

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					suffered from an impact before it can be issued.
2	Queensland Law Society (QLS)	83	Land access – Negotiations	The QLS recommends that a “without prejudice” provision be added to clause 83 for conduct and compensation agreement negotiations.	This provision has been migrated across from the existing resources Acts and maintains the status quo. Actions protected by ‘without prejudice’ cannot be tabled and scrutinised by the Courts. Therefore the Court’s jurisdiction would effectively be limited if the QLS suggestion were adopted. Further, the suggested amendment would also prevent the government from implementing the recommendations of the Land Access Implementation Committee.
		86(2)(b)	Land access – Parties may seek conference or ADR	The provision provides uncertainty, where one party does not “agree” to the ADR when called upon. The QLS suggest that a party to an unsuccessful negotiation be entitled to <u>specify</u> the proposed ADR.	Unresolved legal questions have arisen as a result of <i>Australia Pacific LNG Pty Ltd v Golden & Ors</i> [2013] QCA 366 regarding what occurs when a party does not agree to an ADR process as elected by the other party as per clause 86(2)(b) (which reflects the current Resource Acts). The department is currently investigating potential solutions.
		90	Land access – Particular agreements to be recorded on titles	QLS seek clarification why the requirement to note agreements upon title does not extend to access agreements and deferral agreements.	Deferral agreements are not included as agreements requiring notation on title as they are not binding upon successors and assigns under clause 93(1), which has been migrated from the resource Acts and maintains the status quo. Access agreements are binding upon successors and assigns (clause 79), but as the agreements detail the access of land for the purposes of reaching authorised areas, can involve extremely short periods of time, and do not involve the carrying out of resource activities, requiring notation on title is unnecessary. The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.
		90	Land access - Particular agreements to be recorded on titles	QLS seek clarity regarding how clause 90(3) will apply where the ending of an agreement is subject of a dispute.	Clause 90(3) requires a resource authority holder to give the titles registrar, within 28 days of the agreement ending, the necessary notice. All agreements will be required to stipulate within their conditions the period for which the agreement will have effect. If a dispute arises over the end date of the agreement, general avenues of contract dispute resolution such as mediation, arbitration and litigation will apply and resource authority holders, if required, will need to remove the particulars on the title within 28 days of resolution of the dispute.
		94	Land access – Land Court may decide if	The QLS states: In section 94(2)(c) the “eligible party” could be either the land holder or the resource authority holder	The department will take the recommendation under consideration.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			negotiation process is unsuccessful	<p>(see section 94(5)). Therefore the reference to "eligible party's land" makes no sense, unless "land" is intended to refer also to a resource authority. It would be more appropriate to refer to the "eligible claimant's" land.</p> <p>The Society understands that the addition of the new section 94(2)(c) is to clearly enable the Land Court to determine not only compensation but also conduct conditions. However, this is not what the section says – it goes much further by referring to "obligations or limitations". Consequently, it is open to the Land Court to in effect change conditions on which the resource authority was first granted.</p> <p>The Society suggests that rather than referring to "obligations and limitations", it would be clearer and more helpful to the parties if reference were made to the matters in section 81(1)(a) and (b), they being the proper subjects of conduct and compensation agreement on which the Land Court is effectively to rule.</p>	
		Schedule 2	Land access – Definition of occupier	<p>QLS is concerned that the definition of occupier is extremely broad and may cause difficulty for authority holders to identify.</p>	<p>The definition of occupier has been transferred unchanged from the existing resources Acts and was drafted to accommodate the broad range of occupation rights that may exist for land.</p> <p>At the public hearing before this Committee into the then Mining and Other Legislation Amendment Bill, QLS also suggested a two stage test in relation to the second part of that definition. The Minister undertook to further investigate that possibility.</p> <p>The department advises that rather than undertake further amendment of the definition, it is proposed that a practice manual be developed under the Common Resources Act that provide further clarification on what steps an applicant must take to identify occupiers of the land the subject of the tenement application.</p> <p>The department believes that this would address the QLS's concerns.</p>
		Chapter 4	Overlapping tenure – Limited time available for consultation	<p>The QLS states: The Society remains concerned that the timing allowed for consultation and implementation of the coal and coal seam gas overlapping tenure regime within the MERC Bill is insufficient to allow for the necessary</p>	<p>The department thanks Queensland Law Society for its submission and notes the views expressed relating to the short timeframes given for consultation on the Bill. The department will ensure that they continue to engage with key industry stakeholders on the development of any proposed amendments to the Bill and any</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				assessment of the framework and structure of the proposed legislation as a whole.	subsequent regulation development.
		Chapter 4	Overlapping tenure – Incomplete regime	<p>The QLS submits: The MERC Bill provisions do not reflect the entire proposed regime [White Paper]. The Society understands that the Government's intention is to resolve the gaps and outstanding structural matters that form part of the White Paper solution, including those relating to the Code of Practice and to health and safety requirements, but also some of the 'unresolved' White Paper issues concerning transitional arrangements in regulations and in future legislation and legislative amendments.</p> <p>While the Society encourages the process of clarifying uncertain provisions and ensuring that the legislation regime is complete, we are concerned that such significant matters are not settled and included in the MERC Bill. It is clearly undesirable for legislation to be introduced with flagged further structural provisions and amendments required to reflect a complete regime. While acknowledging the Government's stated intent that the new regime will not commence until the further provisions are in place and regulations settled, such a position creates uncertainty for those persons affected. The Committee expects that this outcome is the result of the short timeframes under which this legislation was developed.</p> <p>We submit that it will be vital that satisfactory consultation occurs on the introduction of the further legislative provisions and regulations.</p>	The department thanks the Queensland Law Society for its submission and notes the views expressed relating to the short timeframes given for consultation on the Bill. The department will ensure that they continue to engage with key industry stakeholders on the development of any proposed amendments to the Bill and any subsequent regulation development.
		150 and 151	Overlapping tenure – Ministerial powers	<p>The QLS notes that the Ministerial powers provisions contained in the MERC Bill no longer include the power to amend resource authorities. Further, these provisions now include a set of criteria which the Minister must consider prior to requiring a resource authority holder to amend an agreed joint development plan. The Committee welcomes this response from Government.</p> <p>While the changes made are encouraging, the provisions still</p>	The department notes Queensland Law Society's concerns regarding the Minister's powers under chapter 4. The clause is drafted consistent with the government's policy position. However, the department is investigating options to expand the matters the Minister must consider in deciding whether to require an amendment to an agreed joint development plan under clause 150(2). The department is also investigating further potential options for affected parties to appeal the Minister's decisions.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>raise concerns for the QLS and do not appropriately address all concerns raised by the QLS in its original submissions. The power of the Minister to require amendment of agreed joint development plans continues to remain a potentially significant issue of sovereign risk, and the criteria which were drafted with the intention of limiting that power provide little certainty regarding its exercise. This power has the potential to undermine and modify established and negotiated commercial arrangements and to do so with no compensation to the parties affected. Further, this power is still not time-bound in the sense that the Minister may exercise it at any time after rights have been granted and joint development plans settled, and parties have entered into commercial and operating arrangements in reliance on those rights and joint development plans.</p> <p>The QLS submits again that these powers should be more limited and made subject to time limitation for their exercise (e.g. within a certain period of a joint development plan being settled). Further, the legislation must provide some clear means for affected parties to appeal the Minister's decisions.</p>	
		Chapter 4 and Chapter 7, part 4	Overlapping tenure – Transitional provisions	<p>The QLS submits that the transitional provisions for overlapping tenure suffer from incompleteness and relegation to subsequent legislation. The QLS states: In their present state the transitional provisions create a number of serious inconsistencies between the positions of coal and coal seam gas resource authority holders. There is still no provision for overlapping concurrent production applications. Further, the provisions as drafted are insufficient to ensure that the existing rights and commercial arrangements of parties are not unreasonably interfered with. DNRM has indicated that it is investigating these concerns and will amend these provisions as required.</p> <p>We submit that the development of the transitional provisions of the MERCP Bill is vital to the successful and equitable operation of the overlapping provisions, and stress that the positions outlined in the White Paper were the result of significant time and expense by stakeholders to negotiate a</p>	<p>The department notes Queensland Law Society's concern regarding concurrent applications and transitional provisions. The department has been working closely with industry in developing a policy position for concurrent applications.</p> <p>It is not the department's intention to have the Bill impact on existing commercial arrangements of resource authority holders. The department has been working with industry to investigate options to resolve this matter.</p> <p>The new overlapping tenure framework will have no impact on existing statutory agreements (i.e. coordination arrangements) that have been approved by the Minister and are the relevant arrangement to overlapping production resource authorities under the existing framework. The existing framework provided in the <i>Mineral Resources Act 1989</i> and the <i>Petroleum and Gas (Production & Safety) Act 2004</i> will continue to apply to a coordination arrangement in this scenario.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				legislative scheme appropriate for Queensland's coal and coal seam gas industries.	
		Chapter 9	Notification and objections	The QLS submits that it supports the simplification of mining lease application, notification and objection processes.	The department thanks the QLS for its support.
3	Queensland Resources Council (QRC)	3	MQRA Program	Largely supportive of the legislative amendments in chapter 2 but their successful application is highly dependent on the regulations yet to be drafted.	The department thanks QRC for their support of the proposed amendments and notes their interest in the development of regulations.
		18	Dealings, caveats and associated agreements – Prohibited dealings	Seek clarification that prohibited dealings do not void or prohibit commercial arrangements. Concerns are exactly the same as those presented to the Committee in 2012 by QRC and Freehills.	<p>Submissions to the Committee's inquiry into the Mining Legislation (Streamlining) Amendment Bill 2012 also raised issues with the drafting in that Bill on this issue. In their submission to that inquiry, Freehills recommended that the prohibited dealings section (as drafted) be amended to exclude the words "has the effect of". This was because of concerns the draft provision prohibited a dealing that "has the effect of" transferring a divided part of a resource authority. It was feared that this would void any commercial agreements where a holder had provided a third party with access to undertake activities on a particular area of the authority (i.e. had the effect of transferring). In such a case, the registered holder for that area still retains legal responsibility under the resources Acts.</p> <p>This issue was reviewed and an amendment was made to the respective prohibited dealings provisions by the <i>Mining and Other Legislation Amendment Act 2013</i> to remove the words "has the effect of". As such, the transfer of legal ownership of a divided part of a resource authority area is currently prohibited under the dealings provisions in each of the resources Acts and this policy is proposed to continue under clause 18 of this Bill. However, as clarified in the Explanatory Notes, any commercial agreement or transaction that does not transfer legal ownership is not prohibited. To transfer legal ownership, the Minister would need to approve the transfer and the change in ownership recorded on the register. If the transaction or commercial agreement does not attempt to do this for the area, then it is not prohibited.</p> <p>The department agrees with the submitter on the policy intent; however there is some variance on the most appropriate way to draft the provision. Importantly, the drafting of clause 18 does not contain the words "has the effect of" that was central to the Freehills submission. Other than sentence structure, clause 18 uses the same language as the existing sections of the resources Acts.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
3	Queensland Resources Council (QRC)				For example, section 318AAQ of the <i>Mineral Resources Act 1989</i> reads: "A dealing with a mining tenement...that transfers a divided part of the area of a mining tenement is prohibited". In contrast, clause 18 reads: "The following dealings are prohibited—a dealing with a resource authority that transfers a divided part of the authorised area for the resource authority..."
		Chapter 3	Land access	Largely supportive of the legislative amendments in chapter 3.	The department thanks QRC for their support for the proposed amendments.
		Chapter 3	Land access - 600 metre rule	QRC understands that it was the Government's intention to remove the 600 metre rule and instead introduce related amendments for restricted land. The Bill does not appear to have removed the 600 metre rule. QRC requests clarification on this proposal.	Currently under the Land Access framework an authority holder must not carry out an advanced activity unless each owner or occupier has entered into a conduct and compensation agreement. The current definition of preliminary activity excludes activities within 600 metres of an occupied residence or school, which effectively makes these activities 'advanced'. Definitions of preliminary activities in each of the existing resources Acts are amended by the Bill to remove this exclusion from the definition of preliminary activity. However, an error in clause 355 has failed to remove this from the definition for the <i>Mineral Resources Act 1989</i> and should be amended. The department will consider recommending amendment of the Bill.
		93	Land access - Compensation not affected by change in administration or of resource authority holder	Questions the inconsistency between the provisions that bind successors to CCAs for private land and access agreements for off-tenure access which includes <i>successors in title</i> , and suggests an amendment to reconcile the two provisions.	The department thanks QRC for identifying this inconsistency that has resolved from migrating provisions across from the existing resource Acts under this Bill. The department will take this recommended change under consideration.
		93	Land access - Compensation not affected by change in administration or of resource authority holder	Suggests an amendment to clarify that opt-out agreements are binding upon successors and assigns.	The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.
93	Land access - Compensation not affected by change in	Suggests amendments to the Land Title Act to stipulate that CCAs and opt-out agreements are exceptions to	The legislative framework does not create an interest in the land, greater than the right to access the mineral or energy resource. The department considers that the Bill maintains the status quo in this respect and provides adequate direction that		

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			administration or of resource authority holder	indefeasibility.	CCAs are binding on successors and assigns. Therefore it is not considered amendments to the <i>Land Title Act 1994</i> are necessary.
		43	Land access – Land Court consideration	<p>The QRC submits: The wording in section 43(1)(d) introduces uncertainty as to the timing for access to private land for resource authority holders by proposing that access only be permitted once an application relating to the land under section 94 is "being considered" by the Land Court.</p> <p>QRC recommends more clarity in the drafting by replacing the words "being considered by" in section 43(1)(d) with the word "to".</p> <p>Additionally, the word "considering" also raises questions on timeframes in respect to sections 40(1)(c) and 43(1)(d) of the Bill. Does the word "considering" in section 40(1)(c) mean that the Land Court proceedings must have reached a certain stage before that subsection applies? QRC suggests some further clarification about the meaning of "the Land Court is considering" would be helpful.</p>	There is no intent to change the CCA exemption where a Land Court application has been lodged. The terminology used is a result of the drafting style adopted by the Bill in consolidating the land access provisions from across the resources Acts. While the clause specifically mentions that an application has been made, it is acknowledged that some may find the addition of the word 'considering' introduces some uncertainty. The department will take the recommendation under consideration.
		86	Land access – Alternative dispute resolution	<p>This provision enables one party to "call upon the other party to agree" to an ADR process. However there is no further clarification if the other person does <u>not</u> agree. The Bill only provides recourse if the other person fails to attend the ADR.</p> <p>QRC seeks clarification to prevent a unilateral declaration for ADR occurring given a recent decision by the Queensland Court of Appeal.</p>	Unresolved legal questions have arisen as a result of <i>Australia Pacific LNG Pty Ltd v Golden & Ors</i> [2013] QCA 366 regarding what occurs when a party does not agree to an ADR process as elected by the other party as per clause 86(2)(b) (which reflects the current resource Acts). The department is currently investigating potential solutions to provide clarification and if legislative amendment is required, will recommend amendments in a future Bill.
3	Queensland Resources Council (QRC)	100	Overlapping tenure – Bespoke arrangements	The QRC submits: The right to agree to alternative arrangements is recognised under section 100(2)(d) of the Bill as one of the mechanisms by which the purposes of Chapter 4 are to be achieved. However, there are no operative provisions (express or implied) within the remainder of Chapter 4 which grant tenure holders the ability to agree to bespoke alternatives to the default legislative regime.	<p>The department notes the view expressed by the QRC on this issue. As acknowledged by the QRC in its submission, the department is continuing to work with the QRC and industry in general to ensure that the new overlapping tenure framework provides some flexibility for the parties to, in certain circumstances, enter into alternative arrangements to that established in the framework.</p> <p>The department is working with industry to investigate options to make it clear that the parties may agree to alternative arrangements to those prescribed in new overlapping tenure framework, except to the extent of certain prescribed aspects</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>While section 100(2)(d) will aid in the interpretation of the remainder of Chapter 4 of the Bill, in the absence of further provisions giving effect to the intention so expressed in section 100(2)(d), the legislative framework will be unduly restrictive. It was never the intention of industry for the White Paper principles (which form the basis of the Bill) to apply in all circumstances.</p> <p>The QRC further submits: The failure to include express mechanisms allowing parties to agree to alternative arrangements is a fundamental flaw in the Bill and must be addressed. Similarly, the fact that such a mechanism has not been incorporated into the drafting of the Bill poses difficulties for the practical implementation of a number of other aspects of the Bill (including for example the finalisation of Joint Development Plans (see section 7 below), grandfathering of existing arrangements and mechanisms for offsetting compensation liabilities). DNRM has acknowledged that this remains an outstanding issue and continues to work with industry in this respect.</p> <p>While QRC members acknowledge that there may be some aspects of the Bill that parties will not be able to contract out of, Government should ensure that the greatest degree of freedom is afforded to parties to negotiate arrangements suitable to the particular overlap circumstances. A suitable mechanism may therefore take the form of a blanket acknowledgement that the legislative regime does not limit parties from agreeing alternative arrangements, except to the extent of certain prescribed aspects which are required for the State to discharge its custodian obligations. Alternatively, specific provisions of the regime could be made subject to that which is otherwise agreed between the parties in individual circumstances.</p>	<p>which are required for the State to discharge its custodian obligations.</p>
		Chapter 7	Overlapping tenure – Transitional arrangements	<p>The QRC submits: The time allowed for consideration of the Bill has not been sufficient for QRC and its members to fully consider, and reach a consensus view on, the full suite of transitional arrangements.</p>	<p>The department does not support the removal of the transitional provisions from the Bill, but remains committed to working with industry to ensure that these provisions correctly reflect the industry agreed policy position prior to the commencement of the new overlapping tenure framework.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>The QRC further submits: In light of the time constraints on industry's review of the Bill's transitional provisions, and this ongoing collaborative consultation process, QRC submits that the transitional provisions be removed from the Bill. This will allow further time for both all stakeholders to fully consider the transitional arrangements as proposed, and to provide considered feedback on these fundamentally important provisions.</p> <p>QRC proposes that these provisions be included in a later raft of amendments to the resources legislation (e.g. introducing expected health and safety reforms or at the time the draft regulations are prepared), prior to the commencement of the new legislative framework.</p>	<p>As the QRC would be aware, subsequent to the lodgement of its submission to AREC, the department is investigating options to resolve the matter, based on feedback received from industry via the QRC.</p>
		Chapter 4	Overlapping tenure – Grandfathering of existing arrangements	<p>QRC submits: The Bill does not include any express recognition of existing co-development or other commercial arrangements.</p> <p>DNRM have advised QRC that legislative provisions preserving existing co-development arrangements are unnecessary, as this is a commercial matter for the parties and not subject to statutory regulation. However, the QRC submits that this approach fails to acknowledge the advanced implementation of development and operational plans which have been agreed by many proponents.</p> <p>Significant investments have been made by industry on the basis of such co-development agreements which provide clarity and security with respect to the conduct of overlapping operations. As such, the QRC considers it imperative that there is an express preservation of these arrangements in the Bill.</p> <p>The preservation of existing arrangements is also not a simple matter of inserting provisions to give the parties the right to agree to bespoke alternatives. What is required is an acknowledgement of existing rights and obligations as determined between the parties and enshrined within the existing arrangement. It should also be noted that any preservation of existing arrangements will also require</p>	<p>The new overlapping tenure framework will have no impact on existing statutory agreements (i.e. coordination arrangements) that have been approved by the Minister and are the relevant arrangement to overlapping production resource authorities under the existing framework. The existing framework provided in the <i>Mineral Resources Act 1989</i> and the <i>Petroleum and Gas (Production & Safety) Act 2004</i> will continue to apply to a coordination arrangement in this scenario.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
3	Queensland Resources Council (QRC)			amendments to the joint development plan provisions in Chapter 4, Part 2, Divisions 3 and 5 of the Bill to give effect to those plans which form part of the existing arrangement.	
		231-233	Overlapping tenure – Surat Basin Transitional Area	<p>Under section 4.1 of the White Paper, it was acknowledged that industry were unable to reach a consensus position on the transitional treatment of existing production tenure applications.</p> <p>While the coal industry advocated that existing production tenure applications should be subject to the new legislative framework, the CSG industry proposed a mechanism which gave separate treatment to those applications within the Surat Basin. The CSG industry proposed that such applications, if granted within a 4 year transitional period, would be granted under the existing regime.</p> <p>The provisions currently found in sections 231-233 of the Bill represent DNRM's attempts at seeking a 'middle-ground' position.</p> <p>However, industry has not had sufficient time to fully consider the alternative as put forward by DNRM in the Bill and there are significant concerns the current drafting does not incorporate key elements of the broader White Paper framework (e.g. ability to agree to bespoke arrangements and preservation of existing arrangements) and that the provisions as drafted may work to the favour or detriment of individual companies.</p> <p>Given the significance of the issue to the development of coal and coal seam gas resources within the Surat Basin, DNRM has undertaken to further review and consider the transitional provisions in sections 231-233 of the Bill in conjunction with industry. The QRC endorses this approach and requests that Government allow sufficient time for these issues to be resolved.</p>	<p>The department appreciates that the matter of transitional arrangements for the Surat Basin geographical area is a contentious issue for the resource industry. This is evident in the fact that the parties failed to reach an agreed position on the matter in the White Paper and turned to government to resolve this matter. These particular transitional arrangements reflect the advice given to industry via correspondence dated 26 November 2013.</p> <p>The department agrees that the intent was that the parties can agree to a mining commencement date that is different to the statutory minimum. The department has commenced investigating options to clarify the application of the division and the ability of parties to come to an agreed mining commencement date different to that provided in section 232.</p> <p>It is the intent of clause 114(2) of the Bill to provide some flexibility for the parties to agree to a mining commencement date that is earlier than one that is provided in the transitional provisions (as well as in chapter 4). However, there seems to be issues of clarity and interpretation with this clause. Therefore the department is investigating options to clarify that the parties may agree to a mining commencement date different to that established in clause 232, therefore making clear the opportunity for the parties to negotiate a truncated notification period.</p> <p>The department understands that QRC and APPEA are in the process of leading further discussions with industry on this particular matter and will be providing additional advice regarding possible amendments to this division of the Bill in the near future.</p>
		Chapter 7	Overlapping tenure – Concurrent production	QRC submits: Industry and DNRM are currently engaged in discussions with respect to finalising a position in relation to	The department agrees with the QRC that amendments are required to insert specific provisions regarding the transition of concurrent production resource

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			applications	concurrent production applications and have made considerable progress to date. It is understood that amendments with respect to concurrent production applications will be introduced in a subsequent legislative vehicle.	authority applications under the new overlapping tenure framework. The department notes that the QRC is leading discussions with industry to develop an agreed position on this matter and it is understood that the QRC is close to providing industry's position to the department.
		Chapter 4, part 4, division 3	Overlapping tenure – Compensation	<p>QRC submits: Industry understands that Government's intention is to enshrine the compensation principles described in the White Paper in the regulations.</p> <p>QRC further submits: the following principles should nevertheless be clearly reflected in the legislation:</p> <ul style="list-style-type: none"> the CSG tenure holder has the burden of proof to substantiate any claim for compensation; any compensation sought must not otherwise have been compensated (i.e. principle of no double-dip); financial compensation is to be paid at the time the lost production would have otherwise occurred; and <p>if mine development is delayed beyond the date set out in an acceleration/confirmation notice (other than for circumstances beyond the control of the ML holder), any additional costs incurred by the CSG tenure holder in response to the acceleration/confirmation notice (e.g. accelerated production) will be paid by the ML holder.</p>	<p>The department notes the QRC's comments regarding the development of the draft regulation and would like to assure the QRC that the department will continue to work in partnership with the QRC and with industry stakeholders in general, to ensure that the regulation correctly reflects the policy intent of the White Paper.</p> <p>The department is investigating options to provide a head of power in the Bill for the principles regarding compensation as raised by the QRC. The detail of these principles will be provided for in the regulation, which is consistent with similar clauses contained in the Bill.</p>
		Chapter 4, part 4, division 3	Overlapping tenure – Compensation, hierarchy of preferences	<p>QRC submits: While QRC acknowledges the preference of DNRM to provide a head of power in the Common Provisions Bill which will allow the compensation provisions to be outlined in further detail in the regulation, it is submitted that the concept of "hierarchy of preferences" for compensation in relation to lost CSG production be expressly reflected in the legislation itself, rather be than prescribed by regulation.</p> <p>QRC further submits: While QRC acknowledges that Division</p>	The department notes QRC's concern regarding the hierarchy of compensation methods. It was the department's intention that the hierarchy of compensation methods be included in the regulation. In response to industry's concerns, the department is investigating options to clearly show the hierarchy of preferences (i.e. mitigation of loss, replacement gas and financial compensation).

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				3, Part 4, Chapter 4 of the Common Provisions Bill includes principles to be prescribed by regulation in relation to the mitigation of compensation liability and the calculation of compensation for lost production and replacement of infrastructure, this does not reflect the full scope of the White Paper hierarchy.	
		Chapter 4	Overlapping tenure – First right of refusal	<p>QRC submits: The White Paper (section 3.11.1) establishes an obligation on the coal party to use reasonable endeavours to:</p> <ul style="list-style-type: none"> • minimise any unnecessary contamination or dilution of ICSG; • where practicable, maximise the recovery of Undiluted ICSG; and • maximise the value of Undiluted ICSG by aligning production volumes as closely as possible to the capacity of gas distribution infrastructure serving the mine. <p>While it is acknowledged that the offer of supply of ICSG under the first right of refusal mechanism would be subject to the resource optimisation requirements in s. 134 of the Bill, as drafted the legislation omits the obligation on the coal party to maximise the value of the Undiluted ICSG as set out above.</p> <p>To account for operational realities and the differing qualities of gas which may be extracted in conjunction with coal mining activities, it is expected that this obligation be contemplated in the drafting.</p>	The department notes QRC's concerns and will work with industry to investigate options to resolve the matter.
3	Queensland Resources Council (QRC)	135	Overlapping tenure – First right of refusal	<p>QRC submits: Further consideration also needs to be given to the triggers for the making of an offer and the various time periods that then apply in this process. The obligation in section 135(2)(a) of the Bill on the coal party to make an offer for Undiluted ICSG immediately after it becomes 'aware' of the gas is vague and may be subject to various</p>	The department notes QRC's concerns regarding first right of refusal for incidental coal seam gas and is investigating options to resolve the issue based on the matters raised by the QRC in its submission to better reflect the intent of the White Paper. The department will ensure that it continues to engage with the QRC and other industry stakeholders on the development of these operationally complex

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>interpretations. Greater definition needs to be applied to the concept of awareness, in a manner that correlates with the requisite information to be provided in the notice of offer.</p> <p>The timeframes applicable to this process require further consideration, in that:</p> <ul style="list-style-type: none"> the 12 month period for the gas party to accept the offer in accordance with section 135(3)(a) may pose various difficulties for the coal party, depending on the actual circumstances of it becoming 'aware' of the gas (during which time the operations of the coal party may be curtailed pending a decision to accept and action to take by the gas party); the two years to take supply under section 135(4)(b) may pose similar operational difficulties for the coal party, given the end date of the aggregate of the maximum periods to accept and to take may fall well beyond the date that the coal party assumes its rights to conduct operations in the Initial Mining Area ('IMA') or Rolling Mining Area ('RMA') (which may therefore be curtailed by an inability to deal with the gas); the concept of 'use' of the gas in section 135(7) is not clear and creates potential difficulties for the coal party, in that if use means the application of the gas in a particular process, 12 months to use the gas may be insufficient lead time in circumstances where significant capital expenditure and development is required (e.g. to construct and commission a generation plant). QRC submits that this provision should be amended, to either clarify the concept of 'use' as extending to commercial allocation of gas to a particular purpose (rather than a more narrow concept of use), or a longer period be ascribed to the timeframe for use). 	<p>provisions of the Bill and any subsequent regulation development.</p> <p>The department agrees with the QRC's comment on the error in the drafting of clause 135(7) and is working to resolve the matter.</p> <p>The department would like to draw the QRC's attention to the following:</p> <ul style="list-style-type: none"> clause 134 of the Bill currently establishes the requirement for the holder of an ML (coal) to maximise resource optimisation; and the timeframes provided in clause 135(3)(a) and clause 134(4)(b) are consistent with section 3.11.2 of the White Paper i.e. within 12 months and within two years. In addition, these provisions provide some flexibility for the parties to agree to timeframes outside the 12 months and two years established by these sections.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
3	Queensland Resources Council (QRC)			Section 135(7) of the Bill also appears to be drafted in error, in that the timeframe for use of the gas by the coal party should run from the date the offer is rejected or deemed not accepted, rather than the date of the offer. Otherwise, this section is not workable.	
		135	Overlapping tenure – Cost contributions	QRC submits: The drafting under s. 135 for an offer by the coal party to supply ICSG should recognise the coal party's entitlement for a reasonable contribution towards the cost of ICSG production which takes into account the costs and benefits that the overlapping tenement holders would otherwise incur in the absence of the ICSG off-take.	The department notes the QRC's concerns with the cost contributions of incidental coal seam gas not being expressly provided for in the legislation and will investigate options to resolve the matter.
		135	Overlapping tenure – Notice of officer and contract for delivery of ICSG	QRC submits: While s.135(4) of the Bill requires the parties to enter into an ICSG delivery contract on acceptance of the offer by the petroleum resource authority holder, none of the proposed statutory criteria for the contents of an offer or re-offer or the creation of such contracts are included in the Bill. Rather, pursuant to s.135(5) and s.135(8), these are matters that are to be prescribed by regulation. QRC strongly recommends that Government confirm as soon as possible the intended scope and application of these regulations and that industry be extensively consulted throughout the development of these regulations. QRC understands that the Government is considering building in flexibility to agree to an offer format or delivery contract that is different to that prescribed in regulation.	The department will continue to work closely with the QRC and other key external stakeholders during the development of the regulation to ensure it reflects the intent of the White Paper and remains relevant.
		161	Overlapping tenure – Compensation offset with respect to ICSG	QRC submits: Section 161(1)(b) of the Bill provides that an ML holder's compensation liability will be offset by an Undiluted ICSG offered but not accepted by a PL holder. However the drafting fails to acknowledge that, under the White Paper, such an offset would not apply to the extent that it is not practicable for the gas party (acting reasonably) to provide ICSG off-take infrastructure capacity aligned with the offered supply. QRC submits that this drafting oversight	The department agrees with the QRC's comments and is investigating options to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				should be corrected along with the matters outlined above.	
		167	Overlapping tenure – Dispute resolution, arbitration	<p>QRC has questioned whether the following principles would be sufficient to allow an arbitrator to appropriately determine disputes on the referable matters. When resolving disputes, the Bill merely requires an arbitrator to:</p> <p>Optimise the development and use of the State's coal and petroleum resources to maximise the benefit for all Queenslanders; and</p> <p>Be consistent with safety and health requirements under mining safety legislation.</p> <p>In the absence of further guidelines and procedures for the conduct of arbitration there is a risk that an arbitrator will have insufficient guidance to deliver outcomes consistent with the principles of the White Paper.</p>	<p>The department notes QRC's concern regarding the sufficient level of detail the arbitrator has available to make a decision regarding a dispute. The department is investigating options to establish a regulation making power in clause 167 which will provide further information in the regulation. The department will continue to work closely with the QRC and other key external stakeholders to ensure the principles reflect the intent of the White Paper and remain relevant.</p>
		144 and 145	Overlapping tenure – Adverse effects test	<p>QRC submits: The current drafting of sections 144 and 145 of the Bill ('Adverse Effects Test') prevents the holder of a PL from carrying out authorised activities within the overlap of an Exploration permit for Coal/Mineral Development Licence if the PL activities would adversely affect coal exploration activity. Not only is this inconsistent with the White Paper principle that the gas party is free to explore and produce outside the area of sole occupancy, it also has the effect of allowing the conduct of coal exploration activities to frustrate safe and efficient CSG production.</p> <p>Similarly, the Adverse Effects Test fails to acknowledge the principle in section 3.3.5 of the White Paper that the conduct of exploration activities on production tenure will be subject to directions of the safety officer for the production tenure. QRC in conjunction with industry are currently making separate submissions to DNRM in relation to draft legislative amendments to the safety and health provisions for the overlapping tenure regime and this issue is among those to be discussed further.</p>	<p>The department agrees with the QRC's comment that the Adverse Effects Test approach in clause 145, so far as it applies to a PL, is inconsistent with the White Paper. The department is investigating options to resolve the matter.</p> <p>The department also notes the QRC's comments regarding the safety and health provisions relating to the overlapping tenure framework.</p> <p>The QRC's interpretation of clause 145(b) is correct. This is consistent with the current requirements for overlapping exploration tenures under the <i>Mineral Resources Act 1989</i> (i.e. section 318CH) and the <i>Petroleum and Gas (Production and Safety) Act 2004</i> (i.e. section 358).</p> <p>In response to the QRC's suggestion regarding alignment of section 145(b) of the Bill with section 318CI of the <i>Petroleum and Gas (Production and Safety) Act 2004</i>, this section applies where an EPC is granted over a PL. The section of the Bill in question is the reverse scenario. The department does not consider that the section/s suggested by the QRC would apply in the scenario in question.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				It should also be noted that the current drafting of section 145(b) of the Bill appears to suggest that the activities of the column 1 tenure are contingent on the activities of the column 2 tenure having commenced. It is submitted that the drafting of the provision be revisited to align with the wording in the existing provisions in the <i>Mineral Resources Act 1989</i> and <i>Petroleum and Gas (Production and Safety) Act 2004</i> (e.g. section 318C1(2)).	
		127 and 138	Overlapping tenure – Joint development plans and bespoke arrangements	<p>QRC submits: The current drafting of sections 127 and 138 of the Bill create practical difficulties in the context of recognising bespoke arrangements and grandfathered arrangements. This is because the mandatory content requirements are predicated on the 'Rolling Abandonment Model' (i.e. the model utilising IMAs and RMAs) applying in all circumstances. This is inconsistent with the overarching White Paper principle that the legislative regime is the default regime only and that the parties are free to negotiate alternative bespoke arrangements.</p> <p>For example, at its extreme, there may be circumstances in which the parties agree a bespoke arrangement which does not involve the 'Rolling Abandonment' principle. In those circumstances, IMAs/RMAs may not be relevant. However, it is likely that there would still be identified areas of 'sole occupancy'.</p> <p>It is submitted that the content requirements should not be as prescriptive as currently drafted and should instead reflect the basic information which is required by DNRM to discharge its custodian obligations. Such requirements may include: identification of areas of sole occupancy (without mandating the identification of IMAs/RMAs), proposed timing of activities and the location of relevant infrastructure.</p> <p>QRC requests further consultation with DNRM once the requirements with respect to health and safety obligations and planning have been finalised.</p>	The concepts of IMA and RMA and their identification are central to the framework contained in the Bill, and links to the ability of the parties' rights to compensation and alternative dispute resolution under the legislation. The department notes the QRC's comments regarding the need for flexibility and will work with industry to investigate options to resolve the matter.
		Clause 130	Overlapping tenure -	In an initial submission to DNRM on the draft legislation	The department thanks QRC for its submission and notes the views expressed.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		and 141	Amendment of agreed joint development plan	<p>amendments to implement this overlapping tenure framework it was highlighted that the requirement for amendments to JDPs to be effective upon registration creates an onerous burden on parties in the context of minor changes to an agreed JDP (often made on an informal basis at the ground level between site personnel).</p> <p>Industry had proposed some form of materiality threshold be included in the provisions which are now reflected in section 130 and 141 of the Bill.</p>	The department is investigating options to clarify that an agreed joint development plan is only required if a significant change has occurred in the areas outlined in section 130(4).
		124	Overlapping tenure – Exceptional circumstances notice	<p>In relation to the reopening of exceptional circumstances, DNRM has stated that the reopening of exceptional circumstances is available through the mechanisms for amending a joint development plan. On a strict interpretation of section 130(6) and section 139(2) of the Bill, it is difficult to see how an amendment of a joint development plan may act as a surrogate mechanism for reopening exceptional circumstances. This is largely due to the fact that the exceptional circumstance mechanism itself under section 124 is not considered a ‘relevant matter’ (even though the outcome of modifying the mining commencement date may be).</p> <p>Furthermore, the operation of section 124 is dependent upon the CSG tenure holder providing notice within three months of receiving an advance notice, which would not cover any future acceleration or amendment of the joint development plan.</p> <p>It is suggested that an express mechanism for reopening exceptional circumstances be included in respect of the issuing of any acceleration notice under section 125 of the Bill to align with the principles set out in the Technical Working Group papers.</p>	<p>The department agrees with QRC’s comments on this matter and is investigating options to address QRC’s concerns, namely to:</p> <ul style="list-style-type: none"> • amend s124 to apply the section to the holder of an ATP as well as the holder of a PL; • amend s124 to allow the holder of a petroleum resource authority to reopen a claim for exceptional circumstances when the ML holder issues an acceleration notice for an IMA or RMA under section 125 (note this would in practice only apply to the holder of a PL as there is no right for an ML holder to accelerate production over an ATP); and • insert a new section that will apply the extended mining commencement date where an ATP holder has proved exceptional circumstances exist and the ATP is converted to a PL.
		355	Restricted land – 600 metre rule	Seeks clarification that the 600m rule will no longer apply after the commencement of the Act.	Currently under the Land Access framework an authority holder must not carry out an advanced activity unless each owner or occupier has entered into a conduct and compensation agreement. The current definition of preliminary activity excludes activities within 600 metres of an occupied residence or school, which effectively

