To whom it may concern,

I do not support an increase to the state of emergency in Queensland.

There is no on going state of emergency, the case numbers have been manipulated to increase fear and lie to the public about cases!

The PCR test was never designed to test for viruses as the inventor explained before his death. He said that the maximum cycles should be 27 yet the Queensland government have been running 40-45 cycles, you can get a positive result from anything at that many cycles!

This is crippling the economy and costing jobs all for a virus that has not yet been isolated and is proving less deadly than the common cold!

Please stop the on going state of Emergency with immediate affect and let us try and recover from the debt and damage it has caused!

Regards David Gregory
