Subject: Objection to extend the pandemic mandate due to not proportionate medical risk/ benefit factors
Date: Friday, 4 March 2022 11:32:48 AM

Dear Premier of Queensland and Health Minister

I strongly object to the extension of measures and restrictions to the public of the so called 'medical emergency' as the medical evidence has shown over the last 24 month - worldwide- that the risk of recovering from COVID is 98,5% and there is effective treatment available to prevent hospitalisation and death. The 'benefit' of the current vaccines have proven to create more adverse effects, like blood clotting, myocarditis, strokes and long term injuries like Autism.

The efficacy to prevent infection to the public has also proven negative. Therefore the risk of Vaccination Mandates, Mask wearing, social distancing and Lockdowns have proven to have a 0.2% effect on preventing any spread of virus and the death toll has been the same as 2017 and 2018, 2019 with the 'common flu', if not less!

Therefore the risk/benefit factor is negligible to justify any further extension of these 'measures'! They are obsolete. I am asking you to say NO to any further extension of the existing mandate!

Let's all get the economy going again and improve the Healthcare for vulnerable people by paying qualified nurses and Healthcare professionals including paramedics also carers a decent wage, as they are the Frontline workers, as they are dedicated to protect the community!

Thank you and Best Regards

Monika Nieswandt