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>makes these activities 'advanced'.</p> <p>Definitions of preliminary activities in each of the existing resources Acts are amended by the Bill to remove this exclusion from the definition of preliminary activity. However, an error in clause 355 has failed to remove this from the definition for the <i>Mineral Resources Act 1989</i> and should be amended. The department will recommend amending the Bill.</p>
		N/A	Notification and objections	QRC questions the 20 business day timeframe for the administering authority to make a decision on the environmental authority.	This timeframe is not changed by this Bill and is the same for all types of environmental authority. Consequently, this comment is out-of-scope for this Bill.
		386-390	Incidental coal seam gas	Highly supportive as ICSG should be put to beneficial use and is a more effective use of the resource and avoids wasteful venting of methane.	The department thanks QRC for their support for the proposed amendments.
4	Confidential				
5	EDO Qld	N/A	Notification and objections – Discussion Paper	<p>The EDO submits: EDO Qld is aware that 176 submissions were sent to DNRM in response to the public notification of the discussion paper (Mining lease notification and objection initiative discussion paper, February 2014). We received copies of over 100 of those submissions and observed that they opposed the proposed reduction in community rights. To the best of our knowledge, no summary of public submissions was ever released.</p>	<p>The department thanks EDO for their submission and can advise that there were 176 submitters to the discussion paper titled 'Mining lease notification and objection initiative' were received from individuals (98), community groups (13), landholders or landholder representatives (20), environmental groups (26), miners (6), peak industry bodies (2), LGAQ, Indigenous representative bodies (2), law firms (2), QLS, infrastructure providers (2), the Construction, Forestry, Mining and Energy Union (CFMEU) and the Queensland Tourism Industry Council (QTIC). One submission was signed by forty four individuals.</p> <p>The department has recently published the Decision Regulatory Impact Statement (RIS) for Notification and Objections on the Department's website. It will also be posted on the Department of Environment and Heritage Protection's website as well as the Office of Best Practice Regulation's website. The department will also be taking steps to advise each submitter of its release.</p> <p>A broad summary of submissions is provided within Section 7 of the Decision RIS dealing with the results of consultation and a more detailed summary of individual submissions is included within Appendix 4 Table 1 of that document.</p>
		N/A	Notification and	The community consultation process for notification and	The notification and objection initiatives were originally canvassed in a discussion

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			objections – Community consultation	objections was inadequate.	<p>paper released by the Minister for Natural Resources and Mines on 5 July 2013. The discussion paper was advertised on the departmental and Get Involved web sites until 26 July 2013 and both sites also noted that the discussion paper applied more widely than small scale alluvial mining. While submissions on the discussion paper were sought by 26 July 2013 submissions were received and accepted as late as 8 August 2013.</p> <p>Consultation was not targeted at industry generally or at the alluvial mining sector alone, rather the discussion paper was released for broad public comment and the request for feedback was not limited to industry or any particular industry sector. Additional meetings were held on the discussion paper with industry, rural and local government peak bodies and key state agencies at their request. Fifteen submissions were received from miners, resource companies, peak bodies and associations representing miners, landholders, local government and the community as well as the EDO.</p> <p>In response, the Minister for Natural Resources and Mines released a further discussion paper including a detailed regulatory assessment dealing specifically with notification and objections for public consultation on 28 February 2014, announcing its release in Parliament on 4 March 2014. That discussion paper detailed options and recommendations for a notification and objection regime that is considered to be more commensurate with the range of risks and impacts of mining projects than the existing highly prescriptive legislative requirements.</p> <p>The discussion paper was advertised on the Get Involved, EHP and DNRM web sites and consultation was open for 28 days. 176 submissions on the discussion paper were accepted and considered up to and including the 8 April 2014 (38 days from the discussion papers release – almost double the recommended time frame for consultation under the Regulatory Impact Statement guidelines).</p> <p>Additional direct consultation was undertaken with key stakeholders, particularly peak industry bodies including with AgForce, QFF, QRC, AMEC and APPEA again at their specific request.</p> <p>A Decision Regulatory Impact Statement has now been released, and is published on the department's website, summarising submissions received and the government's response to the issues raised and additional suggestions made by all stakeholders. The Decision RIS has been approved for release by the Office of Best Practice Regulation (OBPR) and will shortly be available on the OBPR, and EHP websites.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
5	EDO Qld	N/A	Notification and objections – Vexatious objectors	The EDO submits that there is no evidence of vexatious objectors in Queensland.	The amendments proposed by the Bill seek to provide for a notification and objection process that reflects the level of risk and scale of operations, and remove duplication between the <i>Mineral Resources Act 1989</i> and the <i>Environmental Protection Act 1994</i> . Complexity and duplication between this legislation can itself result in delays and uncertainty. By clearly defining who can object, under what grounds and that relevant matters are addressed under the appropriate Act will simplify the legislative process and reduce opportunities for delay.
		420	Notification and objections – Objection rights	<p>The EDO submits: Clause 420 of the Bill amends the <i>Mineral Resources Act 1989</i> (Qld) (MRA) to remove third party objection rights to the lease application process. It is proposed that the only persons who can object to a mining lease application be:</p> <ul style="list-style-type: none"> • An owner of land; • An owner of access land; and • A Local Government. <p>Such a change will ensure all of the following matters (which concern the lease application) will be discussed behind closed doors:</p> <ul style="list-style-type: none"> • The corporate identity of the miner, including their past performance and any parent company/subsidiary including overseas investors; • The type of mineral being mined; • The size of the mining lease area; • The past performance of the mining company; • The financial and technical resources of the miner; • How long the lease is proposed for; • Whether the land is mineralised, and if so, to what 	<p>The amendments provide for a notification and objection process that reflects the level of risk and scale of operations, and that removes duplication, reduces project delays and lowers costs for the industry in general, and low risk operations especially.</p> <p>They do this by looking at the notification and objection rights afforded under both the <i>Mineral Resources Act 1989</i> and the <i>Environmental Protection Act 1994</i> as a package that inextricably linked rather than two separate and disparate approvals and approval processes.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object on many mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an <i>Environmental Impact Statement</i>.</p> <p>The type of mine that requires a site specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>Numerically, the majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
5	EDO Qld			<p>extent;</p> <ul style="list-style-type: none"> Other issues relating to the public interest. <p>There should be open standing for the public to comment on all mining lease applications. Communities, particularly those in the region the mine is proposed, should be entitled to raise issues with whether mining is an appropriate land use for the area or in the public interest. Ultimately, this could lead to the absurd situation where up to 90% of mines can go ahead without any transparency or accountability whatsoever.</p>	<p>objection to the Land Court on matters that relate to the mining lease application.</p> <p>This provides a risk based approach to notification and objection on the matters relevant to the mining lease application, by allowing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests. The 90% of applications adjoining landholders and the community will no longer have a right to object to is the 90% of applications that they currently do not object to under either the <i>Mineral Resources Act 1989</i> or <i>Environmental Protection Act 1994</i>.</p>
		420 and 423	Notification and objections – Issues that can be objected to	<p>The EDO submits: The Bill ensures that those persons (above) are severely restricted in the types of objections they can raise. Currently anyone has a right to raise any issue whatsoever with respect to the proposed lease, including whether it is in the public interest or whether mining is an appropriate land use. Those rights will be severely restricted to narrow issues depending on what class of 'affected person' you are.</p> <p>The EDO further submits: It must also be remembered that minerals are public resources held for the common good. The allocation process necessarily requires public disclosure, transparency and debate. Where is the government's justification for removing these long held rights to debate the allocation of valuable public resources?</p> <p>This is a clear breach of section 4(3) <i>Legislative Standards Act 1992</i> (Qld) (LSA)- the Committee must consider that there is a balance within legislation" ...between individual and community interests." There is no balance here as community rights are being totally removed altogether.</p>	<p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests and hence to comply with the <i>Legislative Standards Act 1992</i>.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		245	Notification and objections – Environmental authorities	<p>Limiting public notification to site-specific applications is a severe reduction in community rights to object to mining projects which might affect their land or the environment. Minerals are a public resource which are owned by all of us. The “high-low” risk approach does not take into account cumulative impacts of many “low-medium risk” mines. While the high-risk approach is used under the CSG framework, that position is inherently flawed. “Equity” for a mining company is not comparable to “equity” for a developer as it doesn’t take into account “equity” for landholders, community and the environment.</p> <p>The EDO submits: For all EA applications, the government could consider narrowing objectors to groups and individuals who live and reside in Queensland and can raise legitimate environmental and social issues with the proposed mine. Secondly, narrow the scope of those who can object to the mining lease application. Suggested wording could be:</p> <p><i>"any person or group who is a resident of, or conducts relevant activities from, within the boundaries of the region where the mining lease is proposed."</i> or;</p> <p><i>"any person or group who can demonstrate a particular interest in, expertise or commitment to land use activities in the region ..."</i></p>	<p>The change to the <i>Environmental Protection Act 1994</i> to remove public notification requirements for ‘low risk’ mines (i.e. those that comply with the eligibility criteria) reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Narrowing the range of objectors would not prevent the time delays and costs associated with requiring public notification for small, low-risk projects, nor would it meet the proportionate assessment aim of these amendments.</p>
		245	Notification and objections – Eligibility criteria	<p>The EDO submits: Proper debate on this Bill is impossible without seeing the “eligibility criteria”. No information has been released during public consultation on exactly what site-specific applications would involve. EDO urges the Committee to delay debate of this aspect of the Bill until the proposed eligibility criteria have been released and subject to proper consultation.</p>	<p>The transitional eligibility criteria are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria have not changed in substance since the transition from calling low-risk mines “level 2” mines to referring to “standard applications” and “variation applications”. This change in terminology was effected as part of the <i>Environmental Protection (Greentape Reduction) and Other Legislation Amendment Act 2012</i> which commenced in March 2013.</p> <p>Therefore, it is not correct to say that the government has no clear idea of what mines will be publically notified. The existing eligibility criteria make this distinction clear, including that coal mines cannot meet the eligibility criteria and therefore must always be publically notified.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
5	EDO Qld				<p>The existing eligibility criteria will continue to operate in force until they are reviewed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process requires public consultation of the draft criteria and standard conditions, and consideration of any submissions prior to the final eligibility criteria and standard conditions being made.</p> <p>The transitional eligibility criteria and the standard conditions for mining activities must be reviewed by March 2016 due to sunset provisions in the transitional arrangements for the legislation which commenced in March 2013. Therefore, the eligibility criteria and standard conditions will be developed through a public consultation process and individuals and members of the community will have a right to have a say about the conditions that govern these small, low risk mines during that process. The eligibility criteria and standard conditions can also minimise any cumulative impacts – for example, the existing standard conditions for mining leases prevent the holder from carrying out certain activities, such as large volumes of chemical storage, or directly or indirectly releasing waste from the project area to any watercourse, waterway, groundwater, wetland or lake.</p>
		71 and 413	Restricted land	The EDO submits: Restricted land rights should remain even where open cut-mining is proposed. These are people's livelihoods we are talking about, it should not simply be a matter of whether resources will be 'sterilised' or not.	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		246	Notification and objections –	The EDO submits: The Bill should not remove the requirement to re-notify an EA application when an EIS is undertaken under the SDPWO Act. There are very significant	An EIS for a coordinated project under the <i>State Development and Public Works Organisation Act 1971</i> (SDPWO Act) includes assessment of significant environmental effects. Last year, the Coordinator General published a generic

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			Coordinated Projects	differences between the EP Act and the SDPWO Act process which disadvantage landholders and communities trying to come to terms with complex information.	<p>Preparing an environmental impact statement Guideline for proponents which states that:</p> <p>“The objective of the EIS is to ensure that all potential environmental, social and economic impacts of the project are identified and assessed; and that adverse impacts are avoided, minimised or sufficiently mitigated. Direct, indirect and cumulative impacts must be fully examined and addressed. The project should be based on sound environmental protection and management criteria.”</p> <p>Consequently, it is the Queensland Government’s view that requiring additional notification of the environmental authority application is unnecessary duplication of process.</p> <p>An analysis of the draft EIS public consultation period for EISs under the SDPWO Act in the last two years shows that the public consultation period has always exceeded the statutory consultation period under the <i>Environmental Protection Act 1994</i> (i.e. over 30 business days).</p> <p>Note that under the proposed amendments, the finalisation of an EIS is not the only criteria. In addition, the environmental risks of the activity must not have changed and the administering authority must be satisfied that any change would not be likely to attract a submission objecting to the thing the subject of the change. In those circumstances, any submitters to the SDPWO Act EIS will receive a copy of the draft environmental authority (if approved) and will have the right to appeal the environmental authority to the Land Court.</p>
6	Cotton Australia	3	MQRA Program	The Bill’s aim to consolidate common provisions across the resources Acts is supported; however this should not come at the expense of landholder rights by adopting the lowest standard from one of the Acts.	The department thanks Cotton Australia for their conditional support of the proposed amendments. The department agrees that the lowest regulatory approach should not be adopted in every case and this has not been the objective of the MQRA Program. An example of this is the adoption of the restricted land framework across all resource authorities. For the first time, landholders affected by future applications by the petroleum and gas sector will have a right to say no to most resource activities within close proximity to their homes.
		40(3)	Land access - Exemptions from obligations to notify	Concerned the broad definition of “independent legal right” has the potential for abuse.	The drafting of the provision has been modernised from the existing resources Acts which only refers to a “right”. This “right” is further clarified by the Bill under clause 40(3) as an “independent legal right” which is a right to enter land that is enforceable under any law, including common law right, but does not include a right to enter the land under this Act or a resource Act. A contractual arrangement is

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					provided as an example.
		40(1)(c)	Land access – Notice of entry	Cotton Australia submits: The exemption under 40(1)(c) is inappropriate as a landholder or occupier may still need to know when entry is planned (when Land Court is considering an application).	<p>It was not the policy intent for an application to the Land Court under the relevant section to exempt a resource authority holder from providing an entry notice to an owner or occupier. In ensuring consistent terminology has been used when consolidating the land access requirements from the resources Acts, this provision has inadvertently been added.</p> <p>The department will seek to rectify this drafting error.</p>
		45	Land access – Opt-out agreements	<p>Questions having no limitations on the circumstances in which an opt-out agreement can be made.</p> <p>Suggest amendments to enable prospective purchasers to request a CCA when an opt-out agreement is in place; and that independent legal advice is provided to the landholder.</p>	<p>The department notes Cotton Australia's concerns regarding no limitations being provided for the situations where an opt-out agreement can be used. However, the LAIC Report identified potential motivations for landholders wanting to opt-out of having a formal CCA, but did not recommend that legislative limitations should be imposed on the circumstances an opt-out could be exercised. The department is committed to implementing the LAIC report and believes landholders and resource authority holders will be able to determine the circumstances that an opt-out agreement will be suitable.</p> <p>Landholders will be encouraged to seek legal advice as to the suitability of an opt-out agreement in their circumstances, but this will not be a compensatable effect under clause 80 to avoid unnecessary delays and complexity to an agreement that is designed for straightforward situations. A landholder that wishes to recover legal costs should request the negotiation of a CCA.</p> <p>The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.</p>
		67	Restricted land	Cotton Australia states: The changes to the 600 metre rule now require consent within 200 metres of homes for exploration and production authorities, while the distance is only 50 metres for other resource authority types. It is unclear exactly what resource activities fall under the consent requirements for each distance. We understand that the specific resource authority types will be outlined in the Regulations. As it currently stands, this does not adequately protect landholder homes and key infrastructure.	<p>All resource activities that are carried out on the surface of land or below the surface of land that are likely to have a surface impact (other than exemptions provided) will require consent for the owner or occupier of restricted land.</p> <p>While the distances for restricted land are proposed to be prescribed by regulation under clause 67, a distance of 200 metres has been consulted on in a Regulatory Impact Statement to apply for any exploration and production authorities (e.g. exploration permits, authorities to prospect, mining leases, petroleum leases etc.) and petroleum facility licences, and 50 metres for all other resource authorities including data acquisition authorities, water monitoring authorities and survey licences.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		67	Restricted land – Drafting approach	Bill should contain key principles of the consent requirements with flexibility added in the regulation to allow for practices and circumstances as they evolve.	<p>The Bill proposes key principles in the Act such as:</p> <ul style="list-style-type: none"> restricted land applies to surface or subsurface activities that have a surface impact; specifies buildings that are restricted land (e.g. homes, schools); provides an outcomes based framework to determine if other types of buildings should be restricted land (i.e. determination by the Land Court); and provides flexibility in regulation making powers to define distances, buildings, activities and exemptions to adapt to circumstances as they evolve.
		287(2), 315(3), 355, 489(3) and 552(3)	Restricted land – Preliminary activities	<p>Cotton Australia submits: There is now potentially less opportunity to discuss key issues of concern to landholders now that a CCA is no longer required when preliminary activities, such as seismic surveys on private land are being undertaken. It is understood that a CCA can be unnecessary in some cases, however, where there is a potential for impact, environmental or to landholder operations, a CCA or other measure should be required to cover landholder concerns such as weed management.</p> <p>The suggestion in the Department of Natural Resources and Mines Summary of the Bill (p12-13) that landholders with concerns about preliminary activities on their property “contact the company to discuss a mutually agreeable outcome” is not a solution to the remnant issues, such as appropriate weed management, that were formerly addressed within CCAs.</p>	<p>Currently a conduct and compensation agreement (CCA) is required for any activity within 600 metres of a school or occupied residence (600 metre rule). Preliminary activities outside 600 metres do not require a CCA. Preliminary activities involve walking, driving along an existing road or track, taking soil or water samples, geophysical surveys not needing site preparation, some types of minimal impact surveys and survey pegging.</p> <p>Anything else is an advanced activity which includes drilling, clearing, road construction and seismic surveying using explosives. Any advanced activity requires a CCA.</p> <p>Under the changes proposed by the Bill, a CCA would not be required for preliminary activities anywhere on a property. However, within the restricted land distance, the landholder has the right to withhold consent to most activities being undertaken within that distance.</p> <p>While the actual restricted land distance is proposed to be prescribed by regulation, consultation on a proposed distance of 200 metres for exploration and production authorities was undertaken. If this was adopted, it would mean that a CCA for preliminary activities would no longer be required between 600 and 200 metres. Within 200 metres, owners and occupiers would have the right to withhold consent or impose any conditions, and in addition a CCA would be required for any advanced activities.</p> <p>The 600 metre rule does not adequately provide for weed management as a preliminary activity can currently take place anywhere on a property outside 600</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					metres from residences without a CCA. Regulation of weed management is provided under other frameworks, including the Land Access Code and mandatory conditions under the Mineral Resources Regulation 2013.
		418 and 419	Notification and objections	Cotton Australia is extremely concerned that notice provisions and rights of objection will be curtailed significantly under the Bill for mining projects. Given that a number of coal projects are proposing to operate on or undermine highly productive agricultural land, including laser levelled irrigation land, these changes have the effect of removing legitimate notices and rights for landholders to object to proposals that damage their business, infrastructure and assets irreparably. We refer the Committee specifically to the Shine Lawyers submissions on these provisions.	Coal projects do not meet the eligibility criteria and therefore must be made as a site-specific application for an environmental authority. Therefore, there is no curtailment of community rights for the environmental authority for these projects.
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy boreholes - Impact on bores used by landholders as back-up water supply in drought	The current provisions in the Bill relating to remediation of legacy bores are quite loosely drafted, particularly where they relate to non-emergency or safety related remediation. Cotton Australia is keen to ensure that landholders are consulted before any work is undertaken as many bores that are not used regularly are part of back-up water supplies in times of drought.	The department thanks Cotton Australia for its submission. It is noted that it is intended for the State authorisation to be used for urgent remediation of legacy boreholes that present a safety concern. In the event emergency action is taken, landholder notification is required. It is also anticipated that landholders will generally be the party to identify the safety concern requiring remediation action. In the situation where the holders of tenure decide to remediate boreholes that do not present safety concerns, existing requirements for conduct and compensation agreements, access and notification apply, thereby ensuring that landholders are consulted.
7	The Wilderness Society	Refer to Table 3			
8	QGC Pty Ltd	Chapter 4	Overlapping tenure	As an active participant in the dual-industry Working Group that prepared the White Paper, QGC is strongly supportive of the principles articulated in the Queensland Resources Council Report, Maximising Utilisation of Queensland's Coal and Coal Seam Gas Resources - A New Approach to Overlapping Tenure in Queensland (May 2012) (the "White	The department thanks QGC for its submission and notes its concerns. The department has also responded to APPEA's submission to the Bill and is working with APPEA and QRC and other key stakeholders to address matters raised.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>Paper") and welcomes Government's commitment to enacting legislation to adopt the White Paper framework.</p> <p>QGC has contributed to and supports the submission made by APPEA in relation to the Bill. APPEA's submission highlights a number of areas where the Bill either deviates from, or omits key elements of, the White Paper framework. All elements of the White Paper framework should be reflected in the legislation - the framework was expressly presented as a "package" in the White Paper, with each element being central to the dual-industry consensus reached through the White Paper process.</p>	
		Chapter 3, part 7	Land access - Expanded jurisdiction for Land Court	<p>Subdivision 3 of the MERCP Bill relates to powers for the Land Court to consider whether access to land is reasonable. It is QGC's view that this section of the Bill should be amended to clarify that the Land Court has powers to decide only whether or not the conditions of access are reasonable, not that the Land Court is able to prohibit access to a property by a resource authority holder.</p>	<p>This provision has been migrated across from the existing resources Acts and it maintains the status quo. The Bill does not amend or expand the Land Court's power to consider whether access is reasonable or reasonably required.</p> <p>It should be noted that this clause only relates to land used to reach the area of a resource authority, not the land subject to the resource authority. The Land Court must consider whether the proposed access is reasonable, among other criteria.</p>
		94	Land access - Expanded jurisdiction for Land Court to consider conduct issues	<p>Suggest that the Land Court already has broad powers to impose conditions within a CCA, and therefore the expansion of the Land Court jurisdiction to enable consideration of conduct issues is unnecessary.</p>	<p>Clause 94(2)(c) provides that the Land Court can decide the resource authority holder's obligations or limitations when carrying out authorised activities on the eligible claimant's land.</p> <p>The department is committed to implementing the LAIC Report recommendations, including recommendation 1(b) requiring legislative change to expand the jurisdiction of the Land Court to allow the court to make determinations on matters relating to conduct issues. This will ensure the Land Court has clear jurisdiction to resolve a CCA where conduct issues cannot be agreed.</p>
		80	Land access - General Liability to Compensate	<p>Clause 80 of the MERCP Bill relates to the resource authority holder's general compensation liability. However the drafting of this provision needs to clearly articulate the costs which are intended to be captured.</p> <p>QGC is broadly supportive of meeting a landholder's reasonable and necessary travel expenses but does not support a requirement to pay for owners' time to negotiate</p>	<p>Clause 80(4) provides a list of categories of effect for which compensation may be claimed This provision has been migrated across from the existing resource Acts and maintains the status quo.</p> <p>The Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and examined the issue of landholder</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				conduct and compensation agreements , other than where the loss of the landholder's time has resulted in additional expenditures (eg. the costs of labour hire).	time spent negotiating a land access agreement, and whether this should be a compensatable effect. The LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation.
		90 and 207	Land access - Recording agreements on title	QGC believe the requirement to note relevant agreements upon title would impose a significant cost and administrative burden, and should be optional at the landholder's request.	The purpose of LAIC recommendations requiring relevant agreements to be noted on title was to ensure that a prospective purchaser of a property is made aware that they exist and can investigate the terms and conditions that may apply to them as a future owner. This recommendation was developed by peak agricultural and industry representatives sitting on the LAIC, and originated due to stakeholder concerns about the potential for a property to change hands without a purchaser's knowledge that an agreement exists. To deliver certainty to prospective purchasers and give full effect to the LAIC recommendation, all relevant agreements will need to be noted upon title to eliminate this risk.
		84	Land access - No entry during minimum negotiation period	Clause 84 of the MERCP Bill would prevent a resource company from entering land to carry out advanced activities until the minimum negotiated period expires, even if the parties enter into an agreement before the end of the period. It is QGC's view that this is an unnecessary and unreasonable proposal, particularly because of its potential to override agreements reached between parties, and that this provision should be removed.	This provision has been migrated across from the existing resources Acts and maintains the status quo. Clauses 84 and 85 work together to establish a cooling-off period for the conduct and compensation agreement (CCA). This is a standard feature to contractual arrangements and protects the parties against any last-minute changes or "contractors remorse" if there is any doubt behind the agreement. This is particularly important as a CCA cannot be amended unless there is a material change or the parties agree to the change.
		Chapter 7, part 4, division 5	Overlapping tenure - Modification of particular provisions for Surat Basin area	The White Paper at section 4.1 on transitional arrangements for Grandfathered Production Tenure Applications described that the Working Group could not reach consensus on the application of new principles to existing production tenement applications and retention tenements. DNRM has chosen to find middle ground between the viewpoints adopting an arrangement similar to the approach for exceptional circumstances for high performing CSG wells and fields. Special transitional arrangements for a defined area of the Surat Basin take into account the importance of the Basin to the State's CSG-to-liquefied natural gas	The department thanks QGC for its submission and support of the proposed amendments.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>industry, and will provide certainty of future access for the coal industry.</p> <p>It should be noted that the three CSG-LNG project proponents, including QGC, made final investment decisions for their respective projects based in part on the legislative regime that existed in 2010/11 . Whilst the transitional arrangements defined in the Bill are not QGC's preferred position, we believe that the arrangements proposed under the Bill are workable.</p>	
9	Confidential				
10	Cape York Land Council	N/A	General	<p>The Cape York Land Council submits that there must be greater engagement with Indigenous groups and their representative organisations in any proposals for legislative or policy change. We again urge the State Government to develop a model for planning and stakeholder engagement for Cape York which ensures that Indigenous landholders and native title holders are properly engaged and represented.</p>	<p>The department thanks Cape York Land Council for their submission and notes their request for better engagement with indigenous landholders and native title holders. Based on this and other submissions the department is examining its consultation strategy with indigenous and native title group and examining models that are in place in other agencies for consultation a Native Title Expert Panel has also been established to provide advice in regard to the MQRAs program and working with the department's Aboriginal and Torres Strait Islander Land Services group. Once a better understanding is achieved of what is and isn't working within government further consultation will occur with indigenous groups to develop a better understand the broader consultation needs of indigenous people which will assist in informing how the department engages with them in the future.</p>
		Schedule 1 and clauses 418 and 420	<p>Land access – Definition of owner</p> <p>Notification and objections</p>	<p>That Cape York Land Council submits that our concerns about the failure of the proposed provisions to adequately accommodate the existence of native title rights and interests could be largely addressed if the Bill was amended to include native title holders as owners or occupiers or parties who may be affected by proposed activities on land. This would ensure that notification and objection provisions would be extended to those Indigenous people who assert the existence of native title rights and interests in relation to land.</p> <p>Native title groups should be included in the processes for access to public land, which is now to include reserve land. Native title rights and interests are likely to exist on reserve</p>	<p>The Commonwealth <i>Native Title Act 1993</i> provides for the interests of native title claimants, requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the consolidation of the resources legislation into a single Act. Additionally the Queensland <i>Aboriginal Cultural Heritage Act 2003</i> provides for the protection of aboriginal heritage and cultural practices.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				land in Cape York.	
		Chapter 3, part 4	Restricted land	In relation to restricted land, we oppose the proposal to grant tenure over the entire area including the restricted land. We are concerned that the requirement for written consent to enter the restricted land to carry out authorised activities before the tenure holder can conduct activities on that land will not be sufficient to protect the interests of Indigenous people with native title rights and interests in the land. Similarly, there is no protection for groups with native title rights and interests in neighbouring areas which may be affected by a resource activity.	The Bill preserves the constraints on miners undertaking activity authorised under a mining lease within land that is restricted land. No mining activity authorised by the granting of the lease can be undertaken within the area of restricted land without the owner's consent.
		80	Land access – General liability to compensate	The "eligible claimant" provisions in section 80 should include native title holders to ensure that where public or private land is being used for access to a resource activity, they are also able to seek compensation for any effect on their rights and interests.	This provision has been migrated across from the existing resources Acts and maintains the status quo. The Commonwealth <i>Native Title Act 1993</i> provides for native title interests, requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the consolidation of the resources legislation into a single Act. Additionally the <i>Queensland Aboriginal Cultural Heritage Act 2003</i> provides for the protection of aboriginal heritage and cultural practices.
		396	Pegging of boundaries	The proposed removal of the requirement for physical pegging of boundaries is not supported, as it has the potential to make it difficult for Indigenous parties potentially affected by an application to identify relevant areas. There are likely to be practical ramifications for land in the vicinity, as well as the actual land on which activity is to occur, such as damage to land caused by access. Cultural heritage rights may be affected.	The provision for alternatives to the marking of the boundaries of a mining lease and claim ensure that the proposed tenement is clear and unambiguous and capable of being realised on the ground. The Bill also provides discretionary power for the chief executive to require physical monuments in individual circumstances or to apply generally across areas of land. Cultural heritage is protected under the <i>Aboriginal Cultural Heritage Act 2003</i> and <i>Torres Strait Islander Cultural Heritage Act 2003</i> which are not amended by the Bill, and as a result no changes to protection afforded to cultural heritage will result from the Bill.
		398	Notification and objections – Affected persons	Changes to requirements for notification of mining lease applications (by limiting notification of mining lease applications to "directly impacted landholders, occupiers, infrastructure providers and local governments") may result in Indigenous people with native title or other interests in the	The Commonwealth <i>Native Title Act 1993</i> provides for the interests of native title claimants, requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the Bill.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				affected land not being aware of the application (particularly where native title has not yet been determined and land tenure has not yet been obtained). CYLC submits that public notification of all ML applications should be maintained or that Indigenous people with interests in an area should be included in the process as "directly affected landowners".	
		Chapter 9, part 3	Notification and objections – Standard and variation applications	We submit that public notification of standard applications and variation applications for an environmental authority for a mining activity under the <i>Environmental Protection Act 1994</i> should be maintained.	<p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
11	QCoal Group	223 and 224	Overlapping tenure – Existing applications under Mineral Resources Act, chapter 8	<p>Issue 1:</p> <p>With respect to the transitional provisions, where consent (whether the consent was obtained prior to the Mining Lease (ML) application or during negotiations) with an overlapping ATP holder has been given, then those ML applications should proceed to grant and operate under the pre-amended Mineral Resources Act (MRA) provisions. The ATP holder at the time of an existing lodgement gave consent or entered an agreement with full knowledge of the commercial consequences of that decision and it is unreasonable for an ML applicant to start a whole new overlap process again in those circumstances. The rights of the ATP are therefore not affected by this change and it also protects the rights of the ML applicant at time of application.</p> <p>In the circumstance of one of QCoal's major projects that is</p>	<p>Issue 1:</p> <p>The department notes QCoal Group's concern that an ML application, at the time of commencement of the Bill, should remain under the pre-amended <i>Mineral Resources Act 1989</i>. The department is working closely with internal and external stakeholders to resolve this matter.</p> <p>Issue 2:</p> <p>The department notes QCoal Group's concern regarding the legislative rights of the production tenure holders at the time of application. The department is working closely with internal and external stakeholders to resolve this matter.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>in the last stage of Mining Lease approval, the Bill as it stands will lead to significant and unnecessary delays to the "proposed mining commencement date" (section 113 of the Bill). The flow on effect from this is that royalties and local and regional economic benefits will also be delayed.</p> <p>Issue 2:</p> <p>The Bill should clearly state that it does not seek to change the rights of production tenure holders at the time of application, i.e. as of the date of the ML application/PL application the MRA provisions of the time should apply. For example, if at the time of an ML application there were no ATP holders and an ATP holder was granted prior to ML grant, then the subsequent ATP holder should gain no additional rights from the commencement of this Bill.</p>	
		127	Overlapping tenure – Joint Development Plans	<p>Issue 3:</p> <p>Section 127 of the Bill states the requirements for a Joint Development Plan (JDP). At the time of agreeing the JDP the ML tenure holder must identify the initial mining area (IMA) and each rolling mining area (RMA). The IMA is for 10 years and each RMA can only be for 1 subsequent year. It is unreasonable for a ML tenure holder to predict yearly mine plans, and therefore RMAs, in excess of 10 years in the future.</p> <p>The RMAs and therefore the JDP will continually be amended to reflect current mine planning status, which introduces a significant layer of red tape. This will result in significant administrative impacts and costs on the mining and petroleum parties and also the State.</p> <p>Solution for Issue 3:</p> <p>Provide a mechanism outside the JDP to identify and update RMAs.</p>	<p>The department notes QCoal Group's concerns with the requirements of clause 127 of the Bill. However, the proposed legislative amendments have been developed to reflect the policy position as provided in the White Paper. Concerns with the requirements of an agreed joint development plan under clause 127 have been raised by other submitters and the department is investigating options for providing more flexibility around the requirements as established in clause 127.</p> <p>It is important to note that the occupancy of an IMA is not for 10 years but rather, as provided by clause 107(2) the size or area of an IMA is to be based on 10 years' worth of mining operations. Similarly, with an RMA, clause 109(2) provides that the size or area of an RMA is to be based on one year's worth of mining operations.</p>
		113	Overlapping tenure - What is proposed	<p>Issue 4:</p>	<p>The department notes QCoal Group's concerns with clause 113(2) of the Bill. However, the proposed legislative amendments have been developed to reflect the</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			mining commencement date	<p>Section 113(2)(b) of the Bill states that where an application for a Mining Lease is over an existing Petroleum Lease then the proposed mining commencement date is at least 11 years after the date of the advanced notice. This will sterilise vast areas of coal resources as 11 years is manifestly long and unworkable.</p> <p>Solution for Issue 4:</p> <p>Reduce the period under section 113(2)(b) of the Bill to 18 months as per section 113(2)(a).</p>	<p>policy position as provided in the White Paper. The rationale provided in the White Paper is that the notice period will allow the PL holder to maximise gas extraction and extract the bulk of production and economic benefit from petroleum wells and associated infrastructure before it is required to abandon those facilities and give the right of way to the ML holder.</p> <p>It is important to note that the notice period of at least 11 years provided for in clause 113(2) only applies to the area of sole occupancy and that flexibility exists in clause 114(2) for the parties to agree to a time frame that is less than 11 years.</p>
12	Queensland Murray-Darling Committee Inc.	N/A	General	<p>QMDC's major concern is that industry remains the driver for licensing regulatory reform and the argument for amending the current law is still couched in terms such as reducing compliance and administrative costs to industry and government. QMDC does not consider economic or fiscal arguments supporting this Bill are either well-articulated or factually proven but are rather formulated from an industry dominated position and worldview.</p> <p>QMDC continues to assert the starting point for reform must be ensuring environmental protection and sustainability objectives are furthered by reform and not watered down because industry is having issues with the costs or the requirements of compliance. If there is a better way to ensure compliance with these objectives QMDC believes the protection of the environment must be the baseline from which any reform needs to start. A comprehensive understanding of the projected impacts of industry and business and compliance with legislation and regulation in the QMDB should be explored in relation to the impact on the region's natural resources and other assets as identified in the Regional NRM Plan.</p> <p>Overall QMDC is concerned that the drive to reduce regulation for the mining and energy industries and all the other associated legislative change is swimming against the tide of community expectations of government and will likely adversely affect agricultural production in Queensland. As</p>	<p>The department thanks the Committee for its submission. The approach taken in the Bill reflects government policy. There will be no net decrease in the protections for or management of impacts on the environment as a result of the Bill.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				agriculture is one of the Four Pillars of economic development any impact on profitable land use should be viewed seriously.	
		Bill as a whole	Fundamental legislative principles	<p>The claim that the Bill will enable community, owners, occupiers and public land managers to “have a greater say” is contradictory to legal and social analysis of the Bill’s clauses. The Explanatory Notes acknowledge breaches of, and the undermining of, fundamental legal principles and public objection rights. Arguments by government attempting to counteract those breaches are in our opinion poorly articulated and completely undervalue the important role of community groups to represent public interests.</p> <p>QMDC is concerned that many of the clauses contained in the Bill do not have sufficient regard to the rights and liberties of individuals and the public. The abrogation of rights and liberties from current law must be justified, whether the rights and liberties are under the common law or statute law. The Bill has abrogated many of the rights of landholders which exist in both common law and statute, for example, the basic right to unhindered and peaceful use and enjoyment of private land, the right to object to a proposed mining lease, and the right to withhold consent for restricted land within a mining lease. The poor justification, provided within the Explanatory Notes does not adequately defend the abrogation of the rights of landholders by the Bill.</p> <p>Additionally, many of the clauses of the Bill are inconsistent with the principles of natural justice. For example, a person or local community who is impacted by the activities of a mining lease but does not fall within the definition of an “affected person” cannot object to the granting of that mining lease.</p>	The department acknowledges that some of the proposed amendments in the Bill may be construed as (potential) breaches of section 4 of the <i>Legislative Standards Act 1992</i> . The <i>Legislative Standards Act 1992</i> does not establish fundamental legislative principles (FLPs) as rules of law but rather as important guiding principles to be observed in drafting legislation. In having regard to FLPs, the purpose of the <i>Legislative Standards Act 1992</i> to be achieved is that of ensuring Queensland legislation is of the highest standard. Sometimes, an amendment may be inconsistent with a FLP to achieve important policy objectives. The approach taken in the Bill reflects government policy.
		N/A	Public resource managed for public interest	Minerals are taken to be the property of the Crown and held by the Crown as a common resource. This Bill however does not comply with this legal obligation. The Bill effectively subsumes the rights of citizens or the public underneath the	The approach taken in the Bill reflects government policy.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>interests of industry.</p> <p>QMDC argue that a public resource should be managed for public good. The policy focus of the Bill should therefore focus on this, instead of being primarily concerned with company profit and regulatory obligation. Mineral resources because they are a public resource should require equal consideration by the state government to consult with key organisations and bodies that represent community economic interests. This is clearly absent in the Bill and continues to result in the mining sector and government denying key opportunities for companies to develop a much needed "social license to operate".</p>	
		3	MQRA Program - Assessment of regulatory burden	<p>The transitional process and ongoing reforms and repeals indicate there will be an increase in administration cost. This cost to the public has not been estimated or considered.</p>	<p>There will be a level of disruption to all stakeholders during the transition to a common resources Act under the MQRA Program. However, the department is of the view that the long-term benefits to business, the community and government are worth this short-term inconvenience.</p> <p>The expected benefits include: simpler and more cost effective delivery of online administration of the resources sector; improved investment attractiveness through faster processing times as staff can be directed towards peak workloads regardless of resource type; and a simplified regulatory framework under one Act that allows all stakeholders, especially the community, to have a greater understanding of resource authority administration.</p>
		N/A	General - assessment of regulatory burden	<p>Throughout the Bill's Explanatory Notes there is a presumption regulation is a burden and unnecessary. QMDC is most concerned that the community is being asked to support the argument that there is a "regulation burden" for mining companies without providing evidence that this is indeed a fact. QMDC, on the contrary would argue regulation is not stringent enough, and that more controls, for example, are required on exploration, including the establishment of no-go zones.</p> <p>The cost of regulatory process to industry is only one component of wider socio-economic issues relevant to mining. Governments must factor in regulatory burdens on landholders, which result in decreased productivity and</p>	<p>The assessment of regulatory burden is undertaken in accordance with the government's Regulatory Impact Statement System Guidelines. Any assessment of regulatory burden is oversights by the Office of Best Practice Regulation who has reviewed the department's assessment of that burden for each part of the Bill.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				efficiencies of existing farms or other businesses likely to be impacted. This in QMDC's opinion, makes a stronger argument for no-go zones, rather than reduced regulation.	
12	Queensland Murray-Darling Committee Inc.	Chapter 9, part 3	Notification and objections	<p>Notification of mining leases to [neighbours, local community and public interest groups] should be mandatory and not removed from the EPA, including standard applications and variations of an environmental authority for a mining activity.</p> <p>If only 'high risk' mines will be publicly notified for objection on environmental grounds, this means that for 90% of mines existing public objection rights will be lost.</p> <p>A clear definition [of low risk and impacts] is required to show how it will be determined that a low likelihood of risks.</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either <i>the Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>
		68	Restricted land	Does not support the removal of landholder consent provisions currently in place for restricted land.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		Chapter 9	Amendments to Petroleum and Mineral Legislation	<p>QMDC does not support the amendments to:</p> <ul style="list-style-type: none"> • omit the requirement to lodge a notice about a petroleum discovery and its commercial viability; • extend the time allowable before Ministerial approval is required for continuing production or storage testing on a petroleum well; • allow the holder of a petroleum tenure to use CSG produced water for any purpose on or off tenure. 	<p>The QMDC have not given specific reasons for not supporting, nor given proposed recommendations, about these amendments. However, if read in the context of the rest of QMDC's submission, it would appear that QMDC are of the opinion that these proposed amendments would have a negative affect on the environmental management of authorised petroleum activities or on landowners whose land the activities are proposed to be carried out.</p> <p>In reality, these three proposed amendments will reduce regulatory impacts on the petroleum industry and the Government administrators of the Acts where these provisions currently reside. These proposed amendments will not affect the current environmental regulations to which a petroleum tenure holder must comply with when carrying authorized petroleum activities, nor landowners' rights as they currently stand.</p> <p>The omission of the requirement to lodge a notice about a petroleum discovery and its commercial viability is proposed as there are issues about 'when' petroleum is discovered, particularly when petroleum, that is Coal Seam Gas (CSG), is 'discovered'. This is because of the dewatering that unavoidably needs to occur from the coal seam to release the CSG in commercial amounts.</p> <p>Section 544 of the <i>Petroleum and Gas (Production and Safety) Act 2004</i> (P&G Act) and section 75Y of the <i>Petroleum Act 1923</i> (PA 1923) provide a definition for when CSG is said to be 'discovered'. The definition is as follows:</p> <p>"(1) If a [petroleum tenure] holder makes a petroleum discovery, the holder must, within 5 business days, lodge a notice of the discovery.</p> <p>(2) For subsection (1), if a [petroleum tenure] holder explores or tests for coal seam gas—</p> <p>(a) the discovery of the presence of coal seam gas in a coal seam is not, of itself, a petroleum discovery; and</p> <p>(b) the holder discovers coal seam gas only if it is actually produced from a petroleum well used for the exploration or testing."</p> <p>This definition does not align with the realities of CSG exploration and production. Most CSG exploration wells will result in a 'discovery' of CSG, even though, strictly speaking, no discovery notice need be submitted under section 544 of the P&G Act and section 75Y of the PA 1923 because of the definitions of a CSG discovery provided for in these sections.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>Also, the value to the Government of requiring these notices is also questionable when not read in context with other related information. Much of the information that can be obtained from these notices is submitted by petroleum tenure holders in other notices, reports or documentation already statutorily required under the P&G Act and the PA 1923.</p> <p>A notice from a petroleum tenure holder, advising the chief executive of a petroleum discovery, is referred to as a 'notice of discovery'. A notice from a petroleum tenure holder, advising the chief executive about whether or not petroleum production from the reservoir the subject of the notice is commercially viable, or potentially commercially viable, is referred to as a 'notice of commercial viability'.</p> <p>The following lists the number of these types of notices, received by the Department of Natural Resources and Mines (DNRM) for the last 42 months:</p> <ul style="list-style-type: none"> • For the year 1 January 2011 to 31 December 2011 there were 152 notices of discovery and 28 notices of commercial viability (total of 180). • For the year 1 January 2012 to 31 December 2012 there were 59 notices of discovery and 78 notices of commercial viability (total 137). • For the year 1 January 2013 to end of 31 December 2013, there were 88 notices of discovery and 22 notices of commercial viability (total 110). • For the year 1 January 2014 to end of 30 June 2014, there were 24 notices of discovery and 1 notice of commercial viability (total 25; total 452 for 42 months). <p>The proposed amendment to extend the time before Ministerial approval is required for production testing reflects the realities of testing for production from a petroleum well, particularly if it is a CSG well. Gaseous hydrocarbon may be encountered in a natural underground reservoir once the drill bit of the drilling rig, drilling the petroleum well, intersects the reservoir. To evaluate the feasibility of petroleum production from this petroleum well certain tests are carried out on the well.</p> <p>One of these tests involves releasing gaseous hydrocarbon from the well through a choke (with a meter attached) of a known size at the surface of the well. The volume of gaseous hydrocarbon produced through the choke and flow rate displayed on the meter can help determine the commerciality of producing</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>petroleum from the well. The petroleum industry calls this test "production testing".</p> <p>Generally production testing needs to be carried out on a CSG well for a longer period than if the well was drilled to target other types of petroleum. This is because of the dewatering that needs to occur from the coal seam to release the CSG.</p> <p>Tests may also be conducted, via a petroleum well, to determine the suitability of a natural underground reservoir for storage of gaseous hydrocarbons. Rather than releasing gaseous hydrocarbons, a substance (a gas or water) may be injected into the well. This is called "storage testing" by the petroleum industry.</p> <p>Notices will still be required upon commencement of production or storage testing, enabling the administrators of the relevant Acts to monitor the testing and the amount of petroleum released or stored during this activity. The Ministerial approval served no useful purpose other than to obtain this information.</p> <p>Applications from the petroleum industry, requesting Ministerial approval for production or storage testing beyond the statutory 30 day allowable period, are referred to as 'applications to extend production or storage testing'. The following lists the number of applications to extend production or storage testing, received by the DNRM for the last 42 months:</p> <ul style="list-style-type: none"> • For the year 1 January 2011 to 31 December 2011 there were 172. • For the year 1 January 2012 to 31 December 2012 there were 248. • For the year 1 January 2013 to end of 31 December 2013, there were 604. • For the year 1 January 2014 to end of 30 June 2014, there were 45. <p>The growth in applications for approval would continue exponentially in the next 5 to 10 years as the CSG to liquefied natural gas plants come on line and more CSG wells need to be drilled to provide the feedstock for these plants.</p> <p>The amendment to allow the holder of a petroleum tenure to use CSG produced water for any purpose on or off tenure is merely a clarification of an amendment that was enacted in the <i>Land Water and Other Legislation Act 2013</i> (LWOLA). There was some uncertainty about whether the amendment made by this Act gave complete effect to the policy position in relation to associated water.</p> <p>Associated water is defined in the P&G Act as underground water that is taken or</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>interfered with during the course of, or as a result of, carrying out an activity for a petroleum tenure. This includes CSG water. Essentially, associated water is the 'by product' water of petroleum activities.</p> <p>Prior to the amendment made by the LWOLA, a petroleum tenure holder could provide associated water to a landholder whose land overlaps the petroleum tenure without further authorisation under the <i>Water Act 2000</i>. However, a water licence was required if the water was to be provided to another landholder whose property did not overlap the tenure.</p> <p>The original rationale for requiring the water licences became invalid due to the evolution of the adaptive management framework for petroleum activities from 2004 when Chapter 3 of the <i>Water Act 2000</i>, which deals with underground water management, was enacted.</p> <p>Potential impacts on groundwater systems from water extraction associated with petroleum operations are now addressed through chapter 3 of the <i>Water Act 2000</i>.</p> <p>In addition, the <i>Environmental Protection Act 1994</i> and the associated Environmental Authority for the operation, including approval requirements for CSG water for beneficial use, appropriately address potential environmental impacts associated with the use of associated water.</p>
12	Queensland Murray-Darling Committee Inc.	Chapter 3	Land access – Private land	QMDC recommends that all the proposed clauses related to conduct issues, conduct and compensation or opt-out agreements registered on land title and opt out options where established relationship exist need thorough consultation and reassessing.	The department notes QMDC's desire for thorough consultation and reassessing, and highlights that these amendments have resulted from a prolonged and extended period of review and consultation originating in the report of the <i>Land Access Review Panel</i> , which was released in July 2012, and the subsequent <i>Queensland Government Response to the report of the Land Access Review Panel</i> , the <i>Six Point Action Plan</i> , and finally the <i>Land Access Implementation Committee Report</i> .
		Chapter 3	Restricted land	The Bill proposes to significantly alter the definition of restricted land and with it alter landholder and public interest rights. Who determines whether an activity within 600m of a residence is a no or low impact? Impact should be determined on a case by case basis dependent on the health, safety, security and well-being of landholders, families and business owners affected and should require compensation for loss of privacy and enjoyment of one's	<p>The Bill introduces a consistent restricted land framework to apply to all resources Acts. For the first time, landholders affected by future applications by the petroleum and gas sector will gain the right to withhold consent to the majority of resource activities within close proximity to their homes and some business premises. The restricted land framework also applies to neighbouring buildings outside the boundary of the resource authority where the existing conduct and compensation agreement (CCA) framework does not.</p> <p>Once the landholder's consent has been obtained, a CCA is required before the</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				home or business surrounds.	resource authority holder may undertake advanced activities on the land. A CCA is not required for preliminary activities. Advanced and preliminary activities are defined by the Bill. Preliminary activities involve walking, driving along an existing road or track, taking soil or water samples, geophysical surveys not needing site preparation, some types of minimal impact surveys and survey pegging. Anything else is an advanced activity which includes drilling, clearing, road construction and seismic surveying using explosives.
		56, 356, 358	Land access – Public land (reserves)	QMDC does not support amending the MRA to remove the requirement for a 'reserve' owner's consent.	The requirement to obtain consent to enter 'reserve' land is unique to the MRA. While the Bill in general provides a consistent framework for public land access, the ability for the reserve owner to provide consent remains for mining leases and claims. Only exploration permits and mineral development licences are affected by the proposed change. Under the changes for these resource authorities, the consent of the public land authority will not be required. However the public land authority may impose conditions on the resource authority before any activities can be undertaken. The public land authority is best placed to consider the local public interests and impose conditions that are relevant to those interests.
		56	Land access - Public land	National parks and conservation reserves should be no go zones for mining and resource exploration.	The concerns raised by the QMDC are beyond the scope of the amendments in the Bill. However, it should be noted that exploration and production resource authorities cannot be granted over a national park under section 27 of the <i>Nature Conservation Act 1992</i> .
		58	Land access – Entry notice for public land	QMDC does not support the right to lodge a notice of entry with the public land authority before a resource authority is granted.	The intent of the change is to provide greater efficiencies for resource authority holders to reduce any potential delay to the operational commencement of the development. The amendment will allow, subject to the conditions imposed, for the resource authority holder to access the land and commence operations as soon as possible after the tenure is granted. While the resource authority applicant may give a notice to a public land authority, access to the land may not occur until the 30 day period has expired and the tenure has been granted.
		58	Land access - Entry to public land to carry out authorised activity is	QMDC does not support the public land access framework in the Bill, where only the public land authority is notified.	The requirement for resource authority holders to notify the public land authority (PLA), but not any occupiers of public land, is consistent with existing arrangements under all resource Acts except the <i>Mineral Resources Act 1989</i> .

