Submission Against

PUBLIC HEALTH AND OTHER LEGISLATION (EXTENSION OF EXPIRING PROVISIONS) AMENDMENT BILL 2022

It has been overwhelmingly apparent that the current emergency powers have been abused beyond logical common sense.

The data coming forth from international studies and the transparency from hospital administrative data regarding covid deaths and hospital admission numbers also shows that the entire emergency provisions have been unnecessary and unwarranted and have caused more damage to public health (and economy) than they did any good.

Studies also show that an official political government institution is widely unnecessary for society to function productively and efficiently, let alone the need for any emergency powers or extra governing restrictions or restrictive measures.

There's multiple studies that can be shown that supports dismissing any emergency powers that have been implemented or are intended to be implemented. If you require this information I'd be more than able to supply it and in depth.

Kindest regards always
Lance Carleton
