

Submission on Public Health and Other Legislation (Extension of Expiring Provisions) Amendment Bill 2022

This Bill should not be progressed for the following reasons:

1. The current mRNA vaccines have been publicly acknowledged by their manufacturers to be ineffective against Omicron. So there is now no point in continuing the current vaccination program.
2. Scientific study reported in the Lancet on 29 October 2021 has confirmed that banning the unvaccinated from contact with the vaccinated is unwarranted on health grounds. It found:
 - a. Vaccination reduces the risk of delta variant infection and accelerates viral clearance. Nonetheless, fully vaccinated individuals with breakthrough infections have peak viral load similar to unvaccinated cases and can efficiently transmit infection in household settings, including to fully vaccinated contacts.

3. The initial vaccine mandates were based on the presumption that the vaccines would prevent the vaccinated from catching the disease – which is now known to be false.
4. Medical study and insurance claim data continues to come in showing an alarming jump in all-cause mortality world-wide since the vaccines have been introduced. The pandemic is now a problem of the vaccinated rather than the unvaccinated. See [b46d3b 1e1ae35612b74e98ac07ab8a7896da07.pdf](https://peopleforsafevaccines.org/b46d3b1e1ae35612b74e98ac07ab8a7896da07.pdf) (peopleforsafevaccines.org). See also ABS data <https://www.abs.gov.au/articles/covid-19-mortality-australia> showing that the number who have died from COVID without any other comorbidities is very low – 8.6% of the total with and of COVID.
5. For logistical reasons alone, RNA vaccines cannot possibly ever stop a pandemic that has already started, as demonstrated by the following blog.
<https://medicocapture.blogspot.com/2022/02/this-blog-examinesstrategic-management.html> By the time the DNA has been sequenced, a new vaccine produced, distributed and administered to the whole world, the virus has mutated, and the vaccine designed for its genetic code will no longer be effective.

This all indicates that all vaccine mandates should cease, and there is now no need for the emergency powers. Extending them will just continue policies that are now known to be inappropriate and harmful. Progressing this Bill would perpetuate the unnecessarily divisive vaccine mandate that we now know has been based on many false premises. The statement in the Bill's explanatory notes that "there is no alternative method of achieving the policy objective" is clearly incorrect. The policy objectives themselves are based on false premises.

So it is most important that the Bill not be progressed or passed so that the divisive transgression into personal civil liberties can be quietly ended. Furthermore, to avoid the obvious accusation of blatant confirmation bias, the vaccination prerequisite requirement for attendance at your public hearings must be dropped.

Dr Stephen McGrath