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			conditional		As the PLA can place reasonable conditions on the entry to public land, it is appropriate that the PLA considers the requirements of occupiers in applying any conditions. They can liaise with relevant occupiers as required in developing conditions. To ensure the PLA can continue to undertake this role, the Bill clarifies that the PLA can apply conditions to address the requirements of occupiers.
		90	Land access - Particular agreements to be recorded on titles	Expressed concern that if something is written into title, it may tie successive landholders to an untenable agreement.	<p>Clauses 79 and 93, which have been migrated from the resource Acts, stipulate that access agreements, conduct and compensation agreements, road compensation agreements, or specified decisions of the Land Court, are binding upon successors and assigns.</p> <p>The purpose of clause 90 requiring certain agreements to be noted upon title is to ensure that prospective purchasers are well aware of relevant agreements that have been reached between the owner and a resource company, thus allowing them to make an informed decision when contemplating a purchase; something that is not currently available. Clause 90 does not affect the binding nature of the various agreements. This implements the recommendation from the LAIC which the government has committed to actioning.</p>
12	Queensland Murray-Darling Committee Inc.	414	Mining Applications	<p>QMDC supports government actions not to allocate exploration licenses for tenements that would be too small or too irregular a shape for efficient mines or production wells to be successful. QMDC however does not support the right to build up tenements in size without a full consideration of the impact on surrounding natural assets or land use by government.</p> <p>QMDC further recommends that when exploration leases expire a decision should be made based on current and cumulative impacts, whether those leases be renewed at all. Weight should be given to economic impacts of exploration as well as environmental impacts- the uncertainty created by exploration has dire and immeasurable impacts such as loss of confidence in future farm innovation and investment, succession planning, mental health stresses etc. (e.g. Felton, Cecil Plains). Mining companies economic analyses are notoriously poor and rarely consider base case scenarios such as loss of farm production.</p> <p>QMDC believe a clear definition is required to determine that</p>	<p>The effect of the changes in the Bill on the size of an application that can be applied for up to the 300 ha limit is to provide for a single application where previously six separate applications may have been required.</p> <p>Any application for a mining lease, regardless of size, is assessed against the requirements of the <i>Mineral Resources Act 1989</i> and the <i>Environmental Protection Act 1994</i>.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				a low likelihood of risks exists or is likely to exist. We are concerned, for example, that this will include turning the management of cultural heritage into a risk assessment rather than describing or defining it as a proactive response to a protected asset. QMDC asserts that if it is the government's intention to "streamline" the "duty of care" and "due diligence" this needs to be fully discussed and examined against cultural values.	
		386-390	Incidental coal seam gas	Benefits of not flaring gas are appreciated however use of ICSG must be conditioned as best practice and compliance assessed regularly.	The use of ICSG will be subject to the existing compliance frameworks under the <i>Mineral Resources Act 1989</i> , <i>Petroleum and Gas (Production and Safety) Act 2004</i> and the <i>Coal Mining Safety and Health Act 1999</i> . This includes requirements for safety, standards and reporting.
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy Boreholes	QMDC recommends that legacy boreholes are appropriately identified and mitigation or remedial works that need to be done are facilitated in collaboration with the landholder.	It is noted that it is intended for the State authorisation to be used for urgent remediation of legacy boreholes that present a safety concern. In the event emergency action is taken, landholder notification is required. It is also anticipated that landholders will generally be the party to identify the safety concern requiring remediation action. In the situation where the holders of tenure decide to remediate boreholes that do not present safety concerns, existing requirements for conduct and compensation agreements, access and notification apply, thereby ensuring that landholders are consulted.
		Chapter 6	Registers	Public access to the proposed one register is necessary in terms of creating confidence in the transparency of government decisions. Recommendation: QMDC recommends allowing public access to the proposed one register because it is necessary in terms of creating confidence in the transparency of government decisions.	Clause 187 of the Bill maintains the existing public right to access the register about resource authorities. This can be undertaken free of charge via the department's website.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		Chapter 4	Overlapping tenure - Right of way for coal	<p>Coal mining is not sustainable development. All efforts should be made by government to phase out coal mining in order to support a viable renewable energy industry; one based on sound social, environmental and economic grounds both locally and internationally espoused. This right of way is not supported because it is not the most profitable, sustainable use of a common resource.</p> <p>Recommendation:</p> <p>QMDC recommends a full reassessment of the coal mining right of way because mining it is not the most profitable, sustainable use of a common resource.</p>	The department thanks the Queensland Murray-Darling Committee Inc. for its submission and notes the views expressed. However, this part of the Bill is drafted consistent with the government's policy position.
		424	Mining lease – Restricted land	<p>QMDC recommends that technical non-compliance must be able to be defined and ascertained as part of due legal administrative process. Genuine mistakes or errors must be able to be rectified fairly. Amendments or changes must however be notified and trigger a different process if they alter the essence of the application and are not confined to genuine errors such as typos.</p> <p>QMDC recommends not allowing the granting of tenure over the entire area including restricted land, especially if written consent to enter restricted land is the only measure of control or compliance.</p>	The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.
13	AMEC	3	MQRA Program	AMEC is supportive of the MQRA Program, but the Bill must be closely scrutinized to prevent any unintended consequences to maintain a strong mineral exploration and mining sector in Queensland.	The department thanks AMEC for their general support for the proposed amendments.
		Chapter 3	Land access	<p>AMEC supports the introduction of the opt-out agreement, as it is crucial in recognising the excellent working relationships that many mineral exploration companies maintain with landholders.</p> <p>AMEC also supports the various other amendments to enable easier and quicker access to land across</p>	The department thanks AMEC for their support of the proposed amendments.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				Queensland, without increasing costs, or enforcing unwarranted compensation.	
		386-390	Incidental Coal Seam Gas	Proposed change to allow ICSG released during coal mining to be transported, sold and used beyond a specific mining lease is supported.	The department thanks AMEC for their support for the proposed amendments.
		Chapter 9	Notification and objections	<p>The proposed amendments to duplicative notification periods are regarded as a positive step for the Queensland Government seeking to increase the certainty for investors in the mineral exploration and mining sector. The repetitive opportunities for anti-development interest groups to attempt to re-examine the authority holder, simply reduces Queensland as an investment destination and devalues the issues of truly affected landholders.</p> <p>As such, AMEC supports the amendments the Bill proposes to limit objections to the Land Court directly to the land holders on site-specific environmental applications and very large scale developments. This provides some certainty to small scale mining operations and will save time and costs for the smaller scale developers in Queensland.</p>	The department thanks AMEC for their support for the proposed amendments.
		231 - 233	Overlapping tenure - Surat Basin	<p>AMEC has significant concerns regarding the amendments specifically sterilising the Surat Basin Transition Area for mining activities. The consequences of these changes will remove any possibility of exploration companies with tenements in this area to raise capital, in an already dire market for these small-cap companies.</p> <p>By giving gas companies until 31 December, 2016 to have a Petroleum Lease granted, the Queensland Government will essentially force all coal companies to abandon projects throughout the Surat Basin. Whilst it is understood the CSG industry is considered of strategic importance to Queensland, there is no logical argument to support the increase in a mining parties notice period to 16 years. Further to this, despite the stated intent for gas and coal companies to have the opportunity to negotiate a commercial</p>	<p>The department appreciates that the matter of transitional arrangements for the Surat Basin geographical area is a contentious issue for the resource industry. This is evident in the fact that the parties failed to reach an agreed position on the matter in the White Paper and turned to government to resolve this matter. In developing a policy position on the issues government has attempted to seek a 'middle-ground' position and remain consistent with the principles of the framework.</p> <p>Clause 114 of the Bill provides some flexibility for the parties to agree to a mining commencement date that is earlier than one that is provided in the chapter. However, there seems to be issues of clarity and interpretation with this clause. Therefore the department is investigating options to clarify that the parties may agree to a mining commencement date different to that established in clause 232, therefore making clear the opportunity for the parties to negotiate a truncated notification period.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>outcome in the Bill's explanatory notes, there is no opportunity within the Surat Basin Transition Area.</p> <p>AMEC regards this as a retrograde step and recommends that special protections for gas companies are not necessary, as the new framework in the Bill for overlapping tenures already provides 11 years of notification. At the very least, the Bill should be amended to ensure that there is the opportunity to negotiate a truncated notification period between gas and coal parties. As it currently stands, the Queensland Government will sterilise this area for in excess of 18 years and further reduce the attractiveness of investment in Queensland coal exploration.</p>	
		<p>Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7</p>	<p>Legacy Boreholes - proposal for Government to assume costs for emergency situations</p>	<p>The various amendments to set the protocol for addressing uncontrolled gas emissions from legacy boreholes are considered adequate by AMEC. The overarching industry concern was the risk associated with land access, and the costs of controlling a fire or capping boreholes.</p> <p>AMEC recommends that the Government needs to assume the costs of an emergency situation where a legacy borehole is aught or in need of remediation. These legacy boreholes are by their nature, not in use by a permit holder, and under the relevant regulation of the time the tenure was relinquished, were regarded by Government to be sufficiently rehabilitated. Current permit holders should not be penalised for past Government standards. Other methods to cover costs should be employed such as the Mining Rehabilitation Fund established last year in Western Australia, which seeks to progressively rehabilitate priority abandoned mine sites and associated features.</p>	<p>The department notes that the matter of costs associated with remediating legacy boreholes is outside the scope of the Bill.</p>
14	Ergon Energy Corporation Limited	33	<p>Dealings, caveats and associated agreements - Recording and removal of associated agreements</p>	<p>A party to an associated agreement should be entitled to apply to have an associated agreement recorded on the register so that any person acquiring an interest in the resource authority is aware of the existence of the associated agreement.</p>	<p>The policy objective of the associated agreement provisions is to provide the resources industry with a mechanism to record associated agreements on the public register against a resource authority. The department does not undertake any assessment of the agreement prior to registration and it is purely a service to industry.</p> <p>These provisions were established by the <i>Mines Legislation (Streamlining)</i></p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p><i>Amendment Act 2012</i> and provided that any entity could register an associated agreement. Since commencement of that Act, it has been identified that there needs to be a process to remove agreements from the register so that it remains accurate. Changing the ability to register agreements to the holder alone, allows these agreements to be readily removed with no additional cost to government or industry to implement.</p> <p>While the changes suggested by the submitter are not unreasonable, by allowing other entities to record agreements with consent of the holder and for the department to provide notices and consider objections from holders prior to registration or removal, would have implementation costs for the department. This would include development costs for online services and labour costs to process applications. These costs would need to be recovered.</p> <p>While this Bill provides that only the resource authority holder can register the agreement, it has never been compulsory for any agreement to be registered under these provisions. Therefore it has only limited value in providing awareness of agreements that may exist.</p> <p>Parties to an agreement other than a holder may wish to make it a condition of the agreement that the holder register it as an associated agreement, not remove it without their consent and specify the terms which apply if the condition is not met.</p>
		58	Land access - Entry to public land to carry out authorised activity is conditional	Ergon are concerned that the public land access framework does not protect the rights of occupiers of public land.	<p>The requirement for resource authority holders to notify the public land authority (PLA), but not any occupiers of public land, is consistent with existing arrangements under all resource Acts except the <i>Mineral Resources Act 1989</i>.</p> <p>As the PLA can place reasonable conditions on the entry to public land, it is appropriate that the PLA considers the requirements of occupiers in applying any conditions. The PLA can liaise with relevant occupiers as required in developing conditions. To ensure the PLA can continue to undertake this role, the Bill clarifies that the PLA can apply conditions to address the requirements of occupiers. It is also noted that there are restrictions and penalties in place under the <i>Electricity Act 1994</i> and associated regulations for proposed works near electricity infrastructure.</p>
		68	Restricted Land - Definition of Building	The definition of restricted land should define the term 'building' to include structures used for generating and transmitting electricity which should be protected from resource activities.	<p>While acknowledging the issues identified by the submitter, these have not been addressed by the Bill and the proposed land access framework maintains the status quo for this infrastructure.</p> <p>Any inclusion of electricity infrastructure such as power lines as restricted land</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					could significantly restrict resource activities. It is also noted that there are restrictions and penalties already in place under the Electricity Act 1994 and associated regulations for proposed works near electricity infrastructure.
		69	Restricted Land - Relevant Owner and Occupier	<ol style="list-style-type: none"> For any "restricted land", the Bill defines the person who is the owner or occupier of that restricted land (defined as the "relevant owner or occupier" in section 69 of the Bill). This relevant owner or occupier has the right to withhold or give consent (whether or not on conditions) to the holder of a resource authority carrying out. It is possible that the owner of the relevant building is not the owner of the land on which it is located. For example, for powerline towers, the owner of the towers will likely be an electricity entity such as Ergon Energy and not the owner of the land on which those towers are located. As the definition of "relevant owner or occupier" includes both owners and occupiers, it is likely that the owner of powerline towers would be an occupier of that building and the land on which it is situated. However, in order to put the matter beyond doubt, it is suggested that an additional paragraph be included in section 69 of the Bill which clarifies that for the purposes of section 69, the owner or occupier of a building may be different to the owner or occupier of the land on which the building is located. 	Clause 69 states that restricted land applies to both owners and occupiers. The definition of occupier under schedule 2 of the Bill states that occupier includes a person who has been given a right to occupy the place by the owner.
		71	Restricted land - Compensation Agreements and Mining Leases	<p>Section 71 of the Bill provides an exception to the need for consent from the relevant owner or occupier of restricted land. That exception is where the resource authority is a mining lease and the holder of the mining lease has entered into a compensation agreement with the relevant owner and occupier under section 279 of the <i>Mineral Resources Act 1989</i> (Qld) (MRA).</p> <ol style="list-style-type: none"> The proposed amendment to section 279 of the MRA 	<p>The department is of the view that it is a matter of statutory interpretation that for section 279 that a compensation agreement has the same meaning whether it is voluntarily entered into or ordered by the Court. In the circumstances envisaged by clause 429, that once compensation is resolved, the consent of the owner is no longer required, the amendment suggested by Ergon would result in a perverse outcome if section 71 did not apply to circumstances where the land Court ordered the amount and terms of compensation.</p> <p>The department is of the view that no amendments are required to sections 279A,</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>(contained in section 429 of the Bill) makes it unclear whether the exemption applies only to agreements voluntarily entered into by the parties or also where there is a determination of compensation by the Land Court. This inconsistency between section 71 of the Bill and the amended section 279 of the MRA should be clarified and should only apply to agreements voluntarily entered into by the parties.</p> <p>2. In addition, consequential amendments should be made to various sections of the MRA (such as sections 279A, 280, 281 and 283B) to ensure that those sections apply to relevant owners and occupiers of restricted land who receive compensation and not just owners of land.</p>	<p>280, 281 and 283B but will take the matter up with the Office of the Queensland Parliamentary Counsel to be certain.</p>
		418	Restricted land - Notice of Mining Lease Application	<p>While relevant owners or occupiers of restricted land in the area of a mining lease are entitled to compensation in respect of the mining lease, there is no right for such owners and occupiers to receive notice of the mining lease application.</p> <p>1. Section 418 of the Bill, which replaces section 252A of the MRA, provides that a mining lease notice must be given to "affected persons". The definition of affected persons includes owner and occupiers of land as well as entities that provide infrastructure within the area of the proposed mining lease. Owners, occupiers and entities that provide infrastructure will likely comprise the majority of relevant owners or occupiers of restricted land.</p> <p>2. Under the definition of "affected person" in section 418 of the Bill, there is the possibility that some relevant owners and occupiers of restricted land do not fall within the ambit of "affected person". For example, restricted land may be centred on a building on land adjacent to the mining lease and the area of the restricted land may extend into the area of the mining lease. In this instance the relevant owner or occupier of</p>	<p>Clause 418 inserts new section 252A(2)(c) & (e) to provide for an occupier or infrastructure owner to be notified of a mining lease application.</p> <p>If there is any infrastructure owned and operated by Ergon Energy or other infrastructure providers that meets the definition of restricted land, the resource authority holder will be prevented from undertaking any activity authorised by the issue of the authority within a prescribed distance from the feature unless Ergon Energy provides consent to the activities. This protection extends to features that trigger restricted land on land adjacent to the mining lease. As that protection is prescribed in law there is no additional need for the landholder of the adjoining land to be further notified.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>restricted land may not be an affected person and may not be entitled to receive a mining lease notice under the proposed replacement section 252A of the MRA.</p> <p>3. It is suggested that the definition of "affected person" in the proposed replacement section 252A(5) of the MRA also include "relevant owners or occupiers of restricted land".</p>	
		72	Restricted Land - Declarations of Restricted Land	The Bill should make it clear that a person who claims to be a relevant owner or occupier for restricted land under section 69 of the Bill is also entitled to apply for an order declaring whether or not the land is restricted land.	Under section 72, the owner or occupier of the land subject to a dispute about its status as restricted land can apply to the Land Court for a determination. As part of this process it is likely that the Land Court would consider the standing of the applicant under the definitions of owner or occupier provided in the Bill.
		420	Notification and objections - Objections to Mining Lease Applications	<p>The Bill (at section 420) limits the people who are able to make an objection to a mining lease application by replacing section 260 of the MRA. The people who may object to a mining lease application are now only owners of the land in the area of the mining lease, owners of access land and the relevant local council. However, there are other persons whose interests may be directly affected by the grant of the mining lease and these people should also have a right to object.</p> <p>1. It is suggested that the definition of "affected person" in the proposed new section 260 of the MRA be amended so that it is the same as the definition of "affected person" in the proposed new section 252A of the MRA (to also include "relevant owners and occupiers of restricted land" as suggested above) as these are the people who would be directly affected by the grant of the mining lease and should therefore have the right to make objections to the mining lease and to seek conditions on the grant of the mining lease or seek the refusal to grant the mining lease.</p> <p>2. This is particularly important for owners of electricity infrastructure such as Ergon Energy. At present, where a mining lease is proposed over powerlines or other electricity infrastructure owned by Ergon Energy, the</p>	Ergon Energy are included in a category of affected persons that will be entitled to receive notification of a mining lease (refer to clause 418 of the Bill) which affords them an opportunity to enter into early negotiations with the applicant and, as per their submission, to resolve any issues there may be relating to impacts on any infrastructure they own or manage. Together with the provisions of the <i>Electricity Act 1994</i> it is considered that electricity infrastructure providers are afforded with the necessary mechanisms to ensure that any impacts on electricity infrastructure are managed appropriately without the need to resort to the Land Court through the objection process.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>only means by which Ergon Energy can protect its interests is to object to the grant of a mining lease and/or seek conditions on the grant of the mining lease. If the right to object is taken away, the ability for Ergon Energy (and similar organisations) to protect their interests is significantly reduced. The suggested change above would ensure that Ergon Energy (and similar entities) would retain their rights and be able to take steps to properly protect their interests.</p> <p>3. A corresponding amendment will also need to be made to the proposed new section 260(4) so as to clarify the grounds of objection that these additional categories of person can make.</p> <p>4. It is suggested that each of:</p> <ul style="list-style-type: none"> a. occupiers of the land; b. relevant owners and occupiers of restricted land; and c. an entity that provides infrastructure wholly or partially on land the subject of the proposed mining lease, <p>be entitled to object to a mining lease on the same grounds as an owner of the land the subject of the proposed mining lease being the matters mentioned in section 269(4)(a), (b), (c) or (d)(i) or (iii) as all of these matters could be relevant to such persons.</p>	
		403	Land access - Accessing Mining Lease Land	<p>While the Bill deals with a number of issues around access to land, the Bill doesn't address an issue relating to access to land in the area of a mining lease (or mining claim) by owners and occupiers of that land.</p> <p>Section 403 of the MRA, subject to some exceptions, makes it an offence to enter the land subject to a mining lease (or mining claim) without the consent of the holder of the mining lease (or mining claim). The new regime in relation to</p>	<p>The department notes that there are a number of issues relating to the interaction between mining leases and electricity infrastructure, however most of these issues are outside the policy scope of this Bill.</p> <p>The intention of providing infrastructure providers with a copy of the application where they have infrastructure within or across a proposed lease is to enable the infrastructure provider to advise the mining company and for those companies to enter into negotiations to resolve any issues to the parties mutual satisfaction. It is considered that there are adequate remedies to resolve these issues without</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>restricted land is not consistent with this offence provision.</p> <ol style="list-style-type: none"> 1. The current section 403 is problematic for owners and occupiers of powerline towers and other structures or buildings used in the generation, transmission or distribution of electricity (electricity works). 2. Owner and occupiers of electricity works are prevented from entering, using or occupying land or from erecting any building or structure or making any other improvement on land the subject of a mining lease unless they have the consent of the holder of the mining lease. The only exception may be under section 403(2) of the MRA which allows them to enter and be upon the land (but not to use or occupy or to erect buildings or structures etc.) where authorised under an Act or law for the purpose of carrying out duties. 3. Accordingly, where the holder of a mining lease refuses consent (unless the owner or occupier of the electricity works has a right under an Act or law to carry out duties but noting that that right does not entitle them to use or occupy the land or to erect any building or structure or make other improvement to the land), the owner or occupier of the electricity works will be prevented from operating, maintaining or improving the electricity works. This could adversely affect supply to customers and the community and it could also adversely affect the health and safety of customers, the community and people on the mine site as a result of electricity works not being properly maintained and operated. 4. These potential outcomes are likely not intended by the MRA and the legislation should be amended to address these land access issues. 5. In addition, section 403 of the MRA is inconsistent with the changes to the restricted land provisions introduced by the Bill. Prior to the commencement of the Bill, restricted land was excluded from the area of the 	<p>having to resort to an objection process.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>mining lease where the owner of the restricted land didn't consent to the land being included and therefore section 403 of the MRA didn't apply to that restricted land and didn't prevent persons from entering that land. With restricted land now being included in the area of a mining lease (albeit with restrictions on the mining lease holder entering that restricted land), in order to ensure that rights are not diminished by the Bill, section 403 should be amended to ensure that owners and occupiers of restricted land have a continuing right to enter and use that restricted land notwithstanding the grant of a mining lease over that land.</p> <p>6. Other potential options to deal with the issue about entering land in the area of a mining lease and to ensure that mining lease holders cannot prevent persons with particular rights or needs to enter land in the area of a mining lease, such as owners and occupiers of electricity works , are as follows:</p> <p>a. The exception in section 403(2) of the MRA could be extended so that the whole of subsection (1) (and not merely (1)(a)) should not operate to prevent an authorised person from carrying out a duty according to an Act or the law. It is noted that this amendment alone would not be sufficient to ensure rights of access for the owners of electricity works.</p> <p>b. Section 403(2) of the MRA should not be limited to people carrying out duties under any Act or law and could be extended to include rights to enter, use and occupy the land and to erect and maintain buildings, structures and improvements.</p> <p>c. A specific exception could be included in section 403(2) of the MRA to allow owners and occupiers of electricity works to enter the land to operate and maintain those works and to erect replacement or extensions to those works. These owners and occupiers could be defined by</p>	

