Dear Sir/Madam

I am writing to you requesting that the above bill be denied due to:

1. lack of scientific data and evidence to support that we are still in the midst of a Pandemic now that Omicron has shown to be highly infectious but less virulent and affects the Upper Respiratory Tract with a low mortality rate unlike previous strains which affected the Lower Respiratory tract causing a higher mortality rate.
2. The ongoing segregation of society that these powers allow at a whim of the Qld govt to discriminate between the Vaccinated and Unvaccinated and the devastation to local businesses because of work and business mandates.
3. Latest release of Pfizer documents showing the long list of adverse reactions to the vaccine in the trial phase that were purposely hidden from the world which led to our government believing they were safe and effective and enforcing mandates under the guise of the SOE. It would be a criminal act against the Qld people by our govt to enforce any vaccine mandates for work and businesses knowing this information. Please see below Pfizer document (AVR's on page 8-9)

4. I am fortunate enough that I have a home based business and have been able to work throughout the pandemic but part of my business has also suffered as I also do events in the community and due to mandating businesses and venues this discriminates against my clients and contacts because of their vaccination status which limits my opportunities in the local business space.

I implore you to think carefully about your decision around extending this bill as we as a state and country cannot emotionally and financially keep on tolerating ongoing restrictions at the whim of our govt for a virus that has been downgraded to being similar to a bad cold.

Yours sincerely

Cheyne Reilly
