To whom it may concern

Considering the high vaccination rates and the mildness of the omnicron variant, is it not time to stop the restrictions, discrimination and fear mongering? Why is the Queensland government considering extending their powers of emergency? I am very concerned by the prospect of the Queensland Chief Health Officer being granted an extension of these broad sweeping powers. All the evidence suggests that the emergency is over. The vaccination mandates are unlawful and it is time for the government to step back and allow people to take back their freedoms and live peacefully enjoying the dignity that comes with being part of the human race. It should never be the governments job to force performance and to coerce people into medical treatment they do not want. Each Individual has the right to bodily autonomy and it is NOT the governments responsibility to make sure everyone is healthy. (Banning smoking would be a good place to start)

The Queensland Government's response to the covid situation has already wrecked havoc upon the state of Queensland. I believe the emergency powers should under no circumstances be extended and I would appreciate your support in this matter. I repeat: The emergency is over!

Thank you for taking the time to consider my submission.

Yours sincerely  
Tracey Steele