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>reference to the definition of "affected persons" introduced in the proposed new section 252A of the MRA as an entity that provides infrastructure wholly or partially on land the subject of the mining lease.</p> <p>d. A specific exception could be included in section 403 of the MRA to provide that a person may enter the area of a mining lease in accordance with the conditions of the mining lease. The conditions of mining leases could, whether in section 276 of the MRA or in the actual conditions imposed upon the grant of the mining lease, provide that the holder of the mining lease needs to allow certain persons, including the owners and occupiers of electricity works, to enter the area of the mining lease in order to exercise their rights and fulfil their obligations in relation to those electricity works. Further, the MRA could be amended to make it a requirement of the grant of any mining lease that the Minister impose such conditions as are necessary for the continued use and operation of electricity works by any owner and occupier of electricity works in the area of the mining lease.</p>	
15	Shine Lawyers	Bill as a whole	Departure from fundamental legislative principles	<p>The Bill has abrogated many of the rights of landholders which exist in both common law and statute – such as the right to object to a proposed mining lease, the right to withhold consent for restricted land within a mining lease, the right to peaceful use and enjoyment of the land etc. The justification, or lack thereof, provided within the explanatory notes does not adequately support the abrogation of the rights of landholders by the Bill.</p> <p>Further, in our view, many of the clauses of the Bill are inconsistent with the principles of natural justice. For example, a person who is impacted by the activities of a mining lease but does not fall within the definition of an "affected person" cannot object to the granting of that mining</p>	<p>The department thanks Shine Lawyers for their submission.</p> <p>The department acknowledges that some of the proposed amendments in the Bill may be construed as (potential) breaches of section 4 of the <i>Legislative Standards Act 1992</i>. The <i>Legislative Standards Act 1992</i> does not establish fundamental legislative principles (FLPs) as rules of law but rather as important guiding principles to be observed in drafting legislation. In having regard to FLPs, the purpose of the <i>Legislative Standards Act 1992</i> to be achieved is that of ensuring Queensland legislation is of the highest standard. Sometimes, an amendment may be inconsistent with a FLP to achieve important policy objectives. The approach taken in the Bill reflects government policy.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				lease. This is a clear example of a lack of consideration of the view of a third party whose rights are affected by action taken under legislation.	
		Bill as a whole	Legislation by Regulation	Grave concerns about the use of regulations proposed by the Bill. Use of regulations can be a means of ignoring sound legislative drafting techniques and good government. The items proposed to be subject to regulations should be in the Act so that there can be adequate public debate.	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>
15	Shine Lawyers	13	Land access - What is private land	Shine Lawyers is concerned that the definition of "private land" in the Bill may prejudice Aboriginal and Torres Strait Islanders.	<p>This provision has been migrated across from the existing resources Acts and maintains the status quo.</p> <p>Only the <i>Petroleum and Gas (Production and Safety) Act 2004</i> refers to the Aboriginal and Torres Strait Islander Land Acts when defining "private land". These references are not necessary to the definition as Aboriginal and Torres Strait Islander land falls within the second category of private land as "an interest in land less than fee simple held from the State under another Act".</p>
		39	Land access - Obligation to give entry notice to owners and occupiers	The drafting of the clause should be made consistent in its reference to owners and/or occupiers with regards to entry notice requirements.	The department considers that this clause achieves the policy intent.
				The obligation to provide the Chief Executive with a copy of the entry notice (as currently provided at section 495(3) of the P&G Act) has not been replicated in the Bill. In our view,	The department notes Shine Lawyer's concerns with the removal of the requirement for a resource authority holder to give a copy of an entry notice to the chief executive. However, the proposed legislative amendments in the Bill have

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				an impartial third party who monitors and ensures that companies follow and abide by the policy and procedures provided for in the legislation is crucial. We therefore submit that a provision equivalent to section 495(3) of the P&G Act be included at clause 39.	<p>been developed to meet the government's commitment to reduce regulatory burden.</p> <p>While the mandatory requirement to provide a copy of an entry notice to the chief executive has been removed, the ability for the department to impartially monitor the land access framework has been maintained, through the ability of the chief executive to request a copy, under clause 194 of the Bill, of any notice or consent given under chapter 3.</p>
		40(3)	Land access - Entry notices	Concerned the broad definition of "independent legal right" has the potential for abuse and increases the likelihood of future litigation in situations where the resource authority holder has entered the land based on a conversation with a landholder which has been misinterpreted.	The drafting of the provision has been modernised from the existing resources Acts which only refers to a "right". This "right" is further clarified by the Bill under clause 40(3) as an "independent legal right" which is a right to enter land that is enforceable under any law, including common law right, but does not include a right to enter the land under this Act or a resource Act. A contractual arrangement is provided as an example.
				Sub-section (1)(c) provides an exemption to the resource authority holder from giving an entry notice if the Land Court is considering an application under section 94. This proposal is in conflict with the current section 495(1)(b) of the P&G Act where the petroleum authority holder is obligated to give an entry notice at least ten (10) days before entry to the Land where the Land Court application exemption applies. Without the requirement to provide notice, the resource authority holder will effectively be able to enter the land as soon as the matter is referred to the Land Court without any requirement to provide notice of the anticipated entry. We therefore submit that the exemption be removed from the clause. This proposal would be an abrogation of landholder's rights and a lowering of resource authority holder's obligations. We think it only fair landholders be given notice.	<p>It was not the policy intent for an application to the Land Court under the relevant section to exempt a resource authority holder from providing an entry notice to an owner or occupier. In ensuring consistent terminology has been used when consolidating the land access requirements from the resources Acts, this provision has inadvertently been added.</p> <p>The department will seek to rectify this drafting error.</p>
				Further, sub-section (2)(a) of the Bill provides that the obligation to give an entry notice to enter and carry out an authorised activity on private land does not apply if the resource authority holder has a waiver of entry notice with each owner and occupier of the land. However, the note under sub-section (2)(a) provides that an owner or occupier of land may give a waiver of entry notice. In our view, the	The department considers that this clause achieves the policy intent.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				exemption provided under sub-section (2)(a) should only be available if a waiver of entry notice is given by each owner and occupier. Whilst this appears to be the intention behind the clause, it is confused by the note beneath it.	
		42	Land access - Right to give waiver of entry notice	Shine lawyers submits that a waiver of entry notice should only have effect if it is given by both the owner(s) and occupier(s) of the land.	<p>This provision has been migrated across from the existing resources Acts and maintains the status quo. Both owners and occupiers have a right to be given an entry notice under clause 39 (subject to exemptions under clause 40).</p> <p>The provisions provide the flexibility for an owner or occupier to determine their preferred arrangements. Adopting Shine Lawyers suggestion would essentially remove this option for owner and occupier's unless all parties agreed to a single agreement or arrangement. This approach is not in line with the Government's commitment to reducing regulatory burden or the intent of the land access framework to provide flexibility for the parties.</p>
		45	Land access - Right to elect to opt out	<p>The Land Access Implementation Committee clearly intended that "opt-out" agreements would only apply in very limited circumstances. In our view, an "opt-out" agreement offers very little benefit to a Landholder and provides little protection once signed. We also note that the Deferral Agreement framework is already in place and we therefore question the inclusion of a further framework which provides yet another avenue for a resource authority holder to avoid entering into CCA's with Landholders. Further, an "opt-out" agreement is unlikely to be any simpler than a CCA or Deferral Agreement could be.</p> <p>The clause itself lacks clarity and protection in crucial areas. We therefore submit that the following would improve the framework:</p> <ol style="list-style-type: none"> 1. Extend the cooling-off period to 20 business days; 2. Obligate the resource authority holder to compensate the Landholder for the reasonable and necessary legal, accounting and valuation fees incurred by the Landholder in negotiating the opt-out agreement; 3. Specify that a Notice of Intention to Negotiate (NIN) 	<p>The department notes Shine Lawyers concerns with the right to elect to adopt an opt-out agreement. However the proposed legislative amendment is designed to implement a framework which enables a landholder, at their discretion, to elect to enter into an opt-out agreement with the resource authority holder. If a landholder does not believe that an opt-out agreement is suitable in their circumstances, they are under no obligation to sign an opt-out agreement, and have the right to negotiate a CCA. The proposed amendments by the submitter would introduce uncertainty for resource authority holders and increase the complexity of what is intended to be a simple framework. Materials will be developed that will specify the consequences and risks of entering into an opt-out agreement to landholders so that all relevant information is provided prior to any decisions being made to opt-out.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>must first be provided by the resource authority holder, following which the Landholder may elect to enter into an opt-out agreement;</p> <ol style="list-style-type: none"> 4. Specify that the opt-out agreement will only apply to the activities provided for in the NIN and to the extent identified on the map; 5. Enable the Landholder to call upon the resource authority holder to enter into a CCA for the activities provided for in the opt-out agreement; 6. Enable the Landholder to unilaterally terminate the opt-out agreement where they have a reasonable excuse; 7. Insert a provision, rather than a note, that the resource authority holder still has a compensation liability under section 80. <p>Without knowing the specifics of what an "opt-out" agreement will contain it is difficult to provide further submissions on this issue, however, if it is to contain the compensation to be received it is crucial that an eligible claimant be afforded the opportunity to receive professional advice before entering into the agreement.</p>	
15	Shine Lawyers	47	Land access - Limited access to private land outside authorised area	Shine Lawyers questions the necessity for the access land framework to apply to exploration permits under the <i>Mineral Resources Act 1989</i> .	The Bill is drafted consistent with the government's policy position to develop a consistent framework across all resource types. This provides a consistent approach to allow all resource authorities to cross land to access the authority area. Exploration permits under the Mineral Resources Act 1989 had no such statutory mechanism.
				Shine Lawyers suggests that access agreements should be in writing only.	<p>The ability for the agreement to be made orally or in writing ensures that there is sufficient flexibility in the framework to accommodate different access scenarios. The framework allows the parties to decide how to record their agreement based on the nature and duration of the activities required for access.</p> <p>To amend the requirements to mandate all agreements be in writing is likely to introduce unnecessary regulatory burden for the parties.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		50(2)	Land access - Additional topics for access agreements	Access agreements to cross land to reach a resource authority that vary the entry notice obligations should be in writing, especially if they are to bind successors and assigns.	<p>This provision has been migrated across from the existing resources Acts and maintains the status quo.</p> <p>These access agreements may be made orally to not force a regulatory requirement for those who choose to make such an agreement. The access may be temporary and at short notice where agreement is readily provided.</p> <p>If there is any substantive works undertaken by the resource authority holder to establish the access or the access is critical to the resource activities, the department suggests that agreements should be in writing. It would be in the parties best interests to ensure this is the case.</p>
		50(3)	Land access - Additional topics for access agreements	If the access agreement to cross land to reach a resource authority includes a CCA, do the processes that apply to CCAs generally also apply (i.e. chapter 3, part 7, division 2)?	Yes, chapter 3, part 7, division 2 concerning provisions for conduct and compensation agreements (CCA) may apply. Under clause 80, a resource authority holder is liable to compensate each owner and occupier of land crossed to reach a resource authority (access land).
		14 and 15	Land access - Public land	The Bill does not offer any protection to landholders who are technically unlawfully occupying public land. Shine Lawyers urges the government to re-consider and re-draft the provisions accordingly.	The concern raised by Shine Lawyers is beyond the scope of the Bill and the resources Acts.
		Chapter 3, part 4	Restricted land	<p>Welcome the introduction of the principle of restricted land to the petroleum and gas industry but are extremely concerned with several areas of the framework and how it will actually benefit landholders affected by future applications by the petroleum and gas sector.</p> <p>Will overall reduce the rights of landholders affected by mineral and coal sector.</p>	<p>The department thanks Shine Lawyers for their in-principle support for the proposed restricted land framework.</p> <p>For the first time, landholders affected by future applications by the petroleum and gas sector will gain the right to withhold consent to the majority of resource activities within close proximity to their homes. The restricted land framework also applies to neighbouring buildings outside the boundary of the resource authority where the conduct and compensation agreement (CCA) framework does not.</p> <p>For landholders affected by the mineral and coal sector, the department has consulted on a proposed restricted land distance of 200 metres. This is double the existing distance under the Mineral Resources Act 1989. While stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply, will no longer be restricted land, this infrastructure is already managed under the CCA framework for the petroleum and gas sector. The proposed changes ensure that this approach is consistent across all resource sectors.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		67	Restricted land - Definitions	Definition of pipeline should be included in the Act to give effect to the description provided in the Explanatory Notes.	The Explanatory Notes for this clause state that the meaning of pipeline for the purposes of the clause does not include ancillary surface infrastructure. Section 14B of the Acts Interpretation Act 1954 provides that Explanatory Notes may be used to assist in the interpretation of an Act however the department will consider the recommendation.
		67	Restricted land – Pipeline exemption	The installation and maintenance of an underground pipeline should not be exempt from restricted land. These activities involve use of machinery, high levels of dust, noise, and could cause subsidence and other dangers.	<p>This aspect of the restricted land framework is to minimise surface impacts on landholders while recognising that in some areas, underground pipelines and cables may be best suited to be installed in corridors that can be in relatively close proximity to buildings. The main impact relating to the underground cable or pipeline on the landholder is the excavation, installation and backfilling of the trench. This would need to be completed within 30 days.</p> <p>The resource authority holder would still need a conduct and compensation agreement, satisfy safety requirements for gas pipelines, and meet any conditions of its environmental authority with respect to noise, dust etc. The proposed framework reflects the current regulatory requirements for this type of activity for landholders affected by the petroleum and gas industry.</p>
			Restricted land - Exemptions	The <i>Mineral Resources Act 1989</i> restricted land framework does not provide exemptions. Concerned with this use of regulations as these details should be made available for public comment.	The use of regulations in this proposed framework is to allow for flexibility to adapt to circumstances as they evolve, particularly as this will apply to future applications from the petroleum and gas industry for the first time.
			Restricted land – Prescribed distance	The “prescribed distance” for restricted land is of crucial importance to the interpretation of the clause and valuable submissions on the adequacy of the framework cannot be made without this detail. Concerned this will be in regulations rather than Act.	<p>This and related clauses propose a framework that at its basic level requires resource authority holders to obtain the consent of landholders and occupiers before activities can be undertaken within a certain distance from homes, schools, buildings for business purposes etc. The clause proposes that the actual distances be prescribed by regulation as this can vary depending on the activity type or the type of building or area. The department is of the view that this detail is appropriate to be prescribed by regulation and this aligns with the direction in this Bill to achieve a better balance and effective use of regulations in comparison with the rigid, prescriptiveness of the existing resources Acts.</p> <p>While the distances for restricted land are proposed to be prescribed by regulation under clause 67, a distance of 200 metres has been consulted on in a Regulatory Impact Statement to apply for any exploration and production authorities (e.g. exploration permits, authorities to prospect, mining leases, petroleum leases etc.)</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					and petroleum facility licences, and 50 metres for all other resource authorities including data acquisition authorities, water monitoring authorities and survey licences.
		68	Restricted land – Definition/application	Removing stockyards, bores and other watering points from the definition of restricted land will significantly disadvantage landholders and is considered a huge abrogation of rights.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
		68	Restricted land	With respect to clause 68(1)(ii)(C), we are concerned that the definition thresholds contained in the Environmental Protection Regulation 2008 (the EPR) are insufficient and do not meet the intent of the clause or offer adequate protections for landholders. For example, a piggery consisting of 380 standard pig units would not qualify as restricted land under the clause. We propose that restricted land be applied to animal husbandry operations that do not meet the intensive requirements of the EPR, as the activities of the resource authority holders will have the same impacts on mid-sized operations as they do on large scale operations.	<p>The Environmental Protection Regulation provides thresholds for these types of activities that are regulated under the environmental protection framework. These types of activities are specifically being included in the restricted land framework to recognise the significance of these activities and that they should have a higher level of protection.</p> <p>This proposed inclusion seeks to strike a balance between these intensive animal husbandry and aquaculture activities and resource activities. Aquaculture and animal husbandry activities that fall short of the 'intensive' threshold will still be afforded the protections under the conduct and compensation agreement (CCA) framework that currently applies.</p>
		68	Restricted land – Point when it applies	<p>The proposal for restricted land to only apply at the time of grant places the rights of landholders behind the interests of those extracting the common resource.</p> <p>For example, if a residence is completed 2 weeks after grant of an authority to prospect, the holder can undertake seismic survey as close to a residence as they wish. It is huge abrogation of the rights of landholders and should be removed.</p> <p>This requirement does not exist under the <i>Mineral Resources</i></p>	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity.</p> <p>Restricted land is a new scheme for the petroleum and gas sector; providing additional rights for landholders and occupiers to give consent for activities within a given distance. Regardless of whether restricted land applies, the conduct and compensation agreement (CCA) framework has, and will continue to apply for advanced activities. In the case of the example given, the authority to prospect holder in carrying out a seismic survey would need to have a CCA if it was an</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<i>Act 1989</i> with respect to exploration permits or mineral development licences.	<p>advanced activity and also the proximity of the activity would also be governed by conditions on the environmental authority regarding noise, dust, vibration etc.</p> <p>Under the proposed framework, there are differences from how restricted land currently applies under the <i>Mineral Resources Act 1989</i>. For mineral and coal exploration permit holders restricted land will apply from the time of grant, rather than at any time. There is also a change for mining claims and leases, and mineral development licences, where restricted land will apply from the time of grant, rather than when the application is lodged.</p>
		68	Restricted land - Regulations	<p>Does not support this regulation-making power as this should be addressed in the Act.</p> <p>The examples provided in the Explanatory Notes provide little certainty and that they should be considered restricted land.</p>	<p>The use of regulations in this proposed framework is to allow for flexibility to adapt to circumstances as they evolve, particularly as this will apply to future applications from the petroleum and gas industry for the first time.</p> <p>The examples provided in the Explanatory Notes of buildings that could be prescribed as those which restricted land would not apply; include a pump shed, hayshed or roadside stall. While this is a matter for consideration during development and consultation on regulations, these examples were provided to give some context to the types of buildings restricted land would be unlikely to apply.</p> <p>In achieving a balance between the interests of landholders and the resources sector, it is considered that these types of structures can be readily managed under the conduct and compensation agreement (CCA) process, as they currently are for the petroleum and gas sector.</p>
		70	Restricted land - Consent required for entry	<p>The inclusion of conditions given to enter restricted land as a condition of the resource authority is welcomed.</p> <p>However, the inclusion of a consequence for breaching the conditions would also be beneficial.</p>	<p>The department thanks Shine Lawyers for their support for the proposed provision.</p> <p>A breach of a condition of a resource authority triggers the non-compliance action provision under the relevant resource Act. For example, under the <i>Petroleum and Gas (Production and Safety) Act 2004</i> a compliance direction may be given by a departmental officer to remedy the contravention, where failure to comply with the direction may result in a maximum fine of 500 penalty units. In addition, the Minister can take additional action including: reducing the term or area of the authority, amend or impose a condition, cancel the authority or issue a maximum fine of 2000 penalty units.</p>
		71	Restricted land - Consent not required for entry on particular	We are deeply concerned with the proposal for restricted land to not apply to mining leases. Activity under a mining lease can be extremely intensive. The restricted land	Restricted land for a mining lease is resolved through the mining lease application-grant process under the <i>Mineral Resources Act 1989</i> (MRA) only when the Minister considers that the activities carried out on the restricted land, cannot coexist. In this

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			land to carry out prescribed activities for mining lease	provisions currently contained in the MRA are the only protection that the landholder has against the activities occurring in areas of high importance to their lifestyle and business operations – such as the homestead or watering points. By not requiring the resource authority holder to obtain the consent of the landholder to enter the restricted land under a mining lease, a landholder is now forced to agree and simply have the issue fall to compensation. This is, once again, a clear degradation of landholder rights and should be removed. The restricted land provisions currently contained in the MRA are modest and in the least should be retained and if anything expanded to a greater area.	<p>case a compensation agreement is required under the MRA for that land (clause 429). Clause 71 then provides an exclusion from the Chapter 3 restricted land access framework where a compensation agreement has been entered into.</p> <p>The changes in restricted land acknowledge the reality that there are clearly some situations where mining and other uses cannot coexist. With a development such as an open-cut mine for example, restricted land may not apply and the landholder would be compensated accordingly. To recognise this, the Bill includes a requirement that any disadvantage to the owner or occupier of the land be considered before a decision is made about such a mining lease application.</p>
		80	Land access - General liability to compensate	Shine Lawyers submit that the clause be amended to extend the resource authority holder's compensation liability to allow for situations where a landholder whose land is not located in the "authorised area" of the resource authority but which is affected by activity within the resource authority.	<p>This provision has been migrated across from the existing resources Acts and despite a minor change, it is intended to maintain the status quo that only owners or occupiers within the area of the resource authority may be compensated.</p> <p>Impacts such as dust, noise and odour, are regulated in the <i>Environmental Protection Act 1994</i>. The environmental authority for the resource authority will impose conditions to minimise and mitigate the impacts of environmental impacts.</p> <p>The general liability to compensate supports the land access framework. The land access framework applies where a resource authority holder requires access to land to undertake authorised activities or to access an authorised area. The resource authority area defines where the land access framework will apply.</p>
		39, 40, 43, 44, 54, 62, 65, 81	The use of regulations	<p>Concern about the use of regulations proposed by the Bill. Some of these regulation-making powers do not currently exist in the existing land access framework.</p> <p>The items proposed to be subject to regulations should be in the Act so that there can be adequate public debate.</p>	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.
		83	Land access - Negotiations	We note that sub-section (3) provides that the negotiations under clause 83 will end if the parties enter into an opt-out agreement. However, we again note that the provision of a NIN is not, under the Bill, a condition precedent to the entering into of an opt-out agreement. In our view, a NIN must be provided where the resource authority holder has a compensation liability.	The department notes Shine Lawyers suggestion regarding notice of intention to negotiate being utilised for opt-out agreements. However the proposed legislative amendments in respect to opt-out agreements are designed to be as simple and flexible as possible, without unnecessarily introducing uncertainty and complexity. Requiring a notice of intent to negotiate as a condition precedent to entering an opt-out agreement would be inconsistent with this approach.
		90	Land access - Particular agreements to be recorded on titles	Deferral agreements are noted as not binding upon title, but there are circumstances in which agreements to bind transferee's are made and suggest they should therefore be recorded upon title.	<p>The purpose of clause 90 requiring certain agreements to be noted upon title is to ensure that prospective purchasers are well aware of relevant agreements that have been reached between the owner and a resource company, thus allowing them to make an informed decision when contemplating a purchase; something that is not currently available.</p> <p>Deferral agreements are not statutorily binding upon successors and assigns. If a prospective purchaser agrees to enter into a tripartite deed with the landholder and the resource authority holder, that is a private matter for the parties themselves. A prospective purchaser however will not be bound by a deferral agreement they had no knowledge of, or refused to enter. The department therefore considers that noting upon title is an unnecessary burden with no benefit for stakeholders.</p>
15	Shine Lawyers			Suggest access agreements should also be noted upon title due to their binding effect on successors and assigns.	Access agreements are binding upon successors and assigns (clause 79), but as the agreements detail the access of land for the purposes of reaching authorised areas, can involve extremely short periods of time, and do not involve the carrying out of resource activities, requiring notation on title is unnecessary.
				Suggest that when an agreement is removed from the register, it should be a requirement to provide notice to the other party of the agreement.	The department notes Shine Lawyers proposal to require a notice to be provided to the other party to the agreement when requesting the removal of a notation. However it is considered that this would add an unnecessary, additional burden upon parties for no benefit. Removing the notation from title has no effect on the legal nature of the agreement itself; if a party mistakenly removes the notation, this has no impact upon compensation or access. A resource authority holder which mistakenly removes a notice would be in breach of the authority's conditions, and

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					upon discovery, would be required to remedy the situation.
		93	Land access - Compensation not affected by change in administration or of resource authority holder	Deferral agreements and opt-out agreements are not listed as binding. Suggest making these agreements binding upon the resource authority holder, but allow a transferee the ability to continue with an existing agreement.	<p>Clause 93 specifies that conduct and compensation agreements, road compensation agreements, or specified decision of the Land Court are binding upon successors and assigns. This provision has been migrated from the existing resource Acts.</p> <p>Deferral agreements are not currently statutorily binding under the resource Acts, and the Bill has been drafted to maintain the status quo.</p> <p>The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.</p>
		99	Land access - Review of compensation by Land Court	Suggest that a review of compensation liability by the Land Court should be extended to opt-out agreements.	Opt-out agreements are designed to minimise regulatory burden on parties with long standing, positive relationships. Landholders will be informed in prescribed materials that the Land Court will not be able to examine compensation liability under clause 99, and that if they are concerned about the potential for a dispute to arise when compensation liability has been provided for in the agreement, to provide for ADR processes within the opt-out agreement, or request the negotiation of a CCA instead.
				The drafting at sub-section 6(a) appears to be incorrectly worded. It states that the Court must consider "all criteria prescribed by regulation applying for the compensation". We suggest that, perhaps, this should read as "applying for to the compensation", however, as the regulations have not been released we are unsure what the criteria contained in the regulations refers to. Nonetheless, the wording of the phrase is confusing and requires clarification.	Criteria in respect to the compensation agreement will apply 'for' the benefit of initially assessing and determining compensation, and not 'to' determined compensation. The department therefore considers that suggested amendments to clause 99(6)(a) are not required.
		217	Restricted land - Application of new restricted land entry provisions	<p>This clause effectively renders the restricted land provisions contained in Chapter 3, Part 4 of the Bill useless as a significant amount of tenure has already been granted or at least applied for, particularly so for tenure under the P&G Act.</p> <p>We therefore suggest that the clause be amended to apply to all resource authorities granted under the P&G Act, regardless of the date that they were granted.</p>	Many agreements have already been made or negotiations commenced based on the existing legislative framework. The application of the proposed restricted land framework to existing granted, or applications for, resource authorities would have a significant impact on all stakeholders. Particularly if a resource Activity has already begun and it has to stop until consent can be gained, or the activity is already subject to a restricted land framework and differences need to be resolved.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		Chapter 9, part 3, division 4	Notification and objections - <i>Amendment of Environmental Protection Act 1994</i>	<p>Shine Lawyers state that it is claimed that the standard conditions for environmental authorities have been developed through a consultation process and that they do not believe this to be the case.</p> <p>A right to make submissions and consequently object to the conditions of an environmental authority should not be removed and thus placed behind the interest of a private enterprise extracting a State held resource.</p> <p>Mines, by their very nature, frequently have significant impacts on communities and individuals, whether that be from an environmental, social, community, economic or other perspective, and any individual or member of the community should be able to know what mines are proposed and have a right to have a say about the conditions that govern them.</p>	<p>Eligibility criteria and standard conditions must be developed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process was introduced into the legislation in 2012 and commenced in March 2013. An example of this process is the recent development of the eligibility criteria and standard conditions for petroleum activities (including CSG exploration). The eligibility criteria and standard conditions for these activities were developed in consultation with key stakeholders. Draft eligibility criteria and standard conditions were made available for public consultation through the Department of Environment and Heritage Protection's website. The consultation process was held from 28 February to 22 April 2013 and a report was published which outlines the key issues raised during consultation and the resultant actions or responses from the department. This report is available online at http://www.ehp.qld.gov.au/management/non-mining/documents/eligibility-criteria-standard-conditions-consultation-report.pdf</p> <p>The existing transitional eligibility criteria for mining activities are located in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These eligibility criteria and the standard conditions must be reviewed by March 2016 due to a sunset provision in the transitional arrangements for the legislation which commenced in March 2013. Therefore, the eligibility criteria and standard conditions will be developed through a public consultation process and individuals and members of the community will have a right to have a say about the conditions that govern these small, low risk mines during that process.</p> <p>The change to the <i>Environmental Protection Act 1994</i> to remove public notification requirements for 'low risk' mines (i.e. those that comply with the eligibility criteria) reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					people some distance from a proposed mine, such as coal mines, will always be publicly notified.
		262 and 263	Notification and objections - Public notification	Shine Lawyers submit that there has been an error in failing to remove the reference to "other than a mining activity" in section 232(2) of the <i>Environmental Protection Act 1994</i> .	The department will seek to rectify this drafting error.
		398 and 420	Notification and objections – Affected persons	We note that this clause inserts a new section 64A into the MRA which obligates an applicant for a mining claim to provide documents and information to each "affected person". However, the definition of "affected person" does not include an occupier of the land the subject of the proposed mining claim or an occupier of land necessary for access to the mining claim. In our view, an occupier of the aforementioned land has just as much right to be aware of the proposed mining claim area as the owner of that land. We therefore submit that the occupier of those lands should be added to the definition of "affected person".	New section 64A maintains the status quo in its definition of affected person. Mining claims are generally small in comparison to mining leases where the Bill proposes to extend notification requirements to occupiers. Holders of mining leases are generally likely to have the capacity to meet this requirement where it may place unnecessary burden on small business where this is currently not required.
		418	Notification and objections – Public notification	<p>We note that the proposed section 252A appears to be the new version of section 252B under the MRA, however, there are crucial differences between the two sections which are objectionable.</p> <p>Notably, the obligation to publish the certificate of public notice in an approved newspaper which circulates in the area has been removed. We again stress that mines by their very nature have a fundamental impact on communities, yet, under this proposal, they will not be notified of the imminence of that impact and nor will they be able to raise an objection to it.</p> <p>It is crucial that public notification of a proposed mining lease occur during the application process and we therefore submit that the public notification requirements of section 252B remain as they currently are.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		423 and 424	Notification and objections – Land Court considerations	<p>The proposed amendments to section 269 of the MRA significantly reduce the matters which the Land Court shall consider when making a recommendation to the Minister that an application for a mining lease be granted in whole or in part. However, in doing so, the amendments also limit the grounds upon which an affected person may object to the mining lease.</p> <p>We note the following as some of the fundamental matters which are proposed to be removed from section 269 of the MRA:</p> <ul style="list-style-type: none"> (b) the area of land applied for is mineralised or the other purposes for which the lease is sought are appropriate; (e) the term sought is appropriate; (f) the applicant has the necessary financial and technical 	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>capabilities to carry on mining operations under the proposed mining lease;</p> <p>(g) the past performance of the applicant has been satisfactory;</p> <p>(j) there will be any adverse environmental impact caused by those operations and, if so, the extent thereof;</p> <p>(k) the public right and interest will be prejudiced;</p> <p>(l) any good reason has been shown for a refusal to grant the mining lease.</p> <p>The above matters are fundamental and essential grounds of objection. Without these the grounds upon which an affected person may object to are severely limited. We therefore submit that the current section 269 of the MRA should remain "as is".</p> <p>We note that it is proposed to require the minister to consider some but not all of the above matters. However, it seems some essential things will no longer be considered at all including:</p> <ul style="list-style-type: none"> • If there will be any adverse environmental impact caused by the mine and if so the extent thereof; and • Any good reason has been shown for a refusal to grant the mining lease. <p>We understand that environmental impacts will be considered under the EPA provisions but that is with respect to the granting of an environmental authority not the mining lease.</p> <p>We do not think it is appropriate to delegate the abovementioned powers to the minister. To do so has the very real potential to allow industry to unduly influence outcomes and compromise ministers. It will in the least cause an appearance of lack of impartiality particularly when</p>	<p>to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				so many objection rights are being taken away.	
		429	Restricted land	<p>We note that it is apparently unjust and unfair to grant a mining lease over all restricted land without the consent of the landholder and to do so abrogates from a landholder's current statutory rights. The activities can have extensive impacts and should not simply fall to an issue of compensation alone. If the amendments are made a landholder will not only be left powerless during negotiations but will also be left with little amenity, privacy or rights to object. We therefore submit that the amendments be excluded from the Bill.</p>	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		567	Legacy boreholes	<p>As currently worded clause 294B has implications well beyond providing a means for addressing what risks may be posed by legacy boreholes (which on the evidence to date would appear to be remote).</p> <p><u>294B(1): "remediate"</u></p> <p>We take "remediate" to mean plug and abandon. We submit that it is necessary to be aware of the scale and scope of what is required to plug and abandon a bore or well in order appreciate the imposition involved.</p> <p>"Remediation" involves a significant intrusion and potentially a substantial interference in the farming operations of the landholder.</p> <p>We do accept that some legacy boreholes may present a health and safety risk but we submit that the discretion to authorise a third party to enter private land to "remediate" a bore or well on that land without the consent of the owner</p>	<p>The department thanks Shine Lawyers for their submission.</p> <p>The construction of proposed section 294B is broad to ensure the State is able to authorise action to remediate a bore that presents a safety concern in a range of circumstances and scenarios that are too numerous and sometimes difficult to prescribe in legislation.</p> <p>The intention as set out in the Explanatory notes is to enable the State to authorise parties to remediate legacy boreholes when they present a safety concern. The department agrees with Shine Lawyers that the risk of such incidents as the Kogan event occurring regularly is very low. Where they have occurred on mine sites, they have been readily dealt with.</p> <p>The situation at Kogan was resolved quickly by a collaborative response from industry and government, and without the specific legislation proposed in the Bill. However, the incident occurred on State owned land and discussions following the incident identified constraints for using the same approach in other circumstances and scenarios. In particular, industry identified matters that would require change before committing to any ongoing involvement in remediation of legacy boreholes. The matters of concern related to access if the incident was on private land or on</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>(i.e. destroy a substantial privately owned asset) represents a substantial intrusion upon/retrenchment of private property rights which should be countenanced only in circumstances where it is reasonably justifiable, where no other recourse is reasonably available and even then only if constrained with appropriate protections for the property rights of landholders including access to just compensation for damage or losses incurred.</p> <p><u>294B Subclause (a): "poses a risk to life or property"</u></p> <p>We submit that subclause (a), as currently worded, too lightly dispenses with/offers inadequate protection of private property rights to an unjustifiable degree.</p> <p>We strongly recommend that the test under subclause (a) be made more robust by expressly imposing a standard of reasonableness on the decision making of the Chief Executive and raising the threshold so as to only apply in circumstances of "real and immediate risk" to life or property (Judicial opinion indicates that the test for "real and immediate risk" is a risk which exists, is identifiable, is more than remote or fanciful and which is present and continuing).</p> <p>In light of the above we submit that subclause (a) should be reworded as follows:</p> <p>"(a) a bore or well the chief executive believes, on reasonable grounds, poses a real and immediate risk to life or property;"</p> <p><u>294B Subclause (b): "legacy borehole"</u></p> <p>Firstly, we note that there is conflict between the Explanatory Notes and the actual practical effect of clause 294B. The Explanatory Notes state on page 12 that "legacy boreholes are boreholes or wells drilled for the purpose of coal, mineral, petroleum or gas exploration or production but not by the current tenement holders or their related bodies corporate". However, clause 294B is not strictly limited to "legacy boreholes", rather, it applies also to "a bore or well" - i.e. a water bore used by a Landholder to water a property. The</p>	<p>land that another party had tenure for, indemnity against liability and remediation costs.</p> <p>Another matter identified in developing the legislation related to the inability to ascertain the origin and type of borehole particularly if an urgent response was required, e.g. if the borehole was on fire it would not necessarily be possible to determine whether the bore had been drilled for resources exploration or water. Additional amendments that will allow the holders of tenure to remediate legacy boreholes as an authorised activity of the tenure require the holder to reasonably believe the bore was the result of previous resources operations. The application of existing access, notification and environmental regulation will enable the tenure holder to ascertain the type and origin of the bore.</p> <p>In the event of a fire or other safety concern requiring immediate action, the department was advised that it may not be possible to determine the type or origin or history of the bore prior to remediation action was taken. There are other scenarios that also contributed to the broad construction of section 294B including: not knowing whether the borehole was an old water bore; historically some coal exploration bores have been "given" to landholders for conversion to a water bore, some may not have been converted, some may have been converted but are now not in use but not decommissioned, and the relevant history of the bore may be unknown to the current landholder. Under the proposed construction if urgent action is needed, because of a fire or other emergency, State authorisation can be granted where these matters are not able to be determined.</p> <p>The suggested process for remediation of legacy boreholes set out in the submission presents a specific scenario. In practice the situation will depend on the type and condition of the bore. For example, many boreholes drilled under resources acts and not transferred to the landholder will not have windmills or associated structures, they present as a hole in the ground.</p> <p>The type and condition of the bore to be remediated has been considered in the proposed standards for remediation. In line with the MERCPC Bill amendments, the resource Act regulations are to be amended to apply schedule 3 of the <i>Petroleum and Gas (Production and Safety) Regulation 2004</i> as the standard for remediation. Schedule 3 is the minimum standard for plugging and abandoning all new and current coal, petroleum and gas boreholes, wells and associated facilities. The regulation amendments will allow the application of schedule 3 to be "as far as practicable". This enables a risk assessment approach to how each legacy bore is remediated. This necessary given the range of circumstances leading to legacy bores, the type of bore, whether there has been previous effort to plug and</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>clause provides for no rights to compensation or notification, yet it effectively enables a person to enter my land and plug a bore that is being used simply because it is emitting gas above the lower flammability limit – which is a comparatively low threshold. There are numerous bores within Queensland that emit varying levels of gas and are relied upon by landholders every day of the week. The proposal contemplated by the clause is therefore simply absurd and requires re-drafting to give effect to the intent of the proposal as explained at page 12 of the Explanatory Notes.</p> <p><u>294B Subclause (b): “legacy borehole”</u></p> <p>The DNRM has indicated that a significant number of landholders have applied to have former petroleum bores on their properties transferred to private ownership for conversion to water bores as a consequence of the drought earlier this year.</p> <p>We are aware of former petroleum bores that have been successfully converted for use as water bores and it is not uncommon for landholders to regard former petroleum bores as reserve water bores which they can look to configure in times of drought if need be.</p> <p>If these bores do not present a real and immediate risk to life or property (and we expect that most do not) then we submit that, at a minimum, the relevant landholders should be invited and given a reasonable opportunity to take a transfer of any such bores for conversion to use as water bores.</p> <p>In these circumstances we submit that the most transparent and appropriate course to address legacy boreholes would be to require resources authority holders to reach a negotiated settlement with landholders to plug and abandon such bores and compensate for harms. We submit that this could be achieved by making clear in clause 294B that any remediation authorised under that clause is an ‘advanced activity’ for the purposes of the P&G Act. This would not impede any remediation required to address emergencies because of the effect of section 500A(f) of the Act and would</p>	<p>abandon or whether the borehole has been left as an orphan. Advice from industry during consultation emphasised that some legacy bores will have been rehabilitated to the standard of the day rather than being abandoned/orphaned bores.</p> <p>The extensive remediation steps outlined in the submission are unlikely to be applied in every situation. In the Kogan incident, the following process was used. After confirmation of a fire at the surface of the borehole, industry and government representatives developed a plan of action, and the department notified adjoining neighbours about the proposed action. Preparatory work to provide access and prepare the site was undertaken prior to the extinguishment of the fire. Another company then attended with a service rig to ream the bore, and cementing and capping the bore in line with abandonment practice. Action to remediate was completed within four days. This followed four days in which the fire was identified, confirmation that the fire involved a borehole, development of a joint government industry plan and notification of neighbours.</p> <p>It is important to note that the construction of the section does not require State action in the range of events presented in the submission, e.g. where gas emissions may be above the LFL but are not a safety concern. There is discretion for the State to determine whether or not an authorisation under section 294B is issued. This is extremely important as it allows a process that can respond to a range of circumstances and landholder perspectives, e.g. - the State can choose not to take on the liability and responsibility for remediation action where a landholder did not want a bore remediated even though it technically met the definition of safety concern provided by the three limbs of section 294B; at the same time the State can at the request of a landholder authorise a person to take immediate action to remediate a bore or well that is on fire or where gas levels present a risk to their life or property. The legislation is drafted to enable action to be taken where there are safety issues presented by legacy boreholes. There is no Government policy to plug and abandon all legacy boreholes.</p> <p>The Government’s priority to develop the amendments was to ensure there was a process in place to resolve any future incidents like that at Kogan wherever they occur. The State’s activation of the section 294B authorisation will depend on advice from landholders and tenure holders about issues of safety. As noted in the submission the process for proper plugging and abandonment is extensive with appreciable costs.</p> <p>Therefore, it is intended that the authorisation process be limited to where the department has assessed there is a safety concern requiring action. The</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>enable landholders to be compensated for the harms which remediation may entail.</p> <p>294 Subclause (c):</p> <p>“bore or well on fire”:</p> <p>We submit that a bore or well on fire would already be captured by subclause (a). For that reason we submit that the “fire” limb of subclause (c) would be redundant.</p> <p>“emitting gas causing a gas concentration in the surrounding air greater than the lower flammability limit”:</p> <p>It is possible that subclause (c), as currently worded, would capture a very large number (possibly even the majority) of existing water bores in western Queensland and if the discretion under subclause (c) were to be actioned even handedly across the board, a substantial number of landholders in western Queensland would potentially be deprived of access to the only source of ground water available in those areas.</p> <p>We submit that the thrust of subclause (c), which we take to be aimed at protecting life and property, would also be adequately addressed by subclause (a).</p> <p>For the reasons above we submit that 294B subclause (c) should be deleted from the Bill.</p>	<p>assessment process will be done in consultation with the landholder where there is no threat to life or property.</p> <p>The department acknowledges there are a variety of scenarios that would be caught by the construction of section 294B. This reinforces the need for a risk assessment process in determining whether an authorisation is granted. The Petroleum and Gas Inspectorate are equipped to make assessment of risk. In any case, the Inspectorate does not condone the lighting of bores.</p>
		567	Legacy boreholes	<p><u>Make good</u></p> <p>Under Chapter 3 of the <i>Water Act 2000</i> (the Water Act), landholders whose bores are impacted by CSG activities have an entitlement to have the relevant CSG tenement holder provide a make good agreement providing for make good measures in respect of the impairment of the bore(s).</p> <p>We are greatly concerned that clause 294B as currently drafted has the potential to be used as a means to deprive landholders of what is sometimes the only means of leverage to obtain a fair make good offer from resource authority</p>	<p>The introduction of section 294B is to authorise action to remediate a legacy borehole that presents a safety concern. It is not related to separate discussions between a landholder and a tenure holder about make good agreements related to coal seam gas impacts on groundwater. The department considers that these amendments do not alter or impair the ability of either party in the discussion of make good agreements. Similarly, the amendments do not alter or impair another landholder initiative to convert old petroleum and gas wells to water bores. It is also noted that routine remediation of legacy boreholes by tenure holders as an authorised activity connected to their tenure is subject to existing regulatory requirements for access, notification including conduct and compensation agreements as well as relevant environmental requirements.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>holders for impaired water bores.</p> <p>For that reason we submit that landholders should have a power to veto access for plugging bores or wells on their land that do not pose a real and immediate risk to life or property.</p>	
		567	Legacy boreholes	<p><u>Just compensation for damage or losses incurred</u></p> <p>Under clause 294E of the Bill, a person authorised under clause 294B to remediate a bore who enters the relevant land “must not cause or contribute to unnecessary damage to any structure or works on the land” and “must take all reasonable steps to ensure the person causes as little inconvenience and does as little other damage as is practicable in the circumstances”.</p> <p>Further, a person authorised under clause 294B is added to the list of persons under section 856(1) of the P&G Act absolved from civil liability for “acts done, or omissions made, honestly and without negligence under this Act” (the list currently refers to persons tasked with directions under or required to administer the Act).</p> <p>Necessary damage to structures or works and a degree of interference and collateral damage appear to be permitted and clause 294 is silent as to compensation for these. We submit that the scope of the types of harms that would be permitted under 294E is not adequately constrained by the existing wording.</p> <p>We expect that in most, if not all cases, the persons who will ultimately be authorised under the Act to ‘remediate’ will be the relevant CSG tenement holders or their associates.</p> <p>In light of these circumstances we submit that it would be unjust to absolve the resources authority holders from having to provide just and full compensation in respect of the harms they may cause if they seek to ‘remediate’ bores or wells on private land.</p>	<p>Based on <i>Mineral Resources Act 1989</i> provisions to facilitate access for rehabilitation of abandoned mines, the amendments include requirements for notice of entry. If the remediation action is necessary to preserve life or property, notification is within 10 days after the entry is made, otherwise notification is required before entering the land. In situations where it is agreed the safety risk is minimal, an authorisation may not be issued with the landholder opting to manage the risk.</p> <p>There is also a requirement for the people authorised under section 294B to not cause, or contribute to unnecessary damage to any structure or works on the land and must take all reasonable steps to ensure as little inconvenience and do as little damage as is practicable in the circumstances. While similar to the abandoned mine provisions, compensation is not provided for in the legislation, it is not precluded, allowing for negotiation on a case by case basis. The State in authorising a person under section 294B takes on liability and responsibility for the remediation activities.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				We submit that clause 294 should make provision for affected landholders to be entitled to just and full compensation for all such damages and losses (including any legal, accounting, valuation and other reasonably necessary expert costs) and that the appropriate mechanism for addressing compensation would be to require resource authority holders to reach a negotiated settlement with landholders to plug and abandon such bores and compensate for harms.	
16	Wildlife Preservation Society of Queensland Logan	Refer to Table 3			
17	Queensland Conservation	Refer to Table 3			
18	Mr Graham Slaughter	418 and 420	Notification and objections – Affected persons	<p>Removal of the right to notification of mining lease applications to directly impacted landholders, occupiers, infrastructure providers and local governments will take away the right of neighbours and members of the public to raise concerns about mining operations that, whilst they occur on private property, will nevertheless impact on them through the movement of machinery on public roads as well as issues of noise, dust and extended environmental damage beyond the property on which the operation is based</p> <p>It would seem to be extremely difficult to consider any mining operation to be minor when it cannot fail to impact on persons and properties wider than the property on which the mining operation will take place.</p> <p>Individual property owners often feel powerless to negotiate with mining companies and often lack the knowledge and financial resources to adequately investigate and understand what is being proposed.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				Most agreements also include confidentiality clauses which prevent landholders speaking with their neighbours, and prevent public scrutiny.	<p>beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
19	Donnie Harris Law	68	Restricted land - Definition/ application	Removing stockyards, bores, dams and other key infrastructure from restricted land may result in substantial and disastrous impact on their livelihoods.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
		Chapter 3, part 2	Land access - Legal Fees	Donnie Harris Law note that they are encountering disputes about whether resource companies are required to reimburse legal fees incurred by a landholder when negotiating a CCA, when the resource company pulls out of negotiations due to the project not proceeding. Suggest a	The department thanks Donnie Harris Law for its submission. The Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				clarification of the law that the requirement to compensate arises from the giving of the notice of intent to negotiate.	legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation, in addition to the consolidation of land access provisions.
		80	Restricted land - Compensation regime for land that was previously restricted land	It is not adequate to say that land no longer subject to restricted land can be dealt with under the conduct and compensation regime as it does not account for the fact that a landholder is an unwilling vendor and would not choose to be compensated at land values in a depressed market.	<p>Clause 80(4) provides a list of categories of effect that compensation may be claimed against. This provision has been migrated across from the existing resource Acts and maintains the status quo.</p> <p>The Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation.</p>
		245	Notification and objections	<p>The Bill would remove established statute law rights for some individuals as it would remove the requirement for mining lease and environmental authority applications to be publicly notified. The public should have the right to be informed of the proposed use of these resources and their location. The present process ensures transparency and accountability.</p> <p>There are other ways of streamlining the application and grant process and ensuring that only material objections to the applications are dealt with without removing public notification. Such ways could include for example:</p> <ol style="list-style-type: none"> 1. Requiring public objectors to provide security for costs; 2. Implementing a fee for the lodgement of a public objection. <p>This alone would weed out who is seriously opposed to the grant of an application from those who are simply lodging</p>	<p>These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				objections in the hope of causing delay and inconvenience.	scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.
		287(2), 315(3), 355, 489(3) and 552(3)	Removal of 600 metre rule	Allowing resource companies to conduct low impact activities with close proximity of a residence is denying individuals of their fundamental right to privacy and amenity. This is a breach of the <i>Legislative Standards Act 1992</i> as the legislation does not have sufficient regard to the rights and liberties of individuals and is removing key rights.	<p>Currently a conduct and compensation agreement (CCA) is required for any activity (including preliminary-low impact) within 600 metres of a school or occupied residence (600 metre rule). Preliminary activities involve walking, driving along an existing road or track, taking soil or water samples, geophysical surveys not needing site preparation, some types of minimal impact surveys and survey pegging. Anything else is an advanced activity which includes drilling, clearing, road construction and seismic surveying using explosives. Any advanced activity requires a CCA.</p> <p>While the actual restricted land distance is proposed to be prescribed by regulation, consultation on a proposed distance of 200 metres for exploration and production authorities was undertaken. If this was adopted, it would mean that a CCA for preliminary activities would no longer be required between 600 and 200 metres. Within 200 metres, owners and occupiers would have the right to give consent and any conditions, and in addition a CCA would be required for any advanced activities.</p> <p>Therefore, while a landholder will not have the right to a CCA for preliminary activities between 600 and 200 metres, this is replaced with a much higher level of protection with restricted land applying within 200 metres. The CCA framework and 600 metre rule never gave landholders a right to withhold consent for low impact activities. They will now have this additional and more substantive right.</p>
21	Mr Andrew Rea	68	Restricted land - Definition/application	<p>By removing stockyards, bores and other watering points from the definition of restricted land will significantly disadvantage landholder and impact on their livelihoods.</p> <p>The changes benefit the resource industry but do not preserve individual rights that have been in existence for many years.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>

