To the committee

I write this submission to outline the reasons that we don't need an extension to this pervasion.

The stress that people are going through in hospitals with the under staffing. I had to take my partner into hospital on the 2/3 to be checked out after blacking out with dangerously low blood pressure. I wasn't allowed to be with her in her time of need. They were under staffed and so took hours before attending to the problem. All because they think there's a pandemic out there that's not even killing half a percent of the population. I want our freedom back and so does my low blood pressure partner. The stress is getting to us all.

Holding the line
