Committee Secretary Economics and Governance Committee Parliament House George Street Brisbane Qld 4000

I am writing to oppose the implementation and extension of the –

Public Health and Other Legislation (Further Extension of Expiring Provisions) Amendment Bill 2022

Until Oct 2022

For the following reasons:

- The Minister for Health Yvette D'arth says she will end the Public Health Emergency Powers when she sees fit. Ms D'arth is a lawyer and not a health professional and should not be making any decisions on the part of the people in the area of Health. Your advisers are also yes people to the WHO agenda. 'If when I am satisfied that the temporary covid 19 legislation powers are no longer necessary to prevent or minimise serious adverse effects on human health I am required to end the declared Public Health Emergency under the Public Health Act.' Yvette D'arth Health Minister Qld. How is MS D'arth going to determine this?
- Where is the criteria on which she bases her decision to end an emergency. She is predicting more covid variants and low and behold the influenza will return this year. Where does she get her scientific data from. The Doherty and Burnett institutes modelling has been never been shown to be correct and is used to scare the public into further emergency measures. https://www.doherty.edu.au/uploads/content_doc/DohertyModelling_NationalPlan_and_A_ddendum_20210810.pdf
- There are no resources/ research listed in the Doherty Institute modelling document???? What are they basing their information on????
- Since the beginning of the so called pandemic restrictions, many people have suffered from separation from families, loss of work, business collapse due the uneducated whims of the chief health officer and premier. Only today all schools have been closed in SE Qld because the Premier thought we might have a storm.
- Queensland Citizens are adults and vote the government in the Health Minister and Chief Health Officer's job is to make sure that the state is healthy and has access to health care not to rule our lives.
- Since the beginning of the Vaccine roll out the demand on the ambulance services and hospitals has increased many fold. This has not been from covid and so one has to ask, is it the vaccine adverse reactions. This is what paramedics, doctor and nurses are telling me and is supported by bureau of statistics data overseas data. There is also a shortage of health staff because of ludicrous vaccine mandates. Health care has significantly declined in the past 2 years and many brilliant doctors and nurses have resigned because of health care discrimination and mandates.

- The vaccine has been an experiment on Australian citizens with no positive effect in curbing the elusive Covid 19. You would never give one drug to every person with a disease as there are always contraindications. There is also no follow up for those who have been injured. Everyone has been forced to keep quiet under you so called emergency act to make the government look like they are saving people from a disease that is no worse than the common cold.
- Apartheid measures with unvaccinated people being limited in places they can go are worse than racism and sexism as they restrict people's access to proper health care and to visit family members in care and interstate.
- **Misuse of Police** unnecessary patrols of borders, stopping people accessing family, work and basic supplies is a total waste of the skills of our police force. Forcing people to follow totally unfounded rules like mask wearing when standing but not sitting. Being able to stand next to someone on the border but not cross is ludicrous.
- The money that has been wasted on police, unreliable testing, PPE gear, vaccinations that are untested and obviously do not work.
- **The businesses that have suffered** immeasurably and cannot plan for the future if there is another extension of this **draconian bill**.
- **Waste/Rubbish** created by testing continuously, mask wearing (so unhygienic never disposed of correctly), the vaccine vials, the stickers and signs for every business, QR code signs which have proved useless.
- Not to mention all of the changes businesses have to make to keep up with government flip flopping.
- The Government should be addressing improving the health of Qld citizens by way of education about nutrition, physical exercise, sunshine and positive mental health practices.
- Improving hospital and medical systems by supporting medical staff to help people change their lifestyle and reduce susceptibility to illness.
- Protect the vulnerable with as little impact on the rest of society

The Committee should be addressing all of the issues listed above and below otherwise you are not doing their due diligence and committing the Queensland people physical, mental and economic ill health for decades to come. Lock downs – extension of emergency powers from 7 to 90 days.