					to provide the greatest net benefit of the options available. As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.
25	Mr Rick Kilpatrick	Bill as a whole	Consultation on the Bill	Before such sweeping changes are made wide public discussion should be allowed in a time frame more suitable to the length, complexity and grave implications of this new bill.	The department notes the views expressed by Mr Kilpatrick.
30	Mr Chris Dalton	3	MQRA Program	The objective of modernising and harmonising Queensland's resources legislation is laudable as it has the potential to lead to a reduction in costly bureaucratic and legislative overlaps, introduce efficiencies and facilitate substantial economic benefits to Queensland. However, while the Bill considers the interests of landholders, it does not consider the interests of the land itself.	The department thanks Mr Dalton for his support for the proposed amendments. While the Bill itself does not expressly consider the interests of the land, the Bill has been drafted to work as part of the existing resources Acts, whose objectives include minimising land use conflicts and encouraging environmental responsibility and responsible land care management. Additionally, the resources Acts work in tandem with the <i>Environmental Protection Act 1994</i> , to ensure the appropriate environmental safeguards are in place to protect the environmental features of the land.
		418 and 420	Notification and objections – Affected persons	In limiting those who can object to the granting of a mining lease, there is no guarantee that the 'affected persons' who are allowed to object will comment on the interests of the land. This will lead to less well-informed decision-making with regard to mining lease applications, as environmental organisations such as Queensland Conservation are better resourced and informed than 'affected persons' on such matters and thus better placed to provide informed comment. If, by such legislative action, the Queensland Government sets in place a process that limits who can represent the interests of the land then, pursuant to honouring the object of the <i>Environmental Protection Act 1994</i> , it should itself address how the granting of a mining lease improves "total quality of life". Further to this, equity is raised as a relevant issue in the context of the interests of miners and landowners, but not with regard to the land's interests. There are accountability issues here that the Bill fails to address.	The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i> . These criteria provide a clear definition of when a mine can make a standard or variation application. Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i> . Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				In recognition of the need to address such accountability shortcomings, this Submission advocates that in the assessment of any application for a mining lease, the Queensland Land Court should include an analysis of how granting a mining lease will "improve the total quality of life", as provided for in the <i>Environmental Protection Act 1994</i> .	people some distance from a proposed mine, such as coal mines, will always be publicly notified. Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.
		Chapter 3	MQRA Program – Land access	There is not a nationally consistent land access framework to ensure regulatory consistency between the agricultural and energy sectors. It would be unfortunate if the Bill put in place measures that further exacerbate such problems. Mr Dalton suggests the Committee's report should include a list of the consultations the Queensland Government has had with the Federal Government on these provisions.	The concerns raised by Mr Dalton are beyond the scope of the amendments to the land access framework in the Bill. In many ways Queensland is the leader in terms of land access policy and legislation. A number of reviews have been conducted on the land access framework since its introduction in 2010, to ensure the efficacy of the framework in achieving its intended objectives. Recommendations of the Land Access Implementation Committee from the most recent independent process are being implemented through this Bill.
		N/A	MQRA Program	As stated in the Explanatory Notes, the current Queensland legislative framework for the resources sectors contains "some of the most complex and lengthy resources legislation in Australia" (p1). This reflects the dynamic growth and importance of the resources sector, and a desire to have in place appropriate regulation to address the environmental concerns that attend this dynamic growth. Regulatory reform is needed, however, even though resource industries such as Coal Seam Gas (CSG) are still in their infancy. As at 2012, just 0.1% of Australia's potential in-ground CSG reserves had been mined. With this huge growth potential and evolving Australian attitudes towards the way land is valued, reforming legislation is duty bound to anticipate such emerging issues to minimise the scope for future legislation becoming complex and onerous. Deferring questions about environmental issues to some later review of the <i>Environmental Protection Act 1994</i> would be inconsistent with the MQRA Program's aim of modernising and harmonising resources legislation.	The MQRA Program consolidation of the five resources Acts does not include matters provided under the <i>Environmental Protection Act 1994</i> .

34	Mr Ralph Prestage	Chapter 3, part 3	Land access – Private land	<p>Expressed concern regarding the Bill, and perceived continuing lack of protection for landholders and agricultural interests.</p> <p>Suggests no entry onto private land without prior agreement between landholder and the mining company, and that a mining company can enter land unannounced and commence drilling is seen as concerning.</p> <p>Suggests arbitration should be utilised where stalemates exist, and that landholders should be fully compensated.</p>	<p>The department notes Mr Prestage's general concerns regarding the Bill. The department however considers that the land access framework provides a balanced approach to the benefit of both industry and landholders.</p> <p>Entry onto land cannot occur without the giving of an entry notice to owners and occupiers as per clause 39. Additionally, advanced activities, which may incorporate drilling, cannot commence until a CCA, deferral agreement or opt-out agreement has been agreed with the landholder as per clause 43.</p> <p>Clause 86 provides that parties may seek a conference or elect an ADR process to resolve issues that are preventing the execution of a CCA. Clause 80 also specifies the resource authority holder's general liability to compensate, which covers items such as damage caused by authorised activities, deprivation of possession of its surface, diminution of value, and accounting, legal or valuation costs reasonably incurred whilst negotiating a CCA (other than the costs of a person facilitating an ADR).</p>
39	Ms Gail Hamilton	245	Notification and objections – Site-specific	<p>Even small mines may last for decades and have serious impacts on our finances, ecology, environment and society. Public objection rights are powerful rights to prevent social and environmental impact. Public objection rights to proposed mines are essential to enable the costs and benefits to be debated openly in Court and to deter the type of corruption seen in NSW.</p> <p>Very few, if any, community objections to proposed mines have been vexatious, most highlight significant concerns and can be a valuable aid to assessing officers.</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. 					has not been changed.
		423 and 424	Notification and objections – Land Court considerations	It is inappropriate to restrict matters that the Land Court can consider and give these powers, such as to consider the 'public interest', to the Minister. Decreasing judicial oversight, increasing ministerial powers and shutting out community participation has worrying implications for corruption .	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an</p>

					<p>environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
7 16 17 20 24 27 28 29 31 32 33 35 36 37 38 40 41 42	<p>The Wilderness Society (Qld)</p> <p>Wildlife Preservation Society of Queensland - Logan</p> <p>Queensland Conservation</p> <p>Ms Symone Male</p> <p>Mr Wayne Reid</p> <p>Ms Robina Cahill</p> <p>Shannon Krebs</p> <p>Mr Anthony Nelson</p> <p>Ms Lorraine Parkin</p> <p>Ms Sonay Duus</p> <p>Mr Mitchell Bright</p> <p>Ms Caroline Rentel</p>	418 and 420	Notification and objections – Affected persons	<p>These clauses remove existing community notification rights and rights to object to mining lease applications. Changing land tenure to allow for mining rather than another land use could impact on a broad section of the public. Therefore the narrow definition of an ‘affected person’ proposed, which would exclude neighbours or community groups or people in the water catchment, is absurd. Land use decision making processes for other industries provide for community submission and appeal rights, so there is no good reason why mining tenure should be exempt from this basic standard.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an</p>

		245	Notification and objections – Site-specific	<p>Limiting community notification and formal objection rights to the Land Court to “site specific” environmental authorities will, in conjunction with the above clauses, remove all existing public rights to lodge formal objections to the Land Court in up to 90% of mining projects in Queensland. This is unacceptable and fails to recognise the positive impact of community objection rights.</p> <p>Suggestions by State government Ministers that objectors lodge frivolous or vexatious cases is entirely untrue, rather the opposite is true: there are no examples of such cases and objectors are very responsible. In the Alpha coal case (2014) the land holders and conservation group exposed that the mining company had a lack of hard data on groundwater impacts. Public spirited objectors went to Court and saved Ellison Reef (1967) from limestone mining and helped show the importance of protecting Fraser Island, now World Heritage Listed (1971).</p>	<p>These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for the activity), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights on a case-by-case basis. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>For example, the Alpha coal case (which is specifically mentioned in the submission) was a site-specific application for an environmental authority which had also had an Environmental Impact Statement prepared and published for comment under the <i>State Development and Public Works Organisation Act 1971</i>.</p> <p>A site-specific application would also be required for any mining application in an area like Ellison Reef or Fraser Island, due to their location and the operation of</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					eligibility criteria which requires a site-based assessment for activities within or near 'category A environmentally sensitive areas'.
		423 and 424	Notification and objections – Land Court considerations	It is inappropriate to restrict matters that the Land Court can consider and give these powers, such as to consider the 'public interest', to the Minister. Decreasing judicial oversight, increasing ministerial powers and shutting out community participation has worrying implications for corruption.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act</i></p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>1994 in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
		429	Restricted land	Removal of restricted land status when the miner is granted exclusive surface rights to access land removes one of the few rights of vulnerable landholders. No-one should have the land surrounding their house destroyed by an open-cut mine yet this would be possible under this clause.	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		N/A	Notification and objections	I call on the Committee to please ask Minister Cripps to provide exact figures on how many of the 176 submitters to the discussion paper opposed changes to existing objection rights and detailed examples of alleged cases of vexatious objections. According to EDO Qld, at least 106 submissions of a total of 176 submissions on the discussion paper, from both rural and urban submitters, opposed the changes. Yet Minister Cripps does not report this key fact in p47-48 of the explanatory notes.	<p>The department advises that 176 submissions to the discussion paper titled 'Mining lease notification and objection initiative' were received from individuals (98), community groups (13), landholders or landholder representatives (20), environmental groups (26), miners (6), peak industry bodies (2), the Local Government Association of Queensland, Indigenous representative bodies (2), law firms (2), Queensland Law Society, infrastructure providers (2), the Construction, Forestry, Mining and Energy Union (CFMEU) and the Queensland Tourism Industry Council. One submission was signed by 44 individuals.</p> <p>The department has recently published the Decision Regulatory Impact Statement (RIS) for Notification and Objections on the Department's website. It will also be posted on the Department of Environment and Heritage Protection's website as well as the Office of Best Practice Regulation's website. The department will also</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>be taking steps to advise each submitter of its release.</p> <p>A broad summary of submissions is provided in Section 7 of the Decision RIS dealing with the results of consultation and a more detailed summary of individual submissions is included in Appendix 4 Table 1 of that document.</p>
44	Ms Gemma Schuch	418 and 420	Notification and objections – Affected persons	<p>It is not right that neighbours might not be able to object to the decision to grant mining lease tenure, unless their land is needed for access. Groundwater, surface water, infrastructure and economic change greatly affect people whose land is not directly and obviously affected by a mining development. Also, freedom to information is also essential in any democratic society. People should be publicly notified of all mining developments, not just those deemed 'high risk'.</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>
48	Ms Janine Wright	418 and 420	Notification and objections	<p>I believe strongly that communities should have a say in what mining activities are undertaken in them. I also believe that children who live near proposed mines, and adults for that matter, should be protected from any adverse health effects, if these are found to exist. To that end there needs to be careful examination of any mining applications to make sure the health and safety of the communities are considered.</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. 58	Russell, Lyn and Doug Bennie	Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy boreholes	There is no adequate description as to what constitutes a legacy bore - is it an old exploration bore placed and irresponsibly left by the mining industry, or a old or current use water bore used by farmers?	<p>The definition of legacy borehole is included in amendments to each of the resources Acts, see clauses 298, 326, 385, 502 and 569. As noted in the corresponding explanatory notes for these clauses, the intention is to capture boreholes or wells drilled for the purpose of resources exploration or production, or to inform resources exploration, but not drilled by the current tenement holders or their related bodies corporate, (i.e. the land has been relinquished or there is no continuity of tenure to the current holder). The inclusion of the provision for holders to “reasonably believe” is to enable action where it is not possible to prove the type and ownership of a particular borehole. It is also important to note that the definition in the above clauses includes a provision that it is a well or bore that is no longer used for the original or another purpose. This means that where a bore is being used for water it would not meet the definition of legacy borehole.</p> <p>The proposal for the State to authorise remediation action where there is a safety concern with a bore does extend to water bores ONLY where there is a risk to life or property, or if it is on fire or emitting gas causing a gas concentration in the surrounding air greater than the lower flammability limit.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6	Legacy boreholes	The ability for an organisation to access and impact our land and business at their will and desire under any pretence is simply not right. This will not be tolerated - particularly as assurances were given by the CSG industry that this migration of escaped gas was not going to occur and are not detailed as a impact to the environment in any Environmental Impact Statements (EIS).	Companies holding tenure may remediate legacy boreholes subject to existing regulatory requirements for conduct and compensation, notification and environmental matters. No company can take emergency action to remediate bores presenting safety concerns without prior authorisation by the State. It is also noted that migration of gas has occurred in the past, regardless of CSG activity.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		part 7 – division 7 part 9 – division 6 part 10 – division 7			
		Chapter 3, part 2	Land access – Opt out	It is easily apparent that CSG companies will offer the "opt out option" as another way to deceive and confuse landholders who lack the same working knowledge as the aggressive representatives that represent CSG companies.	The department is committed to implementing the Land Access Implementation Committee (LAIC) recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement. All landholders can refuse to engage in signing an opt-out agreement, and ask for the commencement of negotiations for a conduct and compensation agreement if beneficial for their particular circumstances.
		Chapter 3, part 2	Land access – Negotiation of agreement	The fault of failure to negotiate an agreement with a landholder lies with the CSG companies. Forced mediation and threat of Land Court proceedings serves only as a threat to landholders as there are concerns about contamination of drinking water supplies and environmental impacts.	<p>The granting of a resource authority confers a right to develop a resource held by the State. This requires a mechanism for the resource authority holder to gain access to land to exercise this right. The land access chapter proposed in this Bill in most respects reflects the existing framework currently in place and seeks to get the balance right between the interests of landholders and the resources sector. The mediation and independent review by the Land Court is only intended to provide an avenue for disputes to be resolved.</p> <p>Importantly for landholders, this Bill introduces the restricted land framework. For the first time, landholders affected by future applications by the petroleum and gas sector will gain the right to withhold consent to the majority of resource activities within close proximity to their homes and some business premises. The restricted land framework also applies to neighbouring buildings outside the boundary of the resource authority where the existing conduct and compensation agreement (CCA) framework does not.</p> <p>In addition, the Bill implements recommendations from a recent independent review of the land access framework that resulted from an extensive period of consultation. This originated with the report of the Land Access Review Panel released in July 2012, the subsequent <i>Queensland Government Response to the report of the Land Access Review Panel</i>, the <i>Six Point Action Plan</i>, and finally the <i>Land Access Implementation Committee Report</i>.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
59	Jindal Steel and Power (Australia) Pty Ltd	145	Overlapping tenure - Authorised activities allowed only if no adverse effects	<p>In theory this section is the one that gives us the most hope in so far as it should allow us to gain entry to the tenement so long as our activities have no "Adverse Effects" on the PL Holder. But what is the definition of "no adverse effects". It is such a subjective statement that as it stands no matter how much we believe that we will have no "adverse effects" we will have no recourse if the PL Holder believes there will be.</p> <p>As it stands the proposed law has no teeth and will be used by the PL Holder to brush aside any overlapping tenure holder by simply claiming that there could or will be adverse effects. For example the PL Holder can simply say that there is a chance that the overlapping tenure holder may damage "the good relations" which have been established with land owners. This is absolutely correct, it is a possibility, and it would be an adverse effect, but how can we prove that we wouldn't do this?</p> <p>This section needs more definition to detail how "no adverse effects" is to be interpreted and ruled upon.</p>	The department notes Jindal Steel and Power's concern regarding the definition of "no adverse effects". The department will work with industry to resolve the matter.
		147	Overlapping tenure – Exchange of information	<p>This section provides encouragement that overlapping tenure holders will be required by law to share information. Unfortunately however the list of nine different criteria of information ((a)- (i)) fails to include the most important information that either party would be most interested in, that is the results of exploration that has been completed to date.</p> <p>It is matter of interpretation as to whether exploration data comes under the fold of the first part of the section which states "The resource authority holders for an overlapping area must give each other all information reasonably necessary to allow them to optimize the development and use of the coal and coal seam gas resources".</p> <p>To remove all doubt, if this is the intent, the sharing of exploration data should be included as additional criteria (j) under the second part of the section.</p>	The department notes Jindal Steel and Power's concern regarding the criteria for information exchange under clause 147. The department will work with industry to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		147	Overlapping tenure – Exchange of information	<p>The section is vague as to whether there should be any costs paid for the information exchange. In the absence of any definition one can only presume that information is to be passed on free of charges. This is probably unreasonable especially if the information transfer is only happening in one direction .While I do not believe there should be a charge passed on for the cost of gathering raw data e.g. exploration data, I think it is reasonable to expect some compensation for the time it takes the personnel of the company that has the data to gather it and pass it on to the company that is requesting it, i.e. a nominal labour compensation charge.</p> <p>The issue of payment for data should be clarified with guidelines within the section. If the intent is for information exchange to be completely free of charge it should say so.</p>	<p>The department notes Jindal Steel and Power's concern regarding payment for information exchange under clause 147. The department will work with industry to resolve the matter.</p>
		221	Overlapping tenure – Exploration permit (coal) granted over existing PL	<p>I found this section very difficult to read but in the end I interpreted it to mean that there will be no retrospectivity with regard the enactment of the Bill to existing engagements that exist between EPC and PL Holders. In other words all the positives that may have been provided for in the Bill, with regard provisions for gaining access to explore and to share information, will not be enforceable in the specific case of our Roma EPC.</p> <p>If this is the case it will make a complete mockery of the entire Bill as the vast majority of conflicts that will ever exist between coal and coal seam gas producers exist right now not in the future. It will be a Bill that by its own wording debunks its own application, so why even bother with it?</p> <p>The enactment of the Common Provisions Bill needs to be made retrospective of all existing engagements between Coal and Petroleum Tenure Holders.</p>	<p>The department notes Jindal Steel and Power's concern that chapter 4 of the Bill does not provide a retrospective framework for all existing arrangements between Coal and CSG tenure holders. This approach in the Bill is consistent with the position in the White Paper.</p>
		232	Overlapping tenure – Extension of period until mining	<p>The Cart blanch provision of a nominal 16 year period in which proponents looking to develop coal assets in the Surat Basin will have to wait (after the issue of an ML) before any physical commencement of operation is allowed, is a</p>	<p>The department appreciates that the matter of transitional arrangements for the Surat Basin geographical area is a contentious issue for the resource industry. This is evident in the fact that the parties failed to reach an agreed position on the matter in the White Paper and turned to government to resolve this matter. In</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			commencement date	<p>ridiculous impost to make. How can such a generic number be implied across the entire industry which will effectively stifle mining development of the Surat.</p> <p>Every situation and overlapping tenure should be examined on a case by case basis. In many circumstances the coal seams that the coal proponents are interested in will be above the horizon that gas producers need. There is no reason why the two can't in many circumstance happily co-exist side by side without having to wait 16 years. In 16 years' time from now, will it still be relevant to expect a mining company (new on the scene) to wait another 16 years because of this Jaw?</p> <p>Coal mining proponents in the Surat have no interest in disrupting the current or future activities of coal seam gas producers. All we are interested in is gaining fair access to explore and then work in with the development plans of existing gas producers whether this require a wait period of 16 years or 30 years or only a couple of years .It is ridiculously rigid and unworkable to nominate a set period.</p> <p>The problems with overlapping tenure that prompted the creation of the Common Provisions Bill is really a problem specific to the Surat Basin. The inclusion of Division-S which sets the Surat apart from the rest of the State with provisions that are quite unfair to coal producers, makes as previously stated a mockery of the Bill as it will basically achieve nothing where it is most needed!</p> <p>There should be no separate provisions within the Bill for the Surat Basin. There should be provisions that give surety to coal seam gas producers where they are "first on the scene" and require mining companies to work in with their plans of on a case by case basis so that mine development wait periods are minimised.</p>	<p>developing a policy position on the issues, government has attempted to seek a 'middle-ground' position and remain consistent with the principles of the framework.</p> <p>Clause 114 of the Bill provides some flexibility for the parties to agree to a mining commencement date that is earlier than one that is provided in the chapter. However, there seems to be issues of clarity and interpretation with this clause. Therefore the department is investigating options to clarify that the parties may agree to a mining commencement date different to that established in clause 232, therefore making clear the opportunity for the parties to negotiate a truncated notification period.</p>
		Chapter 4, part 4, division 3	Overlapping tenure – Compensation	In circumstances of overlapping tenure where coal companies are either denied access to explore, or denied access to information to allow continuance of study, or a	The department notes Jindal Steel and Power's views regarding annual licence fees and renewal of environmental authorities. However, this is outside the scope of the White Paper.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>prevented from physically starting mining operations e.g. by an arbitrary 16 year wait period; then in these circumstance there should be a provision that allows for the coal company to be compensated financially for the annual cost of renewal of exploration and or mining licenses and Environmental Authorities.</p> <p>There should be a new provision that exempts EPC or MI holders from the payment of annual license fees and renewal of Environmental Authorities while they are prohibited by legislation from undertaking the activities under which the licenses and authorities were issued.</p>	
67	Ms Jane Jones	418 and 420	Notification and objections	<p>I am a resident of the town of Aldershot Queensland. I live within three kilometres of the proposed Colton mine. I believe these changes to the Bill will impact my right to public objection to proposed mine sites which will impact on my lifestyle and surrounding environment. I wish to register my opposition to the proposed Bill changes and retain my right to objection.</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>
71	Lock the Gate Alliance	423 and 424	Notification and objections	<p>The proposed changes will mean far fewer people will be able to object to mining leases and landholder's rights will be weakened. The system is already stacked against</p>	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>landholders and communities and this will make it even worse.</p> <p>It is vital that full objection rights are maintained to ensure that the public interest in the future of Queensland is given a voice. Otherwise, we are handing over our public interests and common rights to foreign-owned mining companies and their shareholders, allowing all the costs and impacts to be incurred on local communities and allowing all the benefits to be shipped offshore. Current legal rights are essential to ensure that the basic public interest is allowed to be explored in a court of law.</p> <p>The Independent Commission Against Corruption in NSW has identified merits appeal rights for the public as a crucial measure to curtail corruption, because a decision-maker that knows any decision they make can be tested in court has to ensure the decision is made well and in accordance with the law.</p>	<p>more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					individual and community interests.
76	Brian Linforth and Sue Crickitt		Notification and objections	<p>We are residents of a township of Aldershot (pop 1042) where an open cut coal mine is proposed within 2.14 kms. From our residences and we have grave concerns regarding dust and noise pollution.</p> <p>The bill being proposed would remove the right of any of us to be able to challenge this project in the land court as our properties are not actually on the proposed mine site.</p> <p>The mine proponents now known as Colton Coal have tried twice before to gain approvals from DERM and now have submitted a third EMP for consideration to Dept. of Environment and Heritage.</p> <p>You will understand our doubts that in spite of hiring probably the best consultants, approval has not been given and the proposal deserves the challenge in court.</p> <p>We have submitted e-petitions / written petitions / submissions to Govt Depts and the Ministers and staged numerous street protests but to no avail.</p> <p>Taking away an individual's right to have a court decide if this mine should proceed is un-Australian and should not proceed!</p> <p>The court assessment would allow a decision, which would not be biased by a Govt. Attitude to create more mines in spite of all other considerations.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals. Coal projects do not meet the eligibility criteria and therefore must be made as a site-specific application for an environmental authority. Therefore, there is no curtailment of community rights for the environmental authority for these projects.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		Refer to pages 6-8 of this table for additional responses to issues raised.			
77	Ms Jayn Hobba	418 and 420	Notification and objections	<p>This bill effectively removes all of our right to prevent mining exploration on our properties by objecting, and just as insidious, the right of our neighbours who have farming interests to also object. In effect, if passed, it means that community consultation is unnecessary.</p> <p>It is the 90% of mining approvals that have one less barrier to overcome rather than the 10%. Communities must have a role in stopping the corruption and erosion of the democratic process.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. The 90% of applications that adjoining landholders and the community will no longer have a right to object to is the 90% of applications that they currently do not object to under either the <i>Mineral Resources Act 1989</i> or <i>Environmental Protection Act 1994</i>.</p>
73 79 90 120 121 132 136 143 147 158 165	<p>Cowan and Helen Keys</p> <p>Raymond and Pamela Howe</p> <p>Bruce and Annette Currie</p> <p>Mrs Lyla Lobwein</p> <p>Mr David Lobwein</p> <p>Ms Judy Pownall</p> <p>Ms Merula Dowdling</p>	39, 40, 43, 45, 54, 67, 68 and 81	The use of regulations	Especially concerned some matters have been left for the regulations to prescribe. How will change in rights be known until after they are passed, how can valuable and considered submissions on the Bill be made, how will the content of the regulations be consulted?	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>

		45	Land access - Right to elect to opt out	Expresses concerns about the benefit of opt-out agreements to landholders, and objects to inclusion within the Bill.	The department notes the concerns raised. However the opt-out agreement framework was recommended by the LAIC Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.
		68	Restricted land - Point when restricted land applies	<p>The proposal for restricted land to only apply at the time of grant places the rights of landholders behind the interests of those extracting the common resource.</p> <p>For example, if a residence is completed 2 weeks after grant of an authority to prospect, the holder can undertake seismic survey as close to my residence as they wish. Such a proposal is unjust to landholders and a degradation of rights.</p>	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity.</p> <p>Restricted land is a new scheme for the petroleum and gas sector; providing additional rights for landholders and occupiers to give consent for activities within a given distance. Regardless of whether restricted land applies, the conduct and compensation agreement (CCA) framework has, and will continue to apply for advanced activities. In the case of the example given, the authority to prospect holder in carrying out a seismic survey would need to have a CCA if it was an advanced activity and also the proximity of the activity would also be governed by conditions on the environmental authority regarding noise, dust, vibration etc.</p>
		68	Restricted land - Definition/ application	<p>The removal of stockyards, bores, dames and other infrastructure from restricted land will place farmers and others at a significant disadvantage in what is already an imbalanced negotiation.</p> <p>Do not want the restricted land regime for mineral and coal activities but supports extending this current regime to petroleum and gas activities.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
		217	Restricted land – Transitional provisions	As a significant amount of tenure has already been granted or applied for, the majority of landholders affected by coal seam gas activity will not benefit from the proposed restricted land framework.	Many agreements have already been made or negotiations commenced based on the existing legislative framework. The application of the proposed restricted land framework to existing granted, or applications for, resource authorities would have a significant impact on all stakeholders. Particularly if a resource Activity has already begun and it has to stop until consent can be gained, or the activity is already subject to a restricted land framework and differences need to be resolved.
		239-266	Notification and objections – Site-	The amendments to the EPA effectively mean that public notification will only be required for site-specific	These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			specific	Environmental Authority applications/variations. Standard applications will not require any form of public notification and, as a consequence of that, a submission cannot be made by a member of the public on such an application, regardless of the impact that it may have. Such a proposal is fundamentally unfair and unjust to Queensland citizens.	<p>Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
		398 and 418	Notification and objections – Affected persons	Under the Bill, a person who lives next door to a proposed open cut coal mine and is likely to suffer impacts such as dust, light and noise disturbance, will have no rights to object to the granting of the mining lease as they do not fall within the definition of an affected person. How can a person who suffers the impacts of the mining lease (i.e. a neighbour) not be an affected person? Why will community groups not be able to have a say about what happens in their community?	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		423 and 424	Notification and objections – Land Court considerations	The submission raised concerns that many issues that the Land Court now considers in hearing an objection to a mining lease and environmental authority will no longer be considered by the Land Court- an independent body but rather the Minister.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7	Legacy boreholes	The major problem with this proposal is that the ability to remediate a bore or well is not strictly limited to 'legacy boreholes'. Under the clause, anyone who is authorised by the Chief Executive can remediate any bore which is emitting gas above the lower flammability limit – i.e. a water bore used by a landholder to water a property. The clause provides for no compensation or notification, yet it effectively enables a person to enter the land and plug a bore that is being used simply because it is emitting gas above the lower	It is important to note that the construction of the section does not require State action in the range of events presented in the submission, e.g. where gas emissions may be above the LFL but are not a safety concern. There is discretion for the State to determine whether or not an authorisation under section 294B is issued. This is extremely important as it allows a process that can respond to a range of circumstances and landholder perspectives, e.g. - the State can choose not to take on the liability and responsibility for remediation action where a landholder did not want a bore remediated even though it technically met the definition of safety concern provided by the three limbs of section 294B; at the

