Subject: Urgent disapproval of Emergency Bill Extension
Date: Thursday, 3 March 2022 9:21:05 PM

Dear Committee Members

I strongly disagree/Object to an extension of the State of Emergency Bill.

The prevalence of the Omicron virus is now negligent

The death rate from Omicron or the Covid 19 virus is declining for the general population

The original emergency bill was founded on false data

Current estimates indicate that Omicron deaths are only a small fraction of that false data

The potential for continued discrimination via these emergency powers is unacceptable to any democratic society.

The negatives of these mandates and the pressure it is placing on Queenslanders through lost jobs and a pressured health care system, along with the now state of emergency flooding along the east coast, is more reason to let the people of Queensland show each other the empathy and community deserved, instead of the mandate discrimination that has been the focus of the last months.

Many Queenslanders have had covid 19 and have recovered, with or without the vaccination and we are ready to move on. According to the Government modelling the virus peaks have now passed.

The current data analysis is showing that the efficacy of the vaccines wane over as little as months and more data is being realised, that the vaccine injuries outweigh the benefits of being vaccinated.