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		part 9 – division 6 part 10 – division 7		flammability limit – which is a comparatively low threshold. There are numerous bores within Queensland that emit varying levels of gas and are relied upon by landholders every day of the week. The proposal contemplated by the clause is therefore simply absurd and requires re-drafting to give effect to the intent of the proposal as explained at page 12 of the explanatory notes.	<p>same time the State can at the request of a landholder authorise a person to take immediate action to remediate a bore or well that is on fire or where gas levels present a risk to their life or property. The legislation is drafted to enable action to be taken where there are safety issues presented by legacy boreholes. There is no Government policy to plug and abandon all legacy boreholes.</p> <p>The anticipated likelihood of incidents as occurred at Kogan (2012) is very low and the Government has been clear that this initiative is not part of an overarching program to deal with all legacy boreholes but rather is directed toward providing a mechanism that if there is an incident that the State can authorise action to remediate the borehole regardless of where it occurs, whether or not the type or origin of the bore can be determined.</p> <p>The situation at Kogan was resolved quickly by a collaborative response from industry and government, and without the specific legislation proposed in the Bill. However, the incident occurred on State owned land and discussions following the incident identified constraints for using the same approach in other circumstances and scenarios. In particular, industry identified matters that would require change before committing to any ongoing involvement in remediation of legacy boreholes. The matters of concern related to access if the incident was on private land or on land that another party had tenure for, indemnity against liability and remediation costs.</p> <p>In the event of a fire or other safety concern requiring immediate action, the department was advised that it may not be possible to determine the type or origin or history of the bore prior to remediation action was taken. There are other scenarios that also contributed to the broad construction of section 294B including: not knowing whether the borehole was an old water bore; historically some coal exploration bores have been “given” to landholders for conversion to a water bore, some may not have been converted, some may have been converted but are now not in use but not decommissioned, and the relevant history of the bore may be unknown to the current landholder. Under the proposed construction if urgent action is needed, because of a fire or other emergency, State authorisation can be granted where these matters are not able to be determined.</p> <p>Therefore, it is intended that the authorisation process be limited to where the department has assessed there is a safety concern requiring action. The assessment process will be done in consultation with the landholder where there is no threat to life or property. The department acknowledges there are a variety of scenarios that would be caught by the construction of section 294B. This reinforces the need for a risk assessment process in determining whether an</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					authorisation is granted. The Petroleum and Gas Inspectorate is equipped to make assessment of risk.
82	Eion and Anne Anderson	45	Land access - Right to elect to opt out	Objects to proposed opt-out agreements.	The department notes the concerns raised by Eion and Anne Anderson. However the opt-out agreement framework was recommended by the LAIC Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.
		Chapter 3, part 4	Restricted land	Strongly objects to the amendments to restricted land.	<p>The department thanks Eion and Anne Anderson for their submission and notes the views expressed.</p> <p>For the first time, landholders affected by future applications by the petroleum and gas sector will gain the right to withhold consent to the majority of resource activities within close proximity to their homes. The restricted land framework also applies to neighbouring buildings outside the boundary of the resource authority where the conduct and compensation agreement (CCA) framework does not.</p> <p>For landholders affected by the mineral and coal sector, the department has consulted on a proposed restricted land distance of 200 metres. This is double the existing distance under the Mineral Resources Act 1989. While stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply, will no longer be restricted land, this infrastructure is already managed under the CCA framework for the petroleum and gas sector. The proposed changes ensure that this approach is consistent across all resource sectors.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7	Legacy boreholes	Strongly objects to the remediation of bores.	The department notes the strong objection to the remediation of bores. The proposed amendments do not require remediation of bores but they do allow action in certain circumstances, e.g. where there is a fire or gas emission that could result in a fire.

		part 9 – division 6 part 10 – division 7			
103	Mr David Loft	418 and 420	Notification and objections	Decreasing communities ability to object to and express community decisions on outside influences such as mining companies interference with their community is not a step towards a stronger society, at best it is decreasing rights and bringing more awareness to the influence that these companies have.	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
104	Mr George Depenning	429	Restricted land	Removal of restricted land status when the miner is granted exclusive surface rights to access land removes one of the few rights of vulnerable landholders. No-one should have the land surrounding their house destroyed by an open-cut mine yet this would be possible under this clause.	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		423 and 424	Notification and objections – Land Court considerations	It is inappropriate to restrict matters that the Land Court can consider and give these powers, such as to consider the 'public interest', to the Minister. Decreasing judicial oversight, increasing ministerial powers and shutting out community participation has worrying implications for corruption.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
		245	Notification and objections – Site-specific	Limiting community notification and formal objection rights to the Land Court to "site specific" environmental authorities will, in conjunction with the above clauses, remove all existing public rights to lodge formal objections to the Land Court in up to 90% of mining projects in Queensland.	These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
105	Mr Justin Leckner	423 and 424	Notification and objections – Land Court considerations	It is inappropriate to restrict matters that the Land Court can consider and give these powers, such as to consider the 'public interest', to the Minister. Decreasing judicial oversight, increasing ministerial powers and shutting out community participation has worrying implications for corruption.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land</p>

					<p>governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
110	Mr Gary Dwyer	Bill as a whole	Bill as a whole	Mr Dwyer opposes the Bill.	The department thanks Mr Dwyer for his submission.
111	Mr Bill Foster	Bill as a whole	Bill as a whole	Mr Foster opposes the Bill.	The department thanks Mr Bill Foster for his submission.
116	Ms Mel Bowman-Finn	245	Notification and objections	<p>Limiting community notification and formal objection rights to the Land Court to "site specific" environmental authorities will, in conjunction with the above clauses, remove all existing public rights to lodge formal objections to the Land Court in up to 90% of mining projects in Queensland. This is unacceptable and fails to recognise the positive impact of community objection rights.</p> <p>Suggestions by State government Ministers that objectors lodge frivolous or vexatious cases is entirely untrue, rather the opposite is true: there are no examples of such cases and objectors are very responsible. In the Alpha coal case (2014) the land holders and conservation group exposed that the mining company had a lack of hard data on groundwater impacts. Public spirited objectors went to Court and saved Ellison Reef (1967) from limestone mining and helped show the importance of protecting Fraser Island, now World Heritage Listed (1971).</p>	<p>These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for the activity), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights on a case-by-case basis. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. 					balanced approach to notification and objections between industry, and individual landholder and community interests.
146	Ms Patricia Cook	Refer to Table 3			
147	Mr Max Scholefield	Refer to Table 3			
148	South Endeavour Trust	239-266	Notification and objections - Standard mining lease applications	<p>The South Endeavour Trust submits the following:</p> <ul style="list-style-type: none"> The Trust is extremely concerned that the provisions in the Bill relating to Mining Lease Applications for Standard projects will seriously reduce and compromise the security of our biodiversity investments. The proposals in the Bill relating to standard mining lease applications provide a major loss of statute law rights for no significant gain. The Trust objects to proposals to restrict who can object to a Standard application. In particular, to remove all rights of adjoining landholders to object is a major reduction in their rights to protect their property interest. The Trust objects to the proposal to remove the right to object on environmental grounds to standard applications. The provisions in the Bill make no provision for uncertainty, something that is critical if informed decisions are to be made. The discussion paper on these changes did not detail what changes were proposed to matters that can be 	<p>Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for the activity), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights on a case-by-case basis.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Eligibility criteria and standard conditions must be developed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process was introduced into the legislation in 2012 and commenced in March 2013. An example of this process is the recent development of the eligibility criteria and standard conditions for petroleum activities (including CSG exploration). The eligibility criteria and standard conditions for these activities were developed in consultation with key stakeholders. Draft eligibility criteria and standard conditions were made available for public consultation through the Department of Environment and Heritage</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>considered by the Land Court. As such there was no actual public consultation on these changes.</p> <p>Whilst there is an argument for streamlining of regulation for large and mega mines of State significance where there is a demonstrable state and/or national benefit. The same arguments do not hold for small miners.</p>	<p>Protection's website. The consultation process was held from 28 February to 22 April 2013 and a report was published which outlines the key issues raised during consultation and the resultant actions or responses from the department. This report is available online at http://www.ehp.qld.gov.au/management/non-mining/documents/eligibility-criteria-standard-conditions-consultation-report.pdf</p> <p>The existing transitional eligibility criteria for mining activities are located in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These eligibility criteria and the standard conditions must be reviewed by March 2016 due to a sunset provision in the transitional arrangements for the legislation which commenced in March 2013. Therefore, the eligibility criteria and standard conditions will be developed through a public consultation process and individuals and members of the community will have a right to have a say about the conditions that govern these small, low risk mines during that process.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
156	Mr Peter Faulkner	Bill as a whole	The use of regulations	The Bill also proposes to legislate by regulation – i.e. leave many crucial matters to be provided for in a regulation and not in the legislation itself. The regulations have not yet been made and such a process is in my view flawed and highly undesirable. It leaves many extremely important issues to be decided by a process far less satisfactory than through our parliament.	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>

This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
163	Ms Astrida Donaldson	398,418 and 420	Notification and objections	<p>Decisions for land use have a process for industries to provide the community the chance to make a submission and to have appeal rights if they disagree with the decision. Mining tenure should NOT be exempt from this basic standard. As a community member I strongly object to the limitation of community notification and formal objection to mining projects in Queensland.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		423 and 424	Notification and objections – Land Court	Allowing decreased judicial oversight, and increasing the powers of State Government ministers, and shutting our community participation will only lead to corruption of the governing processes, which will be detrimental to our land and people.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>

					<p>site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		68	Restricted land – Infrastructure types	Even a mid-size piggery operation may not be a restricted area if it doesn't come under the guidelines prescribed, <i>Environmental Protection Regulation 2008</i> , schedule 2, part 1.	<p>The Environmental Protection Regulation provides thresholds for these types of activities that are regulated under the environmental protection framework. These types of activities are specifically being included in the restricted land framework to recognise the significance of these activities and that they should have a higher level of protection.</p> <p>This proposed inclusion seeks to strike a balance between these intensive animal husbandry and aquaculture activities and resource activities. Aquaculture and animal husbandry activities that fall short of the 'intensive' threshold will still be afforded the protections under the conduct and compensation agreement (CCA) framework that currently applies.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		67	Restricted land – Prescribed distance	<p>A fundamental but extremely important issue in regard to restricted land has been left to later implementation as a Regulation. The definition of 'prescribed distance' at clause 67 means a 'distance prescribed by regulation'.</p> <p>Clause 67 is definitely not an issue to be left in limbo. BSA recommend that CSG wells should not be any lesser than a distance of 600 metres or the mandatory distance prescribed by the EPA for light, noise and dust impacts from a landholder's private dwelling. Further, this buffer distance should apply equally to stock yards, feedlots, piggeries and poultry facilities and similar infrastructure regardless of their size.</p> <p>BSA recommends that harsher penalties for non-compliance to the above and that such penalties should be mandatory.</p>	<p>This and related clauses propose a framework that at its basic level requires resource authority holders to obtain the consent of landholders and occupiers before activities can be undertaken within a certain distance from homes, schools, buildings for business purposes etc. The clause proposes that the actual distances be prescribed by regulation as this can vary depending on the activity type or the type of building or area. The department is of the view that this detail is appropriate to be prescribed by regulation and this aligns with the direction in this Bill to achieve a better balance and effective use of regulations in comparison with the rigid, prescriptiveness of the existing resources Acts.</p> <p>While the distances for restricted land are proposed to be prescribed by regulation under clause 67, a distance of 200 metres has been consulted on in a Regulatory Impact Statement to apply for any exploration and production authorities (e.g. exploration permits, authorities to prospect, mining leases, petroleum leases etc.) and petroleum facility licences, and 50 metres for all other resource authorities including data acquisition authorities, water monitoring authorities and survey licences.</p>
		217	Restricted land – When it applies	<p>BSA recommends this clause needs to be amended to include all resource authorities granted under the P&G Act regardless of the date they were granted.</p>	<p>Many agreements have already been made or negotiations commenced based on the existing legislative framework. The application of the proposed restricted land framework to existing granted, or applications for, resource authorities would have a significant impact on all stakeholders. Particularly if a resource Activity has already begun and it has to stop until consent can be gained, or the activity is already subject to a restricted land framework and differences need to be resolved.</p>
		567	Legacy boreholes	<p>Under chapter 3 of the <i>Water Act 2000</i> (Water Act), landholders whose bores are impacted by CSG activities have an entitlement to have the relevant CSG tenement holder provide a make good agreement providing for make good measures in respect of the impairment of the bore(s). BSA are concerned that section 294B may operate in such a way that landholders will not be able to stop an 'authorised person' from accessing their land and plugging and abandoning a bore, such that they effectively lose their existing right to compensation under the current Water Act make good provisions.</p>	<p>The introduction of section 294B is to authorise action to remediate a legacy borehole that presents a safety concern. It is not related to separate discussions between a landholder and a tenure holder about make good agreements related to coal seam gas impacts on groundwater. The department considers that these amendments do not alter or impair the ability of either party in the discussion of make good agreements. Similarly, the amendments do not alter or impair another landholder initiative to convert old petroleum and gas wells to water bores. It is also noted that routine remediation of legacy boreholes by tenure holders as an authorised activity connected to their tenure is subject to existing regulatory requirements for access, notification including conduct and compensation agreements as well as relevant environmental requirements.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		N/A	Legacy boreholes	BSA proposes that all mining activity must be required to fully restore the landscape at the conclusion of their activities. This should be a built-in cost to their operations. This should apply to all mining and because we have a legacy of abandoned mines, exploration wells etc, the Government should create a fund, contributed to by all miners (including CSG operators), that is used to repair the damage already caused.	The department notes that the matter of costs associated with remediating legacy boreholes is outside the scope of the Bill.
		Additional issues raised by the Basin Sustainability Alliance were very similar to those raised by a number of other submitters. Refer to the outline of issues and the departmental responses provided in Table 3.			
174	Neville & Carmel Stiller	398,418 and 420	Notification and objections - Right to object	<p>Under the proposed new legislation, we, as a neighbouring property would not have a right to object to the activities detailed in the letter that occurred less than 200 metres from our place of residence.</p> <p>It is a fundamental community right to know what mines are proposed in Queensland. Mines have an impact on communities and any member of the community should be able to know what mines are proposed. If we will be affected, or if we are likely to be affected by the decision to approve</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>an environment authority for a mine, then shouldn't we have a right to know about the application and have a say on the application before it is approved.</p> <p>CSG matters should be brought in line with mining lease matters.</p> <p>Owners and or occupiers of neighbouring land, no matter what the distance, should have the right to object to any activity that may have any sort of impact on their life and business. Neighbouring owners and or occupiers impacted should be consulted and a conduct and compensation agreement entered into.</p>	<p>such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		Chapter 3	Land access - Conduct and compensation agreements	<p>Express support for notation of conduct and compensation agreements (CCA) on title and the resource authority being liable for the costs associated with registering and removing the notation on title.</p> <p>Suggests notations should be removed within two weeks of an agreement ceasing, and introducing an ability to have a</p>	<p>The department thanks Neville and Carmel Stiller for their support for the proposed provision.</p> <p>Clause 90(3) currently requires a resource authority holder to remove a notation within 28 days of the agreement ending. This provides a suitable period for resource authorities to remove notations from title.</p> <p>Provisions regarding the review of CCAs have been migrated across from the</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				CCA reviewed every 3 to 5 years.	existing resources Acts and maintain the status quo, providing certainty to all parties upon the execution of an agreement. Clause 99(1)(b) however allows a review of compensation by the Land Court if there has been a material change in circumstances since the agreement.
		45	Land access - Opt-out agreement	Expressed concerns about the benefit of opt-out agreements to landholders and potential utilisation by resource authority holders as an avenue to avoid signing conduct and compensation agreements (CCA), and objects to inclusion within the Bill.	<p>The department notes the concerns raised. However the opt-out agreement framework was recommended by the Land Access Implementation Committee (LAIC) Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.</p> <p>All landholders can refuse to engage in signing an opt-out agreement, and ask for the commencement of negotiations for a conduct and compensation agreement if beneficial for their particular circumstances.</p>
		68	Restricted land – Definition/application	Believes dwellings, bores, stock yards, water storages and dams should continue to be protected under framework. Suggests extending restricted land framework to petroleum and gas tenures.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>Dwellings are captured in the proposed restricted land framework as per the definition of residence in clause 68(1)(a)(i)(A) of the Bill.</p>
		239-266	Notification and objections - Amendments to <i>Environment Protection Act 1994</i>	All changes to environment authorities should be publically advertised. If a change to an environment authority is likely to affect us, then we would like to know and be able to have a say. It should be publically advertised and citizens have a right to have a say in what occurs. We do not accept this proposal.	These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
		<p>Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7</p>	<p>Legacy boreholes</p>	<p>The major problem with this proposal is that the ability to remediate a bore or well is not strictly limited to 'legacy boreholes'. Under the clause, anyone who is authorised by the Chief Executive can remediate any bore which is emitting gas above the lower flammability limit – i.e. a water bore used by a landholder to water a property. The clause provides for no rights to compensation or notification, yet it effectively enables a person to enter my land and plug a bore that is being used simply because it is emitting gas above the lower flammability limit, which is a relatively low threshold.</p>	<p>It is important to note that the construction of the section does not require State action in the range of events presented in the submission, e.g. where gas emissions may be above the LFL but are not a safety concern. There is discretion for the State to determine whether or not an authorisation under section 294B is issued. This is extremely important as it allows a process that can respond to a range of circumstances and landholder perspectives, e.g. - the State can choose not to take on the liability and responsibility for remediation action where a landholder did not want a bore remediated even though it technically met the definition of safety concern provided by the three limbs of section 294B; at the same time the State can at the request of a landholder authorise a person to take immediate action to remediate a bore or well that is on fire or where gas levels present a risk to their life or property. The legislation is drafted to enable action to be taken where there are safety issues presented by legacy boreholes. There is no Government policy to plug and abandon all legacy boreholes. Identification and rehabilitation of all legacy boreholes in Queensland is not necessary, given the low level of risk of some bores to present safety concerns.</p> <p>The anticipated likelihood of incidents as occurred at Kogan (2012) is very low and the Government has been clear that this initiative is not part of an overarching program to deal with all legacy boreholes but rather is directed toward providing a mechanism that if there is an incident that the State can authorise action to remediate the borehole regardless of where it occurs, whether or not the type or</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>origin of the bore can be determined.</p> <p>The situation at Kogan was resolved quickly by a collaborative response from industry and government, and without the specific legislation proposed in the Bill. However, the incident occurred on State owned land and discussions following the incident identified constraints for using the same approach in other circumstances and scenarios. In particular, industry identified matters that would require change before committing to any ongoing involvement in remediation of legacy boreholes. The matters of concern related to access if the incident was on private land or on land that another party had tenure for, indemnity against liability and remediation costs.</p> <p>In the event of a fire or other safety concern requiring immediate action, the department was advised that it may not be possible to determine the type or origin or history of the bore prior to remediation action being taken. There are other scenarios that also contributed to the broad construction of section 294B including: not knowing whether the borehole was an old water bore; historically some coal exploration bores have been "given" to landholders for conversion to a water bore, some may not have been converted, some may have been converted but are now not in use but not decommissioned, and the relevant history of the bore may be unknown to the current landholder. Under the proposed construction if urgent action is needed, because of a fire or other emergency, State authorisation can be granted where these matters are not able to be determined.</p> <p>Therefore, it is intended that the authorisation process be limited to where the department has assessed there is a safety concern requiring action. The assessment process will be done in consultation with the landholder where there is no threat to life or property. The department acknowledges there are a variety of scenarios that would be caught by the construction of section 294B. This reinforces the need for a risk assessment process in determining whether an authorisation is granted. The Petroleum and Gas Inspectorate is equipped to make an assessment of risk.</p>
175	Friends of the Earth Brisbane	418, 420, 423 and 424	Notification and objections -Objection process for mining and Environmental Authority applications	<p>The proposed changes would remove the option for such valid, public interest concerns to be heard by the impartial arbitrators.</p> <p>Narrowing the definition of "affected people" to those who own the land within the Mining Lease area, as Clauses 418 and 420 do, is inappropriate. It disregards the wider</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>community affected by development in the present, it diminishes the rights of first people's dispossessed of their land in the past, and destroys any capacity for intergenerational equity – respect for communities of the future.</p> <p>Community groups and individuals outside the Mining Lease area should retain their existing rights to participate in decisions that impact on them.</p> <p>The public notification system for Mining Lease and Environmental Authority applications should be improved by requiring online publishing of the notices on the departmental and company websites within 24 hours of lodging the applications. The existing system is antiquated and the solution is not to remove almost all notification requirements but put in place a simple, electronic, widely accessible solution.</p> <p>The Land Court should be allowed to continue to arbitrate on technical, complex and specific questions. These mining projects are, by their very nature complex and technical and have very specific impacts. We believe the Land Court is more than capable of understanding and assessing expert evidence of this nature. The removal of powers from the Land Court to the Minister in Clauses 423 and 424 is not necessary and has worrying implications for corruption.</p>	<p>variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>

180	Mr Col Thompson	Refer to Table 3			
181	Marian & Vince Cerqui	Chapter 3	Restricted land – Application	<p>Companies say that they will abide by legislation, but that doesn't happen on site and the land owner is left on his own because there is no policing of the legislation. So by removing Category B Restricted Land Areas (which include principal stockyards, bores or artesian wells, dams or other artificial water storages connected to water supplies) from the proposed legislation will greatly affect not only our livelihood but work place and safety and the welfare of our cattle and livestock.</p> <p>The amendments proposed seek to substantially alter long held principles and rights of land holders in Queensland with virtually no benefits flowing back to us from the proposal.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		239-266	Notification and objections - Amendments to the <i>Environmental Protection Act 1994</i>	<p>The amendments to the EPA effectively mean that standard applications will not require any form of public notification and, as a consequence of that, a submission cannot be made by a member of the public on such an application, regardless of the impact that it may have. I want to be able to object to make submissions on the Environmental Authority, or object to its granting, if the proposal will affect me or the environment regardless of its size.</p> <p>It is a fundamental community right to know what mines are being proposed in Queensland. Mines by their very nature have a fundamental impact on communities and any member of the community should be able to know what mines are proposed.</p> <p>The removal of notification for applications which are not site-specific applications is a blatant denial of natural justice and degrades rights that I currently have.</p> <p>CSG matters should be brought in line with mining lease matters.</p> <p>I do not like the idea of the Minister deciding whether or not applications that propose to vary an environmental authority in a significant way are to be publically notified. In all but cases involving minor variations, applications to vary environmental authorities should be publically advertised and people have a right to have a say in what occurs.</p>	<p>These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publically notified.</p>
		418 and 420	Notification and objections	<p>In regard to the amendments to section 260 of the <i>Mineral Resources Act 1989</i> (QLD) (MRA) - minerals are the property of the Crown and they therefore cannot be held privately by companies. By removing public objection rights regarding the granting of tenure to extract a Crown held resource, I will be denied an opportunity to participate in decisions which will influence a "common resource".</p> <p>Under the Bill, a person who lives next door to a proposed open cut coal mine and is likely to suffer impacts such as dust, light and noise disturbance, will have no rights to object</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>to the granting of the mining lease as they do not fall within the definition of an “affected person”.</p> <p>Why will community groups not be able to have a say about what happens in their community? This proposal is simply unfair, unjust and denies the rights of all Queenslanders to “have a say” about what happens to their lifestyle, community and the “common resource”.</p> <p>I do not like the idea that many issues that the Land Court now considers in hearing an objection to a mining lease and environmental authority will no longer be considered by the Land Court – an independent body but rather the Minister. If I chose I want to be able to have say and have that say heard by an independent person i.e. the Land Court.</p>	<p>therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		217	Restricted land – Point when it applies	<p>The proposal for restricted land areas to only apply if they are used at the time the resource authority was originally granted is concerning as it effectively places the rights of citizens behind those of the interests of persons extracting the “common resource”.</p> <p>The addition of clause 217 effectively means that an overwhelming majority of landholders who are currently affected by coal seam gas activity will not have the “benefit”</p>	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity.</p> <p>Restricted land is a new scheme for the petroleum and gas sector; providing additional rights for landholders and occupiers to give consent for activities within a given distance. Regardless of whether restricted land applies, the conduct and compensation agreement (CCA) framework has, and will continue to apply for</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>of the restricted land framework as a majority of the tenure for the current coal seam gas projects has already been granted or applied for.</p> <p>Why not extend the current MRA restricted land regime to petroleum and gas matters? That would harmonize the different regimes and not dilute landholder rights.</p> <p>The proposal to amend the restricted land regime so far as it relates to mining leases hands far too much power to the Minister who will be able to decide whether or not the mining lease can cover what would otherwise be restricted land. It is virtually turning the situation into one of compulsory acquisition by mining companies of private land.</p> <p>Landholders should be able to decide whether or not a mining lease is over their restricted land particularly when our rights to object to the granting of that mining lease have, in most circumstances, been removed.</p> <p>By not requiring the resource authority holder to obtain a landholder's consent to enter the restricted land under a mining lease, they will most likely be forced to agree and simply have the issue fall to compensation.</p>	<p>advanced activities.</p> <p>Under the proposed framework, there are differences from how restricted land currently applies under the <i>Mineral Resources Act 1989</i>. For mineral and coal exploration permit holders restricted land will apply from the time of grant, rather than at any time. There is also a change for mining claims and leases, and mineral development licences, where restricted land will apply from the time of grant, rather than when the application is lodged.</p>
		Bill as a whole	Legislation by Regulation	<p>Many of the provisions contained in the Bill propose to move numerous aspects of the existing resource acts into regulations. Given this proposal, I ask the following of the Committee:</p> <ol style="list-style-type: none"> 1. How are we to know what rights I will lose or what rights will be amended if the regulations are not made publicly available until after they are passed? 2. How can I be asked to make valuable and considered submissions when numerous crucial definitions and details, which have the potential to interfere with our rights, have been left to be prescribed by regulations? 	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				3. How will I have a say in the content of the Regulations?	businesses, landholders and the community.
		Chapter 3	Land access - Opt-out agreements	<p>An "opt-out" agreement offers very little benefit to a landholder and provides little protection once signed. A landholder already has the option to enter into a Deferral Agreement and I therefore question the inclusion of a further framework which provides yet another avenue for a resource authority holder to avoid entering into a Conduct and Compensation Agreement (CCA).</p> <p>The first step in the negotiation between the landholder and the resource authority holder will be an attempt to get the landholder to "elect" to enter into an opt-out agreement, without knowingly understanding the consequences of entering into such an agreement. This approach tips the scales further in the direction of a resource authority holder in what is already an uneven negotiation.</p> <p>Further, a CCA is effectively an insurance policy – i.e. when things go wrong, I am forced to rely on the terms of the CCA, without it I have very little rights of recourse.</p>	<p>The department notes the concerns raised by Marian and Vince Cerqui. However the opt-out agreement framework was recommended by the LAIC Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy boreholes	<p>The ability to remediate a bore or well is not strictly limited to "legacy boreholes". Anyone who is authorised by the Chief Executive can remediate any bore which is emitting gas above the lower flammability limit – i.e. a water bore used by a landholder to water a property. The clause provides for no rights to compensation or notification, yet it effectively enables a person to enter my land and plug a bore that is being used simply because it is emitting gas above the lower flammability limit – which is a comparatively low threshold. There are numerous bores within Queensland that emit varying levels of gas and are relied upon by landholders every day of the week.</p>	<p>It is important to note that the construction of the section does not require State action in the range of events presented in the submission, eg where gas emissions may be above the LFL but are not a safety concern. There is discretion for the State to determine whether or not an authorisation under section 294B is issued. This is extremely important as it allows a process that can respond to a range of circumstances and landholder perspectives, eg - the State can choose not to take on the liability and responsibility for remediation action where a landholder did not want a bore remediated even though it technically met the definition of safety concern provided by the three limbs of section 294B; at the same time the State can at the request of a landholder authorise a person to take immediate action to remediate a bore or well that is on fire or where gas levels present a risk to their life or property. The legislation is drafted to enable action to be taken where there are safety issues presented by legacy boreholes. There is no Government policy to plug and abandon all legacy boreholes.</p> <p>The anticipated likelihood of incidents as occurred at Kogan (2012) is very low and the Government has been clear that this initiative is not part of an overarching</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>program to deal with all legacy boreholes but rather is directed toward providing a mechanism that if there is an incident that the State can authorise action to remediate the borehole regardless of where it occurs, whether or not the type or origin of the bore can be determined.</p> <p>The situation at Kogan was resolved quickly by a collaborative response from industry and government, and without the specific legislation proposed in the Bill. However, the incident occurred on State owned land and discussions following the incident identified constraints for using the same approach in other circumstances and scenarios. In particular, industry identified matters that would require change before committing to any ongoing involvement in remediation of legacy boreholes. The matters of concern related to access if the incident was on private land or on land that another party had tenure for, indemnity against liability and remediation costs.</p> <p>In the event of a fire or other safety concern requiring immediate action, the department was advised that it may not be possible to determine the type or origin or history of the bore prior to remediation action being taken. There are other scenarios that also contributed to the broad construction of section 294B including: not knowing whether the borehole was an old water bore; historically some coal exploration bores have been "given" to landholders for conversion to a water bore, some may not have been converted, some may have been converted but are now not in use but not decommissioned, and the relevant history of the bore may be unknown to the current landholder. Under the proposed construction if urgent action is needed, because of a fire or other emergency, State authorisation can be granted where these matters are not able to be determined.</p> <p>Therefore, it is intended that the authorisation process be limited to where the department has assessed there is a safety concern requiring action. The assessment process will be done in consultation with the landholder where there is no threat to life or property. The department acknowledges there are a variety of scenarios that would be caught by the construction of section 294B. This reinforces the need for a risk assessment process in determining whether an authorisation is granted. The Petroleum and Gas Inspectorate is equipped to make an assessment of risk.</p>

184	Ms Marial Saren Starbridge	Refer to Table 3			
185	Ms Edith McPheee	Refer to Table 3			
186	Mary River Catchment Coordinating Committee	245, 418 and 420	Notification and objections – Affected persons	<p>The narrow definition of ‘affected persons’ which, for example, excludes neighbours of the property being mined, and other members of the community (particularly those downstream of operations) removes existing public rights to comment and legal recourse regarding proposed mining operations.</p> <p>The procedure for determining which mining applications will allow input from the wider community and those for which only the narrowly defined group of ‘affected persons’ will have rights to information, comment and legal procedures in the Land Court have not yet been explained. Being asked to accept this proposed removal of existing legal rights without knowing the procedure that will determine which applications will be subject to public scrutiny and access to the Land Court is asking Queensland citizens to accept ‘a pig in a poke’ with respect to these proposed changes.</p> <p>Public comment allows for a much broader and more accurate assessment of likely consequences of a proposed activity, and can help avoid very expensive damaging consequences which may show up over time, particularly downstream of a mining development.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available. As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		429	Restricted land	<p>Clause 429 introduces ministerial discretion which would allow a mining authority to be granted over such restricted lands, and then remove all requirements for obtaining the land owner's consent for mining operations within those restricted lands. This effectively reintroduces a large degree of uncertainty about the rights of the owners of restricted land, and opens the door wide open for potentially corrupt and unconscionable behaviour.</p> <p>"Restricted lands" should be clearly and unambiguously defined in law, and all restricted lands be clearly and unambiguously treated the same, clearly codified and predictable manner.</p>	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (Clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		43, 44 and 45	Land access - Allowing "opt out" and deferment of conduct and compensation agreements	<p>It is hard to see that there is any great overall efficiency to be gained in introducing an added level of complexity and potential difficulties into the legislation by introducing the requirement for the creation and registration of additional documented 'opt out' and deferment agreements.</p> <p>Such clauses do risk introducing an increased level of bullying and unconscionable behaviour into the generally</p>	<p>The department notes the concerns raised. However the opt-out agreement framework was recommended by the Land Access Implementation Committee (LAIC) Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>unbalanced negotiations between mining interests and individual landowners, by giving miners new methods for gaining access to a property before a proper, legally informed conduct and compensation agreement can be thoughtfully negotiated by the landholder.</p> <p>It will also introduce a unnecessarily complicated situation under which there are three ways in which a property can be accessed for a mining activity ('opt out', deferred or negotiated conduct and compensation agreement), each of which will need to be documented and recorded against the title of the property, instead of one (via a negotiated conduct and compensation agreement).</p>	<p>designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.</p> <p>All landholders can refuse to engage in signing an opt-out agreement, and ask for the commencement of negotiations for a conduct and compensation agreement if beneficial for their particular circumstances. The opt-out framework has also been designed to avoid adding unnecessary complexity by minimising legislative amendments for opt-out agreements.</p>
187	Goomborian Community Action Group	423 and 424	Notification and objections – Matters to object	<p>"It is not reasonable for individual miners to carry the burden of philosophical debate on whether mining is an appropriate land use through their ML application." (p34) Why not? Why is it more important to destroy some of the most valuable farmland in the world, as in the black soils at Cecil Plains and the rich red volcanic soils in coastal areas, to protect mining interests than to protect the very land that feeds us? Surely objections based on these situations in these areas, against individual mines would have to be valid. Proposed mines in important city water catchment areas would also come into this category.</p>	<p>Areas of strategically important agricultural and cropping lands are able to be protected under the recently commenced <i>Regional Planning Interests Act 2014</i> by declaring cropping as a regional planning interest within the defined area. Under this legislation if a decision is made that the strategic cropping land should be protected from mining activity, mining is precluded.</p>
		420	Notification and objections - Limiting the right to object to a ML application to landholders and local government	<p>"Limiting the right to object to a ML application to landholders and local government" (p vii) removes the right of those affected by environmental issues, most importantly depletion and contamination of ground water and contamination of above ground water, especially by heavy metals in rain water, to object.</p> <p>"Broad public notification of an application (low risk mine) under the MRA will also no longer be required. (p viii) Again this is an attempt to keep the community uninformed about what is going on in the neighbourhood. Just because an application has been made should not mean that it will automatically be approved and therefore the community</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>cannot know it has been granted unless they are notified.</p> <p>"For all ML applications the landholders and local government will be notified directly to ensure issues relevant to the tenure application (including compensation, land access and infrastructure) can be considered during the application process and an objection lodged if required." (p viii) We believe most objections raised would be of environmental concerns affecting the living conditions of the residents in the vicinity so why is environment not included in this list? Is this an indication of the little importance the government places on the environment which sustains us all?</p>	<p>members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		239-266	Notification and objections -Limiting the right to object to individual mining EA applications under the EP Act to site-specific applications	<p>"Limiting the right to object to individual mining EA applications under the EP Act to site-specific applications" (p vii) does not take into account that each area is different and may have different water resources or wind directions and strengths etc. which will mean that the proposed mine would have individual reasons for objections. The people who have lived on these lands for many years often have much better long term knowledge of conditions and should be able to make their objections known.</p> <p>"As objections could no longer be made against the EA"</p>	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				(p28) there would be a significant savings in Land Court costs. This assumes that the Land Court has no valid use but I am sure it does and objections heard through it should not be watered down.	<p>authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>
		429	Restricted land – Mining lease applications	<p>“Reducing the assessment times for the granting of MLs by” “no longer excluding restricted land from the area covered by the grant of the ML.”(p vii) This is unacceptable presuming that this status of restricted activity on the land was placed for a reason and the body responsible for granting the mining approval should not be able to override it. We liken this on a smaller scale to changing the protected status of The Great Barrier Reef.</p>	<p>The department notes that no assessment times for relevant considerations under the <i>Mineral Resources Act 1989</i> have been reduced.</p> <p>The effect of the current process is to exclude mining activity from areas of restricted land by excluding the land from the mining lease entirely. In those situations that the miner subsequently enters into an agreement with a landholder that the area can be mined a separate application must be made for each area of restricted land.</p> <p>At the time the application is made the land would be assessed for its appropriateness to be mined.</p> <p>The proposed amendments would include the area of restricted land in the mining lease area but all mining activity authorized by the mining lease would still be excluded from the land without the owner's consent.</p> <p>In this situation the suitability of the land to be mined is assessed under exactly the same criteria as is currently the case except that it is assessed when the original application is made.</p> <p>The saving in time results from having the assessment of the suitability of the land for mining done up front rather than having to make a separate application at a later date.</p> <p>There will be no reduction in the assessment of the land under the proposed process.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		423 and 424	Notification and objections -Objection rights under the MRA	"Objection rights under the MRA will clarify which issues can be objected to under the respective jurisdictions" (p ix). Any country person recognises that each property is different so why is there to be a prescribed list of things which can be objected to? We do not believe it is possible to cover every scenario in such a list.	The matters that a landholder can object to are broad and include: the extent, type, purpose, intensity, timing and location of operations, the current and prospective uses of the land; and whether the proposed operation conforms with sound land use management. These matters would be considered with regard to the existing use of the land and as such are relevant to each situation in which a mine is proposed.
188	Mr David Arthur	Refer to Table 3			
189	Ms Jude Garlick	420	Notification and objections – Affected persons in the Galilee Basin	<p>The removal of public notifications and rights to object to the Land Court of Queensland concerning most proposals for mine development (all those apart from an estimated 10 per cent of 'high risk' projects) amounts to a serious curtailment of democracy</p> <p>I am especially concerned about the restriction that permits 'affected persons' only to object to the decision to grant a mining lease tenure. I would be grateful if you could explain to me how it could be considered reasonable or legitimate that landholders in the Galilee Basin, for example, who may not be adjoining the property on which mining is to occur nor be required to provide access for development, yet share a common groundwater supply, which will be affected by drawdown from the mine, are not classed as 'affected persons' and given the right to object to potential risk to their livelihood.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
190	Ms Bernice Thompson	Refer to Table 3			
191	Landholder Services Pty Ltd	68	Restricted land	<p>This Bill is a further example of a manipulative administration opting to make something as fundamental as the distance of restriction or buffer zone a matter for regulations. It is a clear case where there is no good reason not to specify the distance in the Act and by hiding the decision from public scrutiny the Government invites doubts about its trustworthiness.</p>	<p>This and related clauses propose a framework that at its basic level requires resource authority holders to obtain the consent of landholders and occupiers before activities can be undertaken within a certain distance from homes, schools, buildings for business purposes etc. The clause proposes that the actual distances be prescribed by regulation as this can vary depending on the activity type or the type of building or area. The department is of the view that this detail is appropriate to be prescribed by regulation and this aligns with the direction in this Bill to achieve a better balance and effective use of regulations in comparison with the rigid, prescriptiveness of the existing resources Acts.</p> <p>While the distances for restricted land are proposed to be prescribed by regulation under clause 67, a distance of 200 metres has been consulted on in a Regulatory Impact Statement to apply for any exploration and production authorities (e.g. exploration permits, authorities to prospect, mining leases, petroleum leases etc.) and petroleum facility licences, and 50 metres for all other resource authorities including data acquisition authorities, water monitoring authorities and survey licences.</p>
		68	Restricted land - Definition/application	<p>The claim that stock yards and water facilities are better managed under the conduct and compensation framework is wrong because conduct and compensation agreements are not required for preliminary activities, so an explorer is free to</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				disturb stock with impunity.	<p>(CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
		68	Restricted land – Point when it applies	The proposal as it stands penalises owners who develop and improve their properties as for exploration permits, nothing built in the future will have restricted land protection.	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity.</p> <p>Regardless of whether restricted land applies, the conduct and compensation agreement (CCA) framework has, and will continue to apply for advanced activities.</p>
		252	Notification and objections – Issue of Mining Lease Notice	To force the department to do its job, the proposed new section 252 should include a time period commencing on the day of lodgment within which the notice must be issued, failing which the application lapses.	The application lodged under section 245 is not formally accepted until all of the requirements of the Act have been met. Under the proposed amendments a notice under section 252 will be issued once the Acts pre-requisites are met. Under the current process two notices are issued, one when the application is lodged and a second when the application is accepted as complying with the Act.
		260	Notification and objections – Affected person	A mining proposal is typically far more threatening to adjoining or nearby landholders than to those whose land is directly affected because they stand to either be bought out or compensated.	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		260	Notification and objections - Grounds of Objection	<p>Nowhere do we find a better example of the bias and lack of understanding behind this 'reform' than section 260(4) where the scope for an affected landowner's objection is restricted to just four of the issues upon which the Court must report to the Minister. Those four proposed grounds are quite OK as topics for the Court's report to the Minister, but have little merit as grounds of objection.</p> <p>Real issues which are provable, such as the lease applicant's past performance, or whether the shape and size and area of the proposed lease are justified, or whether the land is mineralised, will no longer be permitted as grounds of objection. In my view these regimented but inconsequential grounds, which are near impossible to support with evidence, would deter a properly informed landholder – even one directly affected – from lodging an objection to a mining</p>	<p>The proposed provisions in section 269(4) reflect modern drafting style and cover the substantive matters on which a landowner may object to the Land Court and include: the extent, type, purpose, intensity, timing and location of operations, the current and prospective uses of the land; and whether the proposed operation conforms with sound land use management.</p> <p>How the Land Court interprets these provisions in terms of the objections it will entertain has yet to be determined.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>lease application.</p> <p>The owners of the land in future won't be able to object on the grounds of lack of proof of mineralisation any more.</p>	
		239-266	Notification and objections – standard applications and site-specific applications	<p>The Government proposes to restrict notification of environmental authority applications, and the right to object, to the high-impact site-specific applications – i.e. every other application will be classed as standard and will proceed on standard conditions. Its justification is that the standard conditions are set after public consultation – completely overlooking the fact that Government officers will decide a project's eligibility for the standard treatment.</p> <p>It is an incredibly blinkered view that there need be no provision for objections because an application is classed as standard. People should be able to challenge the validity of the department's classification, and to submit that additional conditions are required, and if relevant to submit evidence that the applicant's past performance as holder of an authority was unsatisfactory.</p>	<p>Eligibility criteria and standard conditions must be developed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process was introduced into the legislation in 2012 and commenced in March 2013. An example of this process is the recent development of the eligibility criteria and standard conditions for petroleum activities (including CSG exploration). The eligibility criteria and standard conditions for these activities were developed in consultation with key stakeholders. Draft eligibility criteria and standard conditions were made available for public consultation through the Department of Environment and Heritage Protection's website. The consultation process was held from 28 February to 22 April 2013 and a report was published which outlines the key issues raised during consultation and the resultant actions or responses from the department. This report is available online at http://www.ehp.qld.gov.au/management/non-mining/documents/eligibility-criteria-standard-conditions-consultation-report.pdf</p> <p>The existing transitional eligibility criteria for mining activities are located in schedule 3A of the <i>Environmental Protection Regulation 2008</i>. These eligibility criteria and the standard conditions must be reviewed by March 2016 due to a sunset provision in the transitional arrangements for the legislation which commenced in March 2013. Therefore, the eligibility criteria and standard conditions will be developed through a public consultation process and individuals and members of the community will have a right to have a say about the conditions that govern these small, low risk mines during that process.</p>
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 –	Legacy Boreholes	<p>The Government had acted to recognise and make some provision for dealing with open boreholes which emit gas. That may be a useful start if I am correct in thinking that the massive dewatering that is occurring to liberate CSG will not only cause significantly greater incidence of gas escaping from disused open holes, but will affect water bores.</p>	<p>The amendments support action under a State authorisation where water bores are affected by gas emissions.</p>

		division 6 part 10 – division 7			
		Bill as whole	The use of regulations	Some fundamental elements of the Bill have been made matters for the regulation without any good reason.	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>
192	North Queensland Land Council	Bill as a whole	Use of Regulations	Concerned about use of regulations to prescribe detailed technical and procedural matters.	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		12 and Schedule 1	Definition of owner	NQLC submits that express provisions need to be made in the Bill to include native title holders as "owners of land" in either schedule 1 of the Bill or in s 12.	<p>The definition of owners of land provided in schedule 1 of the Bill maintains the status quo with respect to native title holders.</p> <p>The Commonwealth <i>Native Title Act 1993</i> provides for native title interests requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the consolidation of the resources legislation into a single Act. Additionally the Queensland <i>Aboriginal Cultural Heritage Act 2003</i> provides for the protection of aboriginal heritage and cultural practices.</p>
		94	Land access - Land Court may decide if negotiation process unsuccessful	<p>The NQLC generally supports that the Land Court should have wide powers.</p> <p>Because private land is provided in s13(1)(b) of the Bill to include an interest in land less than fee simple held from the State under another Act, there may be a small number of cases where, by the operation of s 47 of the <i>Native Title Act 1993</i>, native title parties as pastoral lessees and/or board members of registered native title prescribed bodies corporate and/or company shareholders may be involved in negotiations for access to private land. The NTA provides a process for when a lack of good faith is alleged in relation to negotiations concerning a future act. It is questioned whether the expansion of the Land Court's jurisdiction in this area is intended to replace the NTA process when native title parties are involved in negotiation for access to private land when that access would constitute a future act or whether the Land Court is to be used only when there is no native title party involved in the negotiations.</p>	There is no intention for the proposed expansion of the Land Court's jurisdiction to replace the NTA process.
		Chapter 3	Land access - Requiring the Resource authority holder to note the existence of an executed conduct and compensation agreement on the certificate of title at	This amendment is supported by the NQLC because noting the certificate of title will make it far clearer for any person dealing subsequently in the relevant land and will ensure that the conduct and compensation agreements "run" with the land and bind successors	The department thanks the NQLC for their support for the proposed provision.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			their own cost		
		45	Land access – Opt out	While opting out is voluntary and at the request of the owner of land, it does need to be kept in mind that there is likely to be inequality of bargaining power between the owner of land and the resource industry party. Avenues at common law, such as breach of contract, misrepresentation and fraud are expensive and are likely to involve legal representation. This may be beyond the financial reach of native title holders if, by the operation of s 47 of the <i>Native Title Act 1993</i> , they are involved in negotiation of formal conduct and compensation agreements in relation to private land should they choose to opt out.	<p>The department notes the concerns raised. However the opt-out agreement framework was recommended by the Land Access Implementation Committee (LAIC) Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.</p> <p>All landholders can refuse to engage in signing an opt-out agreement, and ask for the commencement of negotiations for a conduct and compensation agreement if beneficial for their particular circumstances. Landholders concerned about the process for resolving a dispute associated with an opt-out agreement will be able to refuse to sign and request the negotiation of a conduct and compensation agreement.</p>
		420	Notification and objections – Affected persons	The original proposal to restrict the notification of mining lease applications is noted to have been modified so that now occupiers of land, infrastructure providers and local governments will receive notification. It is uncertain if this is intended to circumvent the notification provisions of the <i>Native Title Act 1993</i> in circumstances where native title holders and registered native title claimants should receive notice but, if so, that should not occur because the processes of Commonwealth legislation must be followed.	<p>The Commonwealth <i>Native Title Act 1993</i> provides for the interests of native title claimants, requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the Bill.</p> <p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		239-266	Notification and objections – Site-specific	<p>Pursuant to the Bill, 90 per cent of mining lease applications will not now be publically notified. Only site specific mining applications will receive full public notification. If this is intended to circumvent the notifications of the <i>Native Title Act 1993</i> so that only 10 per cent of mining lease applications receive public notification, native title holder and potential native title claimants may not be aware of activities that could potentially impact on their native title rights and interests so they may not be able to take appropriate action.</p> <p>The NQLC requests that it be kept fully informed of the review into what activities are considered to be low impact which is said to be taking place in the next 12 months.</p> <p>NQLC is of the view that native title representation would be</p>	<p>The Commonwealth <i>Native Title Act 1993</i> provides for the interests of native title claimants, requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the Bill.</p> <p>Eligibility criteria and standard conditions must be developed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process was introduced into the legislation in 2012 and commenced in March 2013. An example of this process is the recent development of the eligibility criteria and standard conditions for petroleum activities (including CSG exploration). The eligibility criteria and standard conditions for these activities were developed in consultation with key stakeholders. Draft eligibility criteria and standard conditions were made available for public consultation through the Department of Environment and Heritage Protection's website. The consultation process was held from 28 February to 22 April 2013 and a report was published which outlines the key issues raised during</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				required on the review panel to achieve a balanced outcome as well as full consultation with native title holders during the conduct of the review.	consultation and the resultant actions or responses from the department. This report is available online at http://www.ehp.qld.gov.au/management/non-mining/documents/eligibility-criteria-standard-conditions-consultation-report.pdf The existing transitional eligibility criteria for mining activities are located in schedule 3A of the <i>Environmental Protection Regulation 2008</i> . These eligibility criteria and the standard conditions must be reviewed by March 2016 due to a sunset provision in the transitional arrangements for the legislation which commenced in March 2013. Therefore, the eligibility criteria and standard conditions will be developed through a public consultation process and individuals and members of the community will have a right to have a say about the conditions that govern these small, low risk mines during that process.
		57	Land access - Entry on to land	Clause 57 of the Bill provides that only the public land authority will receive notice in the form of a periodic entry notice. Determinations of native title occur over public land and the Bill should be amended to ensure that where there has been a determination of native title in relation to public land, the native title holders are also provided with an entry notice when access is being sought for an authorised activity.	The Bill makes amendments to the entry notice provisions for public land, but does not affect native title interests. The Commonwealth <i>Native Title Act 1993</i> provides for native title interests requiring that they be notified when an application is made over relevant land. This requirement will not be affected by the consolidation of the resources legislation into a single Act. Additionally the Queensland <i>Aboriginal Cultural Heritage Act 2003</i> provides for the protection of aboriginal heritage and cultural practices.
		68	Restricted land - Prescribed distances for particular infrastructure	Clause 68 of the Bill provides for prescribed distances in relation to restricted land for particular infrastructure including places of worship, cemeteries and burial grounds. NQLC requests that flexibility be provided in relation to places of worship and burial grounds as the Aboriginal concept of these places and the non-Aboriginal concept differ. Currently the distances provided of 200m and 50m respectively are not considered to be sufficient.	While the restricted land framework will apply to aboriginal burial places, the primary protection framework for aboriginal heritage, including burial grounds and places of worship, is through the Queensland <i>Aboriginal Cultural Heritage Act 2003</i> and to the extent it applies, the Commonwealth <i>Native Title Act 1993</i> .
		386-390	Incidental coal seam gas - Impact on native title	NQLC totally rejects the department's view that there is no impact on native title when gas produced on a mining lease incidental to coal mining is used commercially or beneficially. This is because the right to negotiate process that occurred in respect of the grant of the mining lease would not have dealt with the additional aspect of coal seam gas because	It is the department's view that the amendments have no greater effect on native title which would require any renegotiation of agreements.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				currently, gas extracted incidentally cannot be used beneficially or commercially. Significant future financial gains will be achieved by the mining proponents from using incidental gas. The Bill should provide that relevant s31 agreements and Indigenous Land Use Agreements should be permitted to be revisited to enable re-negotiation by native title holders and registered native title claimants in relation to incidental gas.	
193	Ms Alexandra Mercer	Refer to Table 3			
194	Ms Carol Booth	Refer to Table 3			
195	Friends of Felton	Refer to Table 3			
196	Mr Ian Wilson	Chapter 9, part 3, division 4 and chapter 9, part 7, division 9	Notification and objections	<p>The Greentape Reduction legislation has already seriously reduced the public notification process where an EIS was undertaken apparent under the assumption that making an EIS available is sufficient public notice for major projects. This misunderstands the role of an EIS in identifying potential issues and management options for various alternatives of project design. It is then used to develop conditions and it is meaningless trying to make submissions on the options in an EIS until the proposed conditions are developed.</p> <p>At the other extreme, for small projects, the belief that all standard application will not have impacts misunderstands the way the criteria for standard activities are developed by government departments. Department make these general conditions on the basis of incomplete information. There is no way that all local knowledge is captured by the Departments when developing standard conditions and it is quite possible that mining will have impacts outside the area of the mining tenement, hence the desirability of continuing</p>	<p>An EIS for a coordinated project under the <i>State Development and Public Works Organisation Act 1971</i> (SDPWO Act) includes assessment of significant environmental effects. Last year, the Coordinator General published a generic Preparing an environmental impact statement Guideline for proponents which states that:</p> <p>"The objective of the EIS is to ensure that all potential environmental, social and economic impacts of the project are identified and assessed; and that adverse impacts are avoided, minimised or sufficiently mitigated. Direct, indirect and cumulative impacts must be fully examined and addressed. The project should be based on sound environmental protection and management criteria."</p> <p>Consequently, it is the Queensland Government's view that requiring additional notification of the environmental authority application is unnecessary duplication of process.</p> <p>Eligibility criteria and standard conditions must be developed through the process outlined in chapter 5A of the <i>Environmental Protection Act 1994</i>. This process was introduced into the legislation in 2012 and commenced in March 2013. An example of this process is the recent development of the eligibility criteria and standard conditions for petroleum activities (including CSG exploration). The eligibility criteria</p>

				the existing process of advertising all mining lease applications.	and standard conditions for these activities were developed in consultation with key stakeholders. Draft eligibility criteria and standard conditions were made available for public consultation through the Department of Environment and Heritage Protection's website. The consultation process was held from 28 February to 22 April 2013 and a report was published which outlines the key issues raised during consultation and the resultant actions or responses from the department. This report is available online at http://www.ehp.qld.gov.au/management/non-mining/documents/eligibility-criteria-standard-conditions-consultation-report.pdf
		420	Notification and objections – Affected persons	The Bill reduces the notification of mining applications to very narrowly defined 'affected person'. This is not justified as there have been very few trivial or vexatious objections received since this process began in 1969. People only object when they have genuine concerns.	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		35	Dealings, caveats and associated agreements	This section gives the authority holder a unilateral right to have an associated agreement removed from the register. This would appear to apply to a compensation agreement. That is not an appropriate outcome.	<p>Associated agreements are defined under clause 32 to be an agreement relating to a resource authority. Generally these agreements will have a commercial nature and are separate to the conduct and compensation agreements required under Chapter 3 of the Bill.</p> <p>The requirements proposed by the Bill, to record and remove a conduct and compensation agreement from the land title register is provided under clause 90.</p>
		37	Land access	It should not have been difficult to include prospecting permits, mining claims and mining leases in this provision, despite the existing entry arrangements for these authorities under the <i>Mineral Resources Act 1989</i> .	<p>The objective of the Bill is to migrate and consolidate common processes and requirements that are duplicated across each of the existing resources Acts.</p> <p>Prospecting permits, mining claims and mining leases have separate processes that are unique to these tenure types. For example, access and compensation for mining leases is resolved as part of the application-grant process. While the land access framework applies post-grant.</p>
		46	Land access – Access agreements	Why aren't access agreements applied to mineral development licences under the <i>Mineral Resources Act 1989</i> .	The access agreement requirements for off-tenure access are not required for mineral development licences as this is dealt with through the application-grant process. Section 183 of the <i>Mineral Resources Act 1989</i> requires access land to be identified through the application process and included in the area of grant for a mineral development licence.
		56	Land access – Public land	It should not have been difficult to include prospecting permits, mining claims and mining leases in this provision, despite the existing entry arrangements for these authorities	The objective of the Bill is to migrate and consolidate common processes and requirements that are duplicated across each of the existing resources Acts.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				under the <i>Mineral Resources Act 1989</i> .	Prospecting permits, mining claims and mining leases have separate processes that are unique to these tenure types. For example, access and compensation for mining leases is resolved as part of the application-grant process. While the land access framework applies post-grant.
		69	Restricted land – Relevant owner or occupier	Subsections (1)(a)(iv) and (1)(b) appear to be contradictory.	Clause 69 does not have the corresponding subsection references. However, it appears the submitter is referring to clause 68 which defines restricted land. The references to identifying land through a regulation as being either restricted land or not restricted land is to allow for flexibility to adapt to circumstances as they evolve, particularly as this will apply to future applications from the petroleum and gas industry for the first time.
		71	Land access – Compensation agreement	Having a compensation agreement and complying with it may not be relevant to accessing a restricted area (like the landholder's house). This needs rewording to ensure the access is covered by the agreement.	Restricted land for a mining lease is resolved through the mining lease application-grant process under the <i>Mineral Resources Act 1989</i> (MRA) only when the Minister considers that the activities carried out on the restricted land, cannot coexist. In this case a compensation agreement is required under the MRA for that land (clause 429). Clause 71 then provides an exclusion from the Chapter 3 restricted land access framework where a compensation agreement has been entered into.
		73	Land access – Access across another resource authority area	If this provision does not apply to prospecting permits, mining claims and mining leases, what process applies when they are the first resource authority?	The objective of the Bill is to migrate and consolidate common processes and requirements that are duplicated across each of the existing resources Acts. Prospecting permits, mining claims and mining leases have separate processes under the <i>Mineral Resources Act 1989</i> , for managing these issues.
		119	Overlapping tenure	18 months notice seems unnecessarily prescriptive and rather excessive.	The department notes Mr Ian Wilson's concerns with the clause. However, the proposed legislative amendments in the Bill have been developed to meet the agreed position as provided in the White Paper.
		145	Overlapping tenure	The requirement for the Column 2 activity to have commenced could delay the Column 1 activity.	The department notes Mr Ian Wilson's concerns with the clause. The department is investigating options to clarify the matter.
		149	Overlapping tenure	Subsection (6) requires the provision of operating or development plans to the Column 1 holder which could provide a significant commercial gain, just for taking out an overlapping tenement.	The department notes Mr Ian Wilson's concerns with the clause. The department is investigating options to clarify the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		476	Mount Isa Mines	The proposed new Agreement for Mount Isa Mines appears to adequately remove superfluous provisions in the previous Agreement.	The department thanks Mr Ian Wilson for his submission.
197	Ms Margaret Doyle	Refer to Table 3			
198	Rosewood District Protection Organisation Inc.	Refer to Table 3			
199	John Gerard Erbacher	68	Restricted land – Definition/application	<p>Submits that infrastructure such as water bores, dams, tanks, troughs, associated water pipelines and stock yards (and the land 50 metres for each) should be included in the definition of restricted lands.</p> <p>Suggests that a 'fair and reasonable principle' be introduced for negotiating a conduct and compensation agreement over restricted land, which could also be extended to determinations over breaches the 50 metre restricted zone buffer requirements.</p> <p>Mr Erbacher submits that there is a good argument to include irrigation dams and ring tanks, head ditches and tail water drains to reduce the risk of potential damage to this infrastructure from the activities of the authority holder, and the possible contamination from accidental intrusion of toxic drill waste.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
				Restricted Land should probably not be excluded from the Mining Lease, but continue as Restricted Land retaining its "Compensatable Effect" as long as the landholder retains ownership of the property.	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		420	Notification and objections -Affected person	<p>Mr Erbacher submits that clause 420 needs to be amended to include "(d) an owner of land or public user amenity in close proximity to land mentioned in paragraph (a)."</p> <p>Mr Erbacher further submits that it appears that the intent is that only those landholders within the footprint of the mine site will have the right to object to the mining lease. Any landholder who has land over an affected aquifer or is on adjacent aquifer where leakage or depressurization may occur is an "affected person" and should be recognized as such. This legislation seems tailor made to stop objections such as those already made to the Land Court by landholders who are concerned that they may lose one of their factors of production, namely water. "Quantity" of groundwater is not classed as an environmental value in the Environmental Protection Act (EPA) so cannot be objected to under the EPA. This is a very important issue and landholders should not be disadvantaged to accommodate medium to large mining projects.</p> <p>Mr Erbacher further submits that a person in close proximity to a mine, who feels that their property or residence will be devalued, or their business adversely affected by the activities of a mine (e.g. road closures, increased traffic on their road, increased damage to road infrastructure) should be able to object to the mining lease and present their evidence in the Land Court.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		186	Registers	<p>Mr Erbacher submits that a register, probably included in Resource authority register section 186: Register to be kept, should be compiled to detail information on all exploration and production drill holes, back to a prior date to be determined following advice from a reliable expert. Information on register would include:</p> <ol style="list-style-type: none"> date when hole drilled tenement number and holder drill hole number and GPS coordinates status of the drill hole (capped, capped and plugged, open and productive etc.) date when bore hole status amended. 	<p>The department thanks Mr Erbacher for his submission and the department has noted his comments.</p> <p>In relation to recording legacy wells that are petroleum wells, detailed records about the wells (including that as listed by Mr Erbacher in his submission) are already kept by the chief executive of the department.</p> <p>This information is available to the public in limited amounts, for example through Mines Online or MinesOnlineMaps located on the department's website, subject to confidentiality.</p> <p>In relation to mineral (including coal) legacy boreholes, no similar information is kept in a database. While much of the information about these types of boreholes is detailed in reports about authorised exploration activity, required by legislation, the resources required to extract these details would be substantial. Given that in recent times, there has only been one reported bore that has posed a potential safety risk, the value of extracting all of this information is unlikely to be commensurate with the resources that would need to be allotted to the task.</p>
		80	Land access - General liability to compensate	Suggested that landholder's time spent negotiating should be compensated for.	In respect to negotiating CCAs, the Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					recommendations, including advice regarding the current heads of compensation, in addition to the consolidation of land access provisions.
		94	Land access - Land Court may decide if negotiation process unsuccessful	Expressed desire that concept of uncooperative landholder should not be enshrined in Bill by inference, suggesting that resource companies frequently have displayed an unwillingness to cooperate during negotiations.	The department is committed to implementing the LAIC Report recommendations, including recommendation 1(b) requiring legislative change to expand the jurisdiction of the Land Court to allow the court to examine the behaviour of the parties during negotiations. This will ensure the Land Court has clear jurisdiction to make orders, where appropriate, requiring parties to continue negotiations. This will encourage parties to negotiate in good faith during the initial negotiation stages.
		246	Notification and objections – Coordinator-General's report and approval	Mr Erbacher submits that a submitter to the environmental impact statement (EIS) and any subsequent supplementary EIS should have the right to object to the mining lease or draft environmental authority in the Land Court on conditions or statements in the Coordinator-General's report, if these conditions or statements are not consistent with the information contained within the EIS.	The Land Court has repeatedly ruled that it is unable to consider conditions set by the Coordinator-General. Once an objection is made the Court is required under both the <i>Mineral resources act 1989</i> and <i>Environmental Protection Act 1994</i> to consider the objection, they cannot be dismissed prior to hearing. As a result, where the only conditions that are objected to are conditions set by the Coordinator General, the application is unnecessarily delayed and both the applicant and objector are subject to unnecessary costs. Therefore the Bill formally precludes the existing situation where conditions cannot be appealed and reduces costs and red tape.
200	Ms Susan Beetson & Jeff Hawley	418 and 420	Notification and objections	I vehemently oppose and am sincerely concerned about clauses 418 and 420 which remove existing community notification rights and rights to object to mining lease applications. Being only 8km distance from an open cut coal mine means we will be exposed directly to coal dust completely covering our property and everything on it. Our food will also be covered in dust particles from the open cut coal mines if they go ahead and we will not have an opportunity to object despite being directly affected. We believe we have the right to be formally notified of any proposed change to the livability of our community and our entire region and that we also have the right to formally object and to take the matter to Court if necessary. We also believe anyone has the right to be formally notified and also submit formal objections and appear in Court to assist and advocate for community members and the rights of entire	These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016. This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				communities.	under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i> . Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.
		Additional issues raised by the Ms Susan Beetson and Jeff Hawley were very similar to those raised by a number of other submitters. Refer to the outline of issues and the departmental responses provided in Table 3.			
201	Arnold Rieck	245, 418, 420, 423, 424 and 429	Notification and objections	<p>Objects to removal of existing community notification rights and rights to object. Residents of Rosewood suffering consequences of dust, noise and light pollution, destruction of habitat and scenic value of district.</p> <p>Notes that effects of mine spread further than specific site of mining project and objection rights shouldn't be limited to</p>	These changes only affect notification of environmental authorities associated with mining leases, not other types of mining activities (e.g. Mineral Development Licences, Mining Claims and Exploration Permits). Numerically, the majority of mining leases in Queensland carry low environmental risk (i.e. because the activity meets the eligibility criteria for consideration as a standard or variation application), and as such, a standard or variation application will apply. These standard and variation applications will not be subject to notification or objection rights. Please

				<p>residence.</p> <p>Object to mining companies being able to walk away from leases without full rehabilitation.</p>	<p>note, however, that there is an opportunity for the community to have a say through a review of the eligibility criteria and standard conditions for mining activities which must be completed before 31 March 2016.</p> <p>This change reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p>
202	Property Rights Australia	Bill as a whole	General	<p>It is laudable that efforts are made for effective simplified, standardised legislation and regulation across all resource activities and some provisions are sensible and necessary. However PRA believes that the balance is not in favour of landholder rights.</p>	<p>The department thanks Property Rights Australia for their conditional support of the proposed amendments.</p> <p>The department believes that the amendments in the Bill achieve the objectives of the MQRA Program. The level of protection for landholders will be maintained under the common provisions Act and in some areas improved. An example of this is the adoption of the restricted land framework across all resource authorities. For the first time, landholders affected by future applications by the petroleum and gas sector will have a right to say no to most resource activities within close proximity to their homes.</p>
		420	Notification and objections – Affected persons	<p>The effects of some mining projects are so wide ranging that PRA would contend that there are many neighbours and even non-neighbours who will be more “directly affected” than many simply offering access. Some will be on the same watercourse, aquifer or connected aquifer. Others will suffer production losses and/or loss of amenity.</p> <p>The evidence is that there have been no landowner objections which were not based on genuine concerns.</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include:</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>Experience has already shown and predictions suggest that the effects of many resources activities will affect many more landowners and businesses than those within the footprint.</p> <p>Recommend: The definition of "directly affected" landowners and thereby who is allowed to make objections must be expanded to include immediate neighbours and everyone in the local community likely to be subjected to problems of dust, noise, access and loss of amenity including those for many kilometres impacted by water drawdown in aquifers or downstream of mining activity which may affect the water course.</p> <p>Recommend: Public notifications should be transparent, in plain English and with full details easily available to those in the direct footprint and to immediate neighbours and everyone in the local community likely to be subjected to problems of dust, noise, access and loss of amenity including those for many kilometres impacted by water drawdown in aquifers.</p>	<p>numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		Chapter 3	Land access	<p>It is a cynical exercise to claim that property owners have certain rights or enhanced rights if they have no time or ability to exercise them.</p> <p>Many, many landowners are reporting that at least one member of their business unit is having to become a full time</p>	<p>In respect to negotiating conduct and compensation agreements, the Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>resources person with no allowance for their time. This is particularly the case where landowners are dealing with multiple resources and infrastructure companies.</p> <p>The concept of uncooperative landholder should not be enshrined in the Bill even by inference. PRA objects strongly to the genuine concerns of landowners being overridden in an attempt to speed up the process on behalf of mining companies. If they want to speed up the process they can pay proper compensation and take care of the concerns of landowners.</p> <p>Landowners simply trying to get a fair deal for themselves, their businesses and their family safety and trying not to have their time wasted are not being uncooperative. Landholder's time is treated as valueless and not compensated for. Mining companies are all too willing to waste time, call unnecessary or unproductive meetings, be inflexible with meeting times and offer no new information. These meetings are held by people who, unlike the landholder are on a payroll. Landholder's time should be paid for and it might not be wasted so readily.</p> <p>Recommend: The concept of "unco-operative landholder" should not exist much less be built on. There are sufficient legal avenues at every stage for it to be unnecessary.</p>	<p>evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation, in addition to the consolidation of land access provisions.</p>
		N/A	Notification and objections	<p>Landowners have also pleaded with Government to lengthen timeframes to respond to mining leases and environmental authorities. The limited notification, concurrent timeframes and short timeframes for time poor landowners to respond to applications by companies, who have fully paid, professional document preparers, readers, negotiators, solicitors and many more will clearly disadvantage some landowners.</p>	<p>The department notes the concerns expressed. The Bill maintains the status quo for timeframes for notification of mining lease and environmental authority applications.</p>
		68	Restricted land – Definition/application	<p>Some previously protected infrastructure such as bores etc have been removed from the restricted areas list. This restriction only applies to activities which are likely to cause surface disturbance and not likely to include noise, dust and</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>loss of amenity.</p> <p>The restricted land distance should be 600 metres and landowner's bores must be afforded a greater protection of 600 metres because of the high probability of damage from activities such as seismic explorations, blasting and fracking.</p> <p>A restrictive land distance of 50 metres should apply from property water infrastructure, stock yards and farm sheds.</p>	<p>that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p> <p>While the actual restricted land distance is proposed to be prescribed by regulation, consultation on a proposed distance of 200 metres from permanent buildings for exploration and production authorities was undertaken. If this was adopted, it would mean that a CCA for preliminary activities would no longer be required between 600 and 200 metres. Within 200 metres, owners and occupiers would have the right to give consent and any conditions, and in addition a CCA would be required for any advanced activities.</p> <p>Additionally, the resources Acts work in tandem with the <i>Environmental Protection Act 1994</i>, to ensure the appropriate environmental safeguards are in place to protect the environmental features of the land, including the potential impacts from dust and noise, etc.</p>
		68	Restricted land – Point when it applies	The granting of restricted land at the time of granting the original resource authority severely limits the optimisation and flexibility of businesses and future improvements.	<p>The grant of a resource authority was set as the point in time when restricted land applies to achieve some compromise between the existing frameworks this policy is intended to rationalise and to balance the interests of landholders with the proposed resource activity.</p> <p>Regardless of whether restricted land applies, the conduct and compensation agreement (CCA) framework has, and will continue to apply for advanced activities.</p>
		567	Legacy boreholes	<p>Shine Lawyers recently raised concerns in rural media about remediation activities affecting the process of negotiations for "make good" agreements. If this is simply a case of inadequate drafting we ask that it be clarified immediately. It should be made clear in legislation that if a bore that is considered "dangerous" is remediated and the bore is a bore used for, or capable of being used for primary production "make good" provisions, preferably a replacement bore, should be immediately implemented.</p> <p>Amendments proposed for the Petroleum & Gas Act by inserting clause 567, section 294B appear to allow anyone who is authorised by the Chief Executive to remediate any</p>	<p>The amendments are not intended to interfere with an operating water bore and any potential of current make good arrangements between a landholder and petroleum operator. The amendments deal with urgent matters of safety and have been drafted broadly to make sure boreholes with safety issues can be fixed, wherever the borehole is located, and regardless of whether the borehole type and owner is known.</p> <p>The legislation needs to be flexible to deal with many different circumstances and scenarios, for example, there are boreholes transferred to landholders to use for water but not yet converted to a water bore. In some cases it will not be known who the owner of the bore is (i.e. whether it is the landholder, resource company, or government).</p> <p>Chapter 3 of the <i>Water Act 2000</i> provides a make good framework for water bores</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>bore which is emitting gas without any provision for the rights of the landholder including notification and compensation. This appears to be in conflict with provisions in the Chapter 3 of the <i>Water Act 2000</i> and would lead to a loss of landholder rights.</p> <p>Recommend: Make good arrangements should be improved upon, not impeded, by provisions in this bill.</p>	<p>impacted by a petroleum tenure holder's exercise of their underground water rights. The amendments do not prevent negotiations for make good agreements which would otherwise be or are required under Chapter 3 of the <i>Water Act 2000</i>, or stop the application of existing agreements.</p> <p>It is also worth noting that make good measures such as the drilling of a replacement bore are only required if it has been determined that water level declines are due to the exercise of the petroleum tenure holder's underground water rights. Depending on the particular circumstances, other causes for water level decline, along with increased gas in a water bore, can include drought or other water extracting industries.</p>
202	Property Rights Australia	Bill as a whole	Important matters left to regulation	<p>Too many important provisions have been left to regulation. This creates a difficulty in writing a fully informed submission and creates a concern for the future as regulation can more easily be amended in comparison to legislation.</p> <p>Supporting regulation should be allowed public consultation as well as public submissions and hearing before the parliamentary committee.</p>	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact Statement (RIS) System that can require detailed cost-benefit analysis of proposed changes and detailed consultation. All regulations must be tabled in Parliament where a disallowance motion can be moved. While the regulations are reviewed and reported on by a Parliamentary Committee, they are not subject to public submissions or hearings.</p> <p>The Blueprint (available on DNRM website, p.22) for the strategy on how the department is to operate identifies as a key enabler of reform—the modernisation of our regulatory framework through making sure legislation is practical and easy to administer and removing prescriptive regulations to enable more flexibility for businesses, landholders and the community.</p>
		44	Land access - Deferral agreements	<p>These clauses offer little benefit or protection to the landholder and increases the risk of the landholder being taken advantage of.</p>	<p>This provision has been migrated across from the existing resources Acts and maintains the status quo.</p> <p>A deferral agreement allows the parties to postpone entering into a conduct and compensation agreement until a later date. Where a deferral is in effect, the resource authority holder may enter the land and undertake advanced activities.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		45	Land access - Right to elect to opt out	This clause offers little benefit or protection to the landholder and increases the risk of the landholder being taken advantage of.	<p>The department notes the concerns raised. However the opt-out agreement framework was recommended by the Land Access Implementation Committee (LAIC) Report, which resulted from a prolonged and extended period of review and consultation with peak agricultural and industry representatives. The opt-out agreement may be entered at the election of the landholder, which offers a level of protection against the landholder being taken advantage of.</p> <p>The department is committed to implementing the LAIC recommendations, including recommendation 4.2 which requires the development of a factsheet by the department to be provided to landholders prior to the execution of an opt-out agreement. This is designed to ensure landholders are aware of the implications and consequences of entering into such an agreement.</p>
		Bill as a whole	Non Prescriptive terms	The use of non-prescriptive terms, such as "reasonable" should be avoided for their ambiguity and opportune meaning. More precise definitions should be used.	The department thanks Property Rights Australia for their submission. The department considers that the use of these terms in the relevant clauses achieves the policy intent. These terms are widely used and accepted in the drafting of legislation to provide flexibility to accommodate the range of scenarios that may be captured.
		Bill as a whole	Consultation on the Bill	It is recommended that consultation, parliamentary committee deliberations and redrafting of this bill not be constrained by tight time frames. This is a highly complex bill, the start of a process where five resources acts will be migrated to a single Act. This bill will serve this State for many years in the future and as much time as needed should be allowed to get it right.	The department notes the views expressed by Property Rights Australia.
		Chapter 3	Land access	We recommend that no mining lease should be granted without Conduct and Compensation agreements in place. That includes no impact or low impact resource activity.	A compensation agreement must be in place before a mining lease is granted.
		N/A	Rehabilitation of resource authority area	PRA believes that at the conclusion of resource activity the land must be restored to its full productive capacity.	Rehabilitation of land subject to a resource activity is a requirement under the <i>Environmental Protection Act 1994</i> .
203	Mackay Conservation	418, 420 and 423	Notification and objections	Land Court one of the few instruments available to the public to have risks of projects more impartially evaluated than by a	The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs

Sub No.	Submitter Group	Clause	Section/initiative	Key Points	Departmental Response
	Group			<p>State Development Coordinator.</p> <p>Land use decision making processes for other industries provide for community submission and appeal rights so no good reason why mining tenure should be exempt from this basic standard.</p> <p>Bill would remove all existing public rights to lodge formal objections to the Land Court in up to 90% of mining projects in Queensland. Refers to Alpha Land Court decision.</p> <p>If objection rights are reduced to only the directly affected landowner there is no impartial party left to speak for broader environmental and community impact issues.</p> <p>If a landholder owns land outside of the resource authority but is affected by activities within the tenement by way of dust, noise, odour etc. Under the existing regime in the P & G Act an argument could be made that, provided it could be proven that a compensatable effect has been or will be suffered, the resource authority has a compensation liability to the landholder under section 532 of the P&G Act as they are in the "area of" the resource authority. However, by restricting the clause to apply to owners or occupiers who are only in the "authorised area" of the resource authority (i.e. the area which the resource authority relates to), such claims may be extinguished.</p> <p>A landowner who lacks the financial resources to object in the Land Court would be no better off under this bill than those outside the affected property and will also be disenfranchised.</p>	<p>for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		429	Restricted land – Mining Lease	Under clause 429 a landowner's home could be destroyed by an open cut mine.	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (Clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land prior to deciding any such mining lease application.</p>
		68	Restricted land – Infrastructure types	<p>The areas protected by the restricted land provisions are substantially less than those currently protected under the <i>Mineral Resources Act 1989</i>.</p> <p>Many of the areas which have been removed are essential to the operation of a farming business and to “do away” with them will place farmers and others at a significant disadvantage in what is already an imbalanced negotiation. It will no longer be a question of whether or not the landholder will be able to continue his operation or retain the piece of infrastructure, but rather, a question of compulsory acquisition and/or compensation.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
		Bill as a whole	Regulations	The use of regulations can be a means of ignoring sound legislative drafting techniques and good government. All of the items proposed to be left for regulations throughout the Bill are extremely important and should be given full legislative backing and opportunity for the public to make submissions.	<p>The approach taken in the Bill should be considered in the context of the existing resources Acts being very prescriptive. Highly prescriptive, rigid and detailed legislation is restrictive and does not allow the government to be responsive to the dynamic environment within which the resource industry operates. It is important to get this balance right to ensure crucial investment is not lost to other jurisdictions with simplified frameworks.</p> <p>Any new or changes to regulations are still subject to the Regulatory Impact</p>

					manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.
212	Origin Energy	3	Bill as a whole	Origin is supportive of the Bill and understands that the proposed amendments are designed to reduce unnecessary red tape for industry whilst maintaining a clear and streamlined regulatory environment.	The department thanks Origin Energy for their support for the proposed amendments.
		N/A	N/A	Support submission of APPEA.	The department notes Origin Energy's support for APPEA's submission.
		68	Restricted land – Definition	<p>The definition of 'restricted land' lacks clarity. Greater clarification is suggested, specifically with regard to:</p> <ul style="list-style-type: none"> • Whether restricted land will apply to a building or area which that was used at the time of grant of the tenement, but no longer in use; • Whether restricted land will apply to preliminary activities; • Whether restricted land arises where an activity is being conducted on land that is within the 'restricted land buffer' of the neighbouring property; • The definition of co-existence. 	<p>A building or area that is restricted land at the date the authority is granted will continue to be restricted land during the life of the authority. If the building or area is no longer in use, consent from the owner or occupier should be more readily available. This proposal seeks to give balance where buildings or areas constructed by the landholder post grant will not be restricted land.</p> <p>Where there is disagreement, the ability to apply to the Land Court for a declaration under clause 72 will be available.</p> <p>Subject to the exemptions in clause 67(b), the landholder has the right to give consent to any authorised activities within the restricted land distance, within the prescribed distance. Where consent is given, a conduct and compensation agreement (CCA) would be required for any advanced activities to be conducted within the restricted land area. A CCA, however, would not be required for preliminary activities anywhere on a property.</p> <p>Restricted land does apply to activities on neighbouring properties that would fall within the prescribed distance.</p> <p>It would be impractical to have a comprehensive list of buildings that cannot co-exist with authorised activities as this would depend on the circumstances of the case, e.g. nature of the business or purpose the building is used for, and the activities proposed and whether it can be easily relocated and cannot co-exist etc.</p> <p>Under the existing restricted land framework for the mineral and coal sector, all permanent buildings used for business purposes trigger restricted land. Notably under this Bill, this will not be the case. This aligns with an outcomes based framework that provides flexibility to deal with individual cases.</p> <p>The Explanatory Notes provide some examples of buildings for business purposes</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					that would likely generate restricted land including a veterinary practice or retail premises. Examples are also provided of buildings that would unlikely generate restricted land including a pump shed, hayshed, roadside stall or a building used for temporary accommodation.
		69 and 70	Restricted land – Who is a relevant owner or occupier	Origin notes that the term ‘occupier’ is a broad class of persons, the consent of which may be difficult to obtain, especially in regard to restricted land. Origin suggests requiring consent from an ‘owner’ only and removing the reference to ‘occupier’.	Occupiers have been included in the restricted land framework as it is not uncommon for family members to occupy other houses located on large properties as their primary residence that are owned by other family members without formal arrangements. Other occupiers would include tenants renting a house or a lessee of a business premises. A distance of 200 metres has been consulted on as a potential range for restricted land to apply. Any occupiers that have a right to occupy within such a relatively small distance should be readily identifiable in consultation with the owners.
		54	Land access – Notice to owners and occupiers	It is currently unclear whether s 513 of the <i>Petroleum and Gas (Production and Safety) Act 2004</i> applies to advanced activities only. Origin recommends clarifying this issue in the drafting.	This provision has been migrated across from the existing resources Acts and maintains the status quo. The provision requires a resource holder to provide a notice where the land has been entered to carry out authorised activities. Authorised activities are defined under the Bill as having the meaning given by the resources Acts, the relevant authority was granted under. Upon the commencement of the Bill, section 513 of the <i>Petroleum and Gas (Productions and Safety) Act 2004</i> will be repealed.
		80(4)(b)	Land access – Compensation for legal costs	In accordance with the requirements of the P & G Act, Origin currently compensates landowners for legal costs necessarily and reasonably incurred by the landowner in negotiating or preparing a conduct and compensation agreement. Origin suggests further consultation on this point to discuss the possible mechanisms to place rigor around the reasonableness and necessity test (as it is currently quite subjective).	Clause 80(4) provides a list of categories of effect that compensation may be claimed against. This provision has been migrated across from the existing resources Acts and maintains the status quo. The Land Access Implementation Committee (LAIC) was asked to review the heads of compensation to ensure no cost or erosion of landholder rights. An independent consultant was engaged to undertake a comprehensive analysis of the heads of compensation in Queensland, and the LAIC Report concluded that it would not be prudent to further legislate the heads of compensation at the current time due to the positive evolution of negotiating practice. The department is committed to implementing the LAIC Report recommendations, including advice regarding the current heads of compensation.
		86	Land access - ADR	Judicial commentary suggests that an ADR process may be forced upon one party by another. Origin suggests clarifying	Unresolved legal questions have arisen as a result of <i>Australia Pacific LNG Pty Ltd v Golden & Ors</i> [2013] QCA 366 regarding what occurs when a party does not

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				this section to avoid doubt that the process must be mutually agreed in writing.	agree to an ADR process as elected by the other party as per clause 86(2)(b) (which reflects the current resources Acts). The department is currently investigating potential solutions to provide clarification and if legislative amendment is required, will provide amendments in a future Bill.
		93	Land access – Successors in title	Further clarification is required to refer to 'successors in title' and 'opt out agreements' in regard to compensation not affected by a change in the resource authority holder. Origin recommends including successors in title in s 93(1)(c) and including opt-out agreements as well as CCAs.	<p>The department thanks Origin for identifying the inconsistency in the use of the term 'successors in title', which has resulted from migrating provisions across from the existing resources Acts under this Bill. The department will take this recommended change under consideration.</p> <p>Clause 93 specifies that conduct and compensation agreements, road compensation agreements, or specified decision of the Land Court are binding upon successors and assigns. This provision has been migrated from the existing resources Acts.</p> <p>The department is currently considering whether opt-out agreements should be included within clause 93 as binding on successors and assigns.</p>
		Chapter 4 and Chapter 7, part 4	Overlapping tenure – Bespoke agreements	The Bill does not explicitly allow for parties to negotiate bespoke agreements as an alternative to the legislative defaults. This ability was a fundamental principle of the White Paper and needs to be properly reflected.	The Bill as drafted does currently contain some flexibility for the parties to agree to arrangements that differ to that provided in the statutory framework. For example clause 114(2) provides the ability to agree to a mining commencement date that is different from the ones provided for in the relevant clauses of chapter 4 and chapter 7. However, the department is continuing to work with industry to ensure that the new overlapping tenure framework provides some flexibility for the parties to, in certain circumstances, enter into alternative arrangements to those established in the framework. The department is investigating options to make clearer that the parties may agree to alternative arrangements to those prescribed in the new overlapping tenure framework, except to the extent of certain prescribed aspects which are required for the State to discharge its custodian obligations.
		144 and 145	Overlapping tenure – Petroleum lease activity over an EPC/MDL	Origin supports that coal exploration parties should be allowed to conduct exploration activities within a petroleum lease if there are no adverse effects and subject to the directions from the PL holders safety officer. However there appears to be an error in the drafting which may limit a PL holder from conducting activities over a MDL or EPC unless there is no adverse effect to the coal party. This is not in line with the principles of the White Paper and could result in coal parties being able to prohibit activity on a granted production	The department notes Origin's comments that the Adverse Effects Test approach in Clause 145, so far as it applies to a PL, is inconsistent with the White Paper. The department is working to resolve the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				lease. Origin recommends removing the reference to a PL in column one of the Table for Part 3 in Section 144 and changing the requirement to reflect the principles in the White Paper.	
		231-233	Overlapping tenure – Surat Transitional Area	The Surat area was highlighted during the White Paper discussions because of its importance to the development of the CSG-LNG industry. The current Bill provides some certainty for CSG-LNG in the Surat but represents a significant compromise from CSG's original position in the White Paper, which was for the current existing regime to apply in that area.	<p>The department appreciates that the matter of transitional arrangements for the Surat Basin geographical area is a contentious issue for the resource industry. This is evident in the fact that the parties failed to reach an agreed position on the matter in the White Paper and turned to government to resolve this matter. These particular transitional arrangements reflect the advice given to industry via correspondence dated 26 November 2013.</p> <p>The department understands that QRC and APPEA are in the process of leading further discussions with industry on this particular matter and will be providing additional advice regarding possible amendments to this division of the Bill in the near future.</p>
		Chapter 4	Overlapping tenure – Grandfathering existing agreements/consent	Co-development agreements, coordination agreements and JDPs that cover ungranted Petroleum Lease and Mining Lease applications at commencement of this Bill and executed prior to commencement of this Bill need to be honoured. Further work is required to determine how existing Co-development agreements, coordination agreements and JDP's will work.	<p>The department notes Origin's concerns. The Bill is prospective, not retrospective and therefore will not impact on existing agreements between parties with granted tenures. Furthermore, it is important to note that the existing legislation does not recognise co-development agreements or joint developments plans.</p> <p>The requirement for a joint development plan is a new requirement for the overlapping tenure framework. These are intended to be a replacement for the current coordination arrangement and should reflect the information required by the State (to discharge its custodian obligations) that is included in any commercial agreement (whether default or bespoke) between the parties.</p> <p>The department thanks Origin for bringing the matter of existing coordination arrangements for ungranted MLAs and PLAs at the time of commencement. The department is working to resolve this matter.</p>
		221 and 222	Overlapping tenure - Existing Production Leases granted prior to commencement of this Bill need to retain their current rights	Sections 221 and 222 are meant to ensure that granted PLs and MLs that exist at the commencement of the new regime should not be subject to the new regime at all, and should continue to be governed by the old regime. This should be clearly stated in those sections, specifically, that new MLAs made from EPCs and MDLs over existing PLs and new PLAs that are made over existing MLs are to be dealt with under	The department notes Origin's comments and is working to clarify the matter.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				the old provisions.	
		Chapter 4	Overlapping tenure - Outcomes of the statutory requirements of the previous Acts need to be retained	Origin queries whether an ATP or EPC and MDL holders who did not comply with the threshold requirements to seek a preference decision (ie did not lodge three month notices) should receive any benefit that may apply under the new regime or whether such applications should proceed under the old provision.	The department notes Origin's concerns. However, this scenario was not considered in the White Paper. The department's interpretation would be that the new overlapping tenure framework would apply, as written in the Bill.
		Chapter 4	Overlapping tenure – Concurrent applications	Addressing concurrent applications for Petroleum and Mineral Leases (PL/ML) requires further clarification. Origin will continue working with industry and government to develop a balanced outcome between petroleum and coal interests.	The department notes Origin's comment regarding concurrent applications. The department understands that APPEA and the QRC are coordinating discussions with industry on this particular matter and will be providing additional advice to the department regarding possible amendments.
		126(4)	Overlapping tenure – IMA/RMA	Section 126(4) of the Bill allows the ML holder to occupy and IMA or RMA for an indefinite period to carry out rehabilitation. This occupancy could result in the PL/ATP holder being unable to enter the area to carry out activities until the rehabilitation is completed. A drop dead date for the ML holder to abandon an IMA or RMA should be stated.	The department notes Origin's concerns with the clause. However, the proposed legislative amendments in the Bill have been developed to meet the agreed position as provided in the White Paper, which does not provide for a statutory abandonment date.
		131	Overlapping tenure - Petroleum Lease activity outside IMA/RMA/SOZ	The White Paper Principles contemplated that a PL holder would be free to carry out its activities in the balance of the PL/ML overlap area outside the IMA, RMA and SOZ, but the ML holder would have the "right of way" inside the IMA and RMA and the SOZ would be subject to safety and health arrangements. Section 131 of the Bill does not make this distinction and should be amended to align with the White Paper.	The provisions in question have no impact on the agreed industry position that the PL holder may undertake authorised activities outside the area of the IMA, RMA or SOZ (safety and health obligations applying). Section 131(2) does not affect the right of an ATP or PL holder to continue to carry out authorised activities for the petroleum resource authority under their work program or development plan. Only once the agreed joint development plan is in place (i.e. agreed to and lodged under section 127 which identifies the IMA/RMA/SOZ) is the ATP or PL holder obligated to comply with the agreed joint development plan under section 131(2).
		Chapter 9, part 3 – division 3 part 4 –	Legacy boreholes	Origin has indicated to Government that work still remains in relation to a number of unresolved issues and Origin welcomes the opportunity to continue to engage about these	The department notes the submission and acknowledges further work to be done on funding and revision of the Protocol.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7		outstanding issues.	
213	Bruce and Wendy Derrick	Refer to Table 3			
214	Ms Joanna Kesteven	Refer to Table 3			
215	W.R. Easton & C.A. Bettridge	Refer to Table 3			
216	Ms Cherie Dunshea	Refer to Table 3			
217	Arrow Energy	N/A	N/A	Arrow is supportive of the APPEA submission on the Bill.	The department notes Arrow Energy's support of APPEA's submission.
		90	Land access – Particular agreements to be recorded on titles	Some conduct and compensation agreements (CCA) can be for low impact activities and for short periods of time. Requiring CCA's for low impact activities for short periods of time to be updated with the Titles registry will add administrative burden as these could be frequent occurrences. A potential solution is to exclude low impact activities or activities that occur within a short timeframe for example 6 months or by tenure type.	The department notes the concerns and recommendation raised by Arrow Energy. The purpose of the Land Access Implementation Committee (LAIC) recommendations requiring relevant agreements to be noted on title was to ensure that a prospective purchaser of a property is made aware that they exist and can investigate the terms and conditions that may apply to them as a future owner. This recommendation was developed by peak agricultural and industry representatives sitting on the LAIC, and originated due to stakeholder concerns about the potential for a property to change hands without a purchaser's knowledge that an agreement exists. To deliver certainty to prospective purchasers and give full effect to the LAIC recommendation, all relevant agreements will need to be noted upon title to eliminate this risk.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		127 and 131	Overlapping tenure – Joint Development Plan	<p>A potential solution is for the legislation to be clarified in section 131, so that the absence of an agreed JDP will not prevent a PL holder from continuing authorised activities that pre-existed ML grant in the overlapping area.</p>	<p>The department notes Arrow Energy's concern regarding an agreed joint development.</p> <p>The provisions in question have no impact on the agreed industry position that the PL holder may undertake authorised activities outside the area of the IMA, RMA or SOZ (safety and health obligations applying).</p> <p>Section 131(2) does not affect the right of an ATP or PL holder to continue to carry out authorised activities for the petroleum resource authority under their work program or development plan.</p> <p>Only once the agreed joint development plan is in place (i.e. agreed to and lodged under section 127 which identifies the IMA/RMA/SOZ) is the ATP or PL holder obligated to comply with the agreed joint development plan under section 131(2).</p>
		149	Overlapping tenure – Information disclosure	<p>Section 149(2)(b)(i) allows a recipient to disclose information to another person if "the disclosure is to a person (a secondary recipient) whom the recipient has authorised to carry out authorised activities for the recipient's resource authority". This provision is too restrictive in that it doesn't cover a recipient disclosing information to a related body corporate, shareholders, consultants and advisors who may require the information but aren't directly involved in carrying out an authorised activity. For example, the provision of information related to an ICSG offer to an external law firm engaged to draft the ICSG supply contract.</p> <p>A potential solution is to extend section 149(2)(b)(i) to permit disclose to a related body corporate, shareholders, consultants and advisors if related to the carrying out of authorised activities.</p>	<p>The department notes Arrow's concern and is investigating options to resolve the matter.</p>
		Chapter 4	Overlapping tenure - Incidental coal seam gas	<p>The industry White Paper which was the basis for this part of the legislation accepts that the basic property rights to gas resides with the holder of the petroleum tenement, and that in return for agreeing to a right of way for coal mining, there should be a well-defined compensatory right for the petroleum tenement holder to take any ICSG produced by the ML holder.</p>	<p>The department notes Arrow's comments. The department will continue to work closely with Arrow and other key external stakeholders during the development of the regulation to ensure it reflects the intent of the White Paper and remains relevant.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>In essence, that is a right to take gas that the petroleum tenement holder could otherwise have produced themselves for the right of way for coal mining.</p> <p>Of fundamental importance to this trade-off is a requirement that the ICSG be produced by the ML holder in a form aligned with the requirements of the petroleum tenement holder, and then offered on terms that could be reasonably be accepted (a "valid offer"). It follows that the ML holder's right to commercialise ICSG should only arise when a valid offer has been rejected and further, that compensation liabilities are offset only when a valid offer has been rejected.</p> <p>The production and offer requirements for ICSG therefore have a flow-on effect from Division 4 of the Bill dealing with ICSG to Division 3 dealing with compensation and dispute resolution, and to the MRA amendments dealing with the commercialisation of ICSG. It is therefore important that the requirements for ICSG production in overlaps and for an offer of the ICSG to be valid are clearly enshrined in the legislation itself.</p> <p>A potential solution could be for the Regulations to stipulate that the contract for the delivery of ICSG include;</p> <ol style="list-style-type: none"> a. a delivery point where the petroleum resource holder can sensibly take the gas; b. arrangements for industry standard metering and regular reporting c. a contribution to the direct reasonable costs incurred by the ML (coal) holder in making the accepted incidental coal seam gas available at the delivery point d. obligations to forward plan together to foster investment certainty and minimise impacts to each other's activities resulting from amended development plans e. an obligation on the ML (coal) holder to provide, 	

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				<p>at a minimum, annual updates to expected gas quality and quantities; and</p> <p>f. provisions to ensure compliance with Part 4 Division 1 concerning information exchange.</p> <p>A potential solution regarding a valid offer and re-offer for ICSG is for Regulations to include:</p> <p>a. the ML (coal) holders mine plan(s) and associated degassing plan</p> <p>b. the degassing plan's schedule including details of the timing of when gas wells will commence production of incidental coal seam gas</p> <p>c. a description of the degassing methods and the measures that will be taken to avoid contamination and dilution</p> <p>d. gas reservoir modelling that underpins the degassing plan</p> <p>e. mapping identifying degassing wells, pipelines, associated infrastructure and the proposed delivery point; and</p> <p>f. details of the expected quality and quantities of incidental coal seam gas for each 6 month period of forecasted production.</p>	
218	Agforce	68	Restricted land – Definition/application	<p>Concerned that landholders rights in the area of resource activity on their property should not be reduced, and that the highest level of landholder rights avail. The removal of principal stockyard, bore or artesian well, dam and artificial water storage is cause for concern, and the removal of the 600 metre rule reduces opportunities for landholders to negotiate with resource companies about activities occurring within 600 metres of the homestead.</p>	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					While the actual restricted land distance is proposed to be prescribed by regulation, consultation on a proposed distance of 200 metres for exploration and production authorities was undertaken. If this was adopted, it would mean that a CCA for preliminary activities would no longer be required between 600 and 200 metres. Within 200 metres, owners and occupiers would have the right to give consent and any conditions, and in addition a CCA would be required for any advanced activities.
		45	Land access – Opt-out agreements	Support the Ministers recommendations via this Bill but note that the opt out clause in relation to signing a CCA must come with stringent processes whereby landholders are fully informed of what rights they are waiving.	The department thanks AgForce for their support of the proposed provisions resulting from the Land Access Implementation Committee Report. An opt-out agreement is invalid if it fails to comply with the prescribed requirements, which will reflect the Land Access Implementation Committee Report recommendations 4.1 – 4.5. This will include the requirement that the landholder has been provided with an opt-out factsheet (developed by DNRM) about the significance of opting out of entering a formal conduct and compensation agreement.
		Common Provisions Act	MQRA Program	While Agforce certainly supports processes which simplify complex legislation across different but similar frameworks the concern is that at no point should this reduce landholder's rights in the area of resource activity on their property. If there is to be a commonality it should be based on whatever is the highest level of landholder rights available in whichever current Acts. Changes should not be watered down to the point whereby there is no practical outcomes for landholders.	The department considers that the amendments in the Bill achieve the objectives of the MQRA Program. An example of this is the adoption of the restricted land framework across all resource authorities. For the first time, landholders affected by future applications by the petroleum and gas sector will have a right to say no to most resource activities within close proximity to their homes.
		Chapter 4 and Chapter 7, part 4	Overlapping tenure	Currently many producers have overlapping tenures which leads to confusion and excess time managing outcomes with competing resource companies. A more streamlined tenure process may limit stress on landholders where uncertainty prevails about when and how tenure holders will implement their activities.	The department thanks AgForce for their comments and notes the views expressed.
		Chapter 9	Small scale alluvial miners	Exemptions should be handled carefully to ensure landholders are still fully informed of potential activities on	It is assumed that Agforce is commenting on the provisions in the Bill providing for alternatives to physical marking the boundaries of a mining lease or claim. In all instances landholders will be advised of applications for mining claims and leases.

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
				their land.	The requirement for any methodology for marking the boundary is that the boundary be clear and unambiguous and capable of being realised on the ground.
		Chapter 9, part 3 – division 3 part 4 – division 6 part 5 – division 6 part 7 – division 7 part 9 – division 6 part 10 – division 7	Legacy boreholes	Legacy boreholes is an issue that AgForce members have been concerned about for some time. Given complexity of liability and old tenure holders versus new it is imperative that some clarity be provided in legislation to enable responsible action on fixing these boreholes. AgForce would welcome changes that improve the ability for the Department of Natural Resources and Mines to authorise remediation of these boreholes on a more consistent, urgent basis.	The department notes the submission and confirms that the proposed amendments do go some way to provide clarity that tenure holders are not liable for legacy boreholes; and that where legacy boreholes present a safety concern there would be provision for the State to authorise remediation.
		420	Notification and objections - Reduction in public notifications	The development of large resource projects often impacts on neighbouring properties as well as the directly impacted landholders. While the current system has allowed for particular interest groups objection rights (when they may not necessarily be impacted but have philosophical objections) the removal of these notifications will mean landholders in the vicinity who often have legitimate concerns will not be aware of what is about to occur with a particular mining lease that could impact on them.	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>through an Environmental Impact Statement. The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available. As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		423 and 424	Notification and objections – Land Court issues	It is vital that landholders directly affecting by a mining lease can have unresolved matters of importance dealt with by an authority capable of providing an outcome. The discussion paper is not clear about the possible replacement of some of the Land Court functions. While certainly the current system is an expensive proposition for landholders in terms of resolving disputes any replacement system needs to be accessible, affordable and capable of providing resolution for serious issues.	<p>The current function of the Land Court is not being replaced. Landholders directly affected by the proposed mining lease will still have access to the land court in regard to matters concerning the mining lease including the extent, type, purpose, intensity, timing and location of operations, the current and prospective uses of the land; and whether the proposed operation conforms with sound land use management. The refinement of matters which can be objected to the Land Court reflects modern drafting style, ensures that environmental matters are considered under the <i>environmental protection Act 1994</i> rather than being appealable under two separate jurisdictions and removes unnecessarily broad and ill-defined grounds such as in the public interest or if a good reason has been shown.</p> <p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary overlap in jurisdiction and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>own and manage to object to the Land Court in regard to those direct impacts under the Mineral Resources Act 1989.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the Mineral Resources Act 1989 to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Mining Minister must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been excluded from the Court's consideration..</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
219	Fiona Hayward	420	Notification and objections – Affected	Concerned that only "directly affected persons" will be able to object to Mining Lease applications. In our present situation, an open-cut mine extension is proposed on land	The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
			persons	adjacent to our property. If the Bill becomes legislation we are concerned that we will not have objection rights to the MLA, even though the mine will be less than 2km from our homestead, sheds, and cattle yards.	<p>for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
		68	Restricted land – Infrastructure types	Concerned at the proposed definitions of "Restricted Land" in the Bill. We believe these changes have the potential to affect landholders throughout Qld who have to deal with resource companies, as at present we are at least able to claim some measure of protection for our stockyards, worksheds, and water supplies such as dams, bores & turkey-nests, etc. But the Bill does not appear to recognise these areas of agricultural infrastructure. Concerned as to what this will mean in future negotiations with resource companies.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure. Potential impacts on stockyards, bores, artesian wells, dams and other artificial water storages connected to a water supply are already managed under the conduct and compensation agreement (CCA) framework for petroleum and gas sectors. The proposed changes ensure that this approach is consistent across all resource sectors.</p> <p>The conduct and compensation agreement framework provides a mechanism to manage potential impacts on these infrastructure types as a range of potential solutions exist to ensure appropriate conduct and compensation.</p>
220	Ms Nicole Read	Refer to Table 3			
221	Ms Veronica Baas	Refer to Table 3			
222	Ian William Scholer	68	Restricted land – Definition/application	Objects to proposal to allow mining companies to lease land and carry out mining activities that may be within earshot of residential premises.	<p>The intent of the restricted land framework is to provide certainty for landholders near their homes and other critical infrastructure.</p> <p>Currently a conduct and compensation agreement (CCA) is required for any activity within 600 metres of a school or occupied residence (600 metre rule). Preliminary activities outside 600 metres do not require a CCA. Preliminary activities involve walking, driving along an existing road or track, taking soil or water samples, geophysical surveys not needing site preparation, some types of minimal impact surveys and survey pegging.</p> <p>Anything else is an advanced activity which includes drilling, clearing, road construction and seismic surveying using explosives. Any advanced activity requires a CCA.</p> <p>Under the changes proposed by the Bill, a CCA would not be required for preliminary activities anywhere on a property. However, within the restricted land distance, the landholder has the right to give consent to most activities being undertaken within that distance.</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the <i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
		239-266	Notification and objections – Site-specific environmental authorities	Mr Richardson opposes limiting the right to make a submission on (and appeal against) an environmental authority (EA) application to site-specific projects only also puts the interest of big business who can buy lobbying services above those of the voter.	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the Environmental Protection Regulation 2008. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>
		423 and 424	Notification and objections – Land Court considerations	Mr Richardson opposes restricting the matters which the Land Court can consider for a ML objection can corrupt the outcome. All decisions should be made with the best possible information.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court's jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the</p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court's consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act 1994</i> in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
		246	Notification and objections – EIS under <i>State Development and Public Works Organisation Act 1971</i>	Mr Richardson opposes removing the requirement to re-notify an EA application when an environmental impact statement has been conducted under the <i>State Development and Public Works Organisation Act 1971</i> (Qld) falls into the same category as above.	<p>An EIS for a coordinated project under the <i>State Development and Public Works Organisation Act 1971</i> (SDPWO Act) includes assessment of significant environmental effects. Last year, the Coordinator General published a generic Preparing an environmental impact statement Guideline for proponents which states that:</p> <p>"The objective of the EIS is to ensure that all potential environmental, social and economic impacts of the project are identified and assessed; and that adverse impacts are avoided, minimised or sufficiently mitigated. Direct, indirect and cumulative impacts must be fully examined and addressed. The project should be based on sound environmental protection and management criteria."</p> <p>Consequently, it is the Queensland Government's view that requiring additional notification of the environmental authority application is unnecessary duplication of process.</p>
266	Ms Ada Medak	Refer to Table 3			
267	Sandy Lumley	Refer to Table 3			
268	Ms Linda Welch	Refer to Table 3			
269	Mr Graham			Mr Graham Ambrey opposes the changes to the notification	The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of

273	Robin Anderson	420	Notification and objections	<p>All people must have the right to object to mining leases. How many mines do we need? Can we have a limit on the holes we make in the ground?</p>	<p>The policy intent of the notification and objection reforms is to provide for a notification and objection process that reflects the level of risk and scale of operations and that removes duplication, reduces project delays and lowers costs for industry in general.</p> <p>The department considers that this clause achieves the intended policy intent. The department is of the view that mining lease applications which require a standard or variation application for an environmental authority will not have fundamental impacts on communities. The eligibility criteria for such applications include: numbers of employees; area of disturbance; and locational considerations, etc. As such, the risk of offsite issues from such applications is considered to be low and therefore a reduced notification regime is proposed in the Bill.</p> <p>While there will no longer be a right for citizens, including landholders, community members, community groups and organisations, etc., to object to low risk mining leases, the public right to object has been retained for any application requiring a site-specific application for an environmental authority.</p> <p>The evidence is that these are the applications that the community is concerned about and which potentially have social, economic and environmental impacts beyond the boundary of the proposed lease. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act</i> or through an Environmental Impact Statement.</p> <p>The type of mine that requires a site-specific environmental authority generally includes all large scale mining projects, including all coal mining proposals.</p> <p>The majority of mining leases in Queensland carry low environmental risk, and as such, a standard or variation application for an environmental authority will apply.</p> <p>The Bill also proposes that notification of mining lease applications under the</p>

					<p><i>Mineral Resources Act 1989</i> is required for directly impacted landowners, occupiers, infrastructure providers and local governments. Landowners and local governments that are directly impacted will continue to be able to lodge an objection to the Land Court on matters that relate to the mining lease application.</p> <p>The cumulative quantitative and qualitative benefits of the model proposed have been considered against the current regulatory burden and have been determined to provide the greatest net benefit of the options available.</p> <p>As such the department is of the view that the proposed legislation achieves a balanced approach to notification and objections between industry, and individual landholder and community interests.</p>
274	Ms Margaret Andersen	Refer to Table 3			
275	Ms Linda O'Gorman	239-266	Notification and objections - Site-specific environmental authorities	Ms O'Gorman disagrees with limiting the right to make a submission on (and appeal against) an environmental authority (EA) application to site-specific projects only.	<p>The change to the <i>Environmental Protection Act 1994</i> reflects that the environmental authority application process has different levels of assessment according to the level of potential environmental risk associated with the environmentally relevant activity proposed. A 'low risk' mine is determined by the ability of the operator to meet eligibility criteria which are currently contained in schedule 3A of the Environmental Protection Regulation 2008. These criteria provide a clear definition of when a mine can make a standard or variation application.</p> <p>Where the environmentally relevant activity for a mining project does not meet the eligibility criteria, a site-specific application will be required for the environmental authority. For these mining projects, notification and objection rights are preserved under the <i>Environmental Protection Act 1994</i> or through an Environmental Impact Statement under either the <i>Environmental Protection Act 1994</i> or the <i>State Development and Public Works Organisation Act 1971</i>. Generally, these site-specific applications for an environmental authority will be required for all large scale mining projects, including all coal mining proposals. This will mean that environmental authorities for mines which may have environmental impacts on people some distance from a proposed mine, such as coal mines, will always be publicly notified.</p> <p>Standing for notifications and appeals under the <i>Environmental Protection Act 1994</i> has not been changed.</p>

					balanced approach to notification and objections between industry, and individual landholder and community interests.
		423	Notification and objections – Land Court considerations	Ms O’Gorman disagrees with restricting the matters which the Land Court can consider for a ML objection.	<p>The intent of the package of reforms is to appropriately balance the right to object on matters that directly relate to the granting of tenure, whilst reducing regulatory burden and delays by minimising unnecessary jurisdictional overlap and providing more specific and tenure related grounds on which objections can be lodged.</p> <p>The Bill proposes to adopt a risk based approach to notification and objections by providing for those persons directly impacted by the issuing of a mining lease on their rights to use and enjoy the land they own or lease or the services that they own and manage to object to the Land Court in regard to those direct impacts under the <i>Mineral Resources Act 1989</i>.</p> <p>The breadth of the matters the Land Court can currently consider increases the complexity of the process, and has led to objections being lodged that are beyond the scope of the <i>Mineral Resources Act 1989</i> to condition. This, in turn, increases the cost to the applicant and the community.</p> <p>The review of the role of the Land Court identified that some considerations needed to be redrafted for modern drafting style; some should be omitted as they were more appropriately considered under another jurisdiction or by the Minister without the advice of the Court or should be omitted as they were unnecessarily broad and vague.</p> <p>The review also identified that additional considerations were required by the Land Court to ensure they could adequately deal with objections from local government and owners of the land over which access to a proposed mine is required. These have been added to the Court’s jurisdiction.</p> <p>The changes in the Bill clearly identify the jurisdiction of the Land Court to ensure that the issues considered by the Court relate directly to the impacts of the tenure on those directly impacted by the proposed mining lease application. For those considerations that will no longer require consideration by the Court, the Minister for Mining must still have regard to those considerations when deciding whether to grant the lease. As the Land Court provides recommendations to the Minister and is not a decision-maker there is no change to the existing situation where it is the Minister that decides whether the proposed mine will proceed having regard for those considerations that have been removed from the Court’s consideration.</p> <p>Additional rights to object are provided under the <i>Environmental Protection Act</i></p>

Sub No.	Submitter	Clause	Section/initiative	Key Points	Departmental Response
					<p>1994 in regard to environmental impacts for site-specific applications for an environmental authority under which any individual or member of the community or community group on behalf of the community or sections of the community may object.</p> <p>As such the proposed legislation does seek to achieve a balance between individual and community interests.</p>
		246	Notification and objections – EIS under <i>State Development and Public Works Organisation Act 1971</i>	Ms O’Gorman disagrees with removing the requirement to re-notify an EA application when an environmental impact statement has been conducted under the <i>State Development and Public Works Organisation Act 1971</i> (Qld).	<p>An EIS for a coordinated project under the <i>State Development and Public Works Organisation Act 1971</i> (SDPWO Act) includes assessment of significant environmental effects. Last year, the Coordinator General published a generic Preparing an environmental impact statement Guideline for proponents which states that:</p> <p>“The objective of the EIS is to ensure that all potential environmental, social and economic impacts of the project are identified and assessed; and that adverse impacts are avoided, minimised or sufficiently mitigated. Direct, indirect and cumulative impacts must be fully examined and addressed. The project should be based on sound environmental protection and management criteria.”</p> <p>Consequently, it is the Queensland Government’s view that requiring additional notification of the environmental authority application is unnecessary duplication of process.</p>
		429	Restricted land	Ms O’Gorman disagrees with removing restricted land status in situations where a miner is granted exclusive surface rights to access land (for example, open cut mines).	<p>The purpose of the changes in restricted land for situations such as open cut mines result from the fact that there are clearly some situations where mining and residential uses cannot coexist.</p> <p>It is not intended that the landholder will remain within the locality of the mine in the event that the Minister for Natural Resources and Mines is of the view that the mine should be approved with full surface rights and be expected to coexist without any restricted land.</p> <p>Rather in such situations restricted land would be extinguished and the landholder would be compensated for not only the loss of the right of consent but also to relocate from their existing residence.</p> <p>This is a significant change to the existing situation and in recognition of this, the Bill (Clause 424 amending section 271 of the <i>Mineral Resources Act 1989</i>) includes a requirement for the Minister to have particular regard for any disadvantage that may result to the owner or occupier of the area of restricted land</p>