- There is no strict measure or number as to how many cases warrants a state health emergency and this appears to have changed throughout the pandemic according to how much fear needs to be generated in the public. There is no evidence that a few cases will spread throughout the community and most people have no or very mild symptoms. This doesn't warrant further lock ups. These emergency powers are subject to the decision of a Chief Health Officer who is advised by Epidemiologists from University Institutes funded by pharmaceutical companies and the Gates Foundation. Truly independent advice needs to be sought.
- There is No evidence that shutting areas/States down for any length of time reduces the 'curve' this Curve is a Doherty Institute term not a reality)– predictions seemed to be based on academic, epidemiologist's algorithms rather than educated doctor's real experience. Sweden, Florida (high numbers of elderly) and Texas have not had shutdowns and have returned to normal life.
- Shutting down the state, or part there of again, will destroy businesses, families, lives, education, educational institutions and the cohesion of society. It will also increase domestic violence, self-harm, mental illness and suicide.
- **Extending the lock down powers to October 2022** with the ability to extend it further to 2024 is a complete overreach of government powers and is not needed now the strains are less potent. This is about control rather than health.
- **Christmas and summer** were unnecessarily destroyed for many people who couldn't see families and had to wear germ incubating masks in the most humid summer we have had in Qld. This is not only cruel but hygienically and ethically abominable. This has created a state of tiredness in the community and mental fragility.

Health effects of lock down measures on the population according to Australian Government funded website.

https://www.healthdirect.gov.au/blog/ways-covid-19-is-affecting-australians-health

New Variants potentially more dangerous is not founded in scientific evidence.

- There is no evidence that the Delta variant is more deadly than earlier variants. Viruses generally weaken over time even if they are slightly more infectious.
- The new strains are about 2% different to original strain and therefore many people are now resistant to covid and will therefore have resistance to variants.
- It has been stated that Sars Cov-2 is 20% different from Sars Cov-1 and yet 17 years later individuals who had contracted Sars Co-1 were immune to Sars Cov-2.
- Covid 19 is a version of Sars Cov-, 2 and the variants, according to Michael Yeadon Former Chief Pfizer Scientist, vary only by a difference of 2%.
- Omicron has proved to be a very mild disease especially in the unvaccinated and was brought into Queensland by the vaccinated when the borders opened one would assume, unless other measures have been unleashed on our society to invoke a virus like response. Toxic chemicals released into the air can cause viral like symptoms

Unreliable Tests therefore Emergency Powers are declared without substantial evidence:

- Scientists have deemed PCR tests are not reliable and if run at 37+ amplifications have 90% false positive results. No society should be shut down on the back of an unreliable test that is not fit for purpose.
- Under the Commonwealth Biosecurity Act, Section 60 and 61, a person cannot be detained unless they have signs and symptoms of a disease. PCR testing is not an adequate measure of viral load if the person does not have visible, detectable signs and symptoms.
- Section 354 Qld Health Act as soon as possible after detention the person must be examined or tested to prove they have Covid-19.
- This means that the test must be accurate and there is no chance of a false positive test. Reverse Transferase PCR testing is not fit for purpose and according to the developer should not be used as a diagnostic test.
- **Rapid Antigen Test** are totally unreliable and to quote John Skerrit from the TGA it can only determine that someone has an antigen but can not accurately determine the virus he said that if everyone around a person who has a positive PCR test for Covid then it is likely that that person will have Covid. **Not very scientific**

<u>https://www.lifesitenews.com/news/evidence-emerges-that-covid-tests-are-faulty-fda-and-cdc-admit-as-much</u> PCR tests

Lock downs are not necessary as proven treatments are available and are Detrimental to Citizens.

- American and Italian Doctors have developed medicine protocols to prevent, treat and cure Covid-19, using drugs including Ivermectin, Hydroxychloroquine, Doxycycline etc with impressive results.
- Many worldwide studies both, peer reviewed and clinical prove that these drugs are effective.
- The health actions have been largely limited to locking down free individuals and democratic communities and there has been no information given to doctors or the public on the use of diet, nutrients, fresh air and sunlight (Vit D) as preventatives.
- Stifling information on treatments and banning medicines (hydroxychloroquine), has occurred with no supportive medical reasoning apart from fraudulent Lancet articles which were subsequently withdrawn. See link.

https://www.thelancet.com/journals/lancet/article/PIIS0140-6736(20)31180-6/fulltext

- In fact, this repression of information on treatment of Covid 19 and the voices of qualified medical professionals has probably been instrumental in increasing suffering and even death during this pandemic. It is up to a qualified doctor to prescribe appropriate treatment and medication for individuals, and not up to the Chief Health Officer to ban safe and proven medications for 6 months without any valid scientific evidence.
- The Omicron variant for which very few people have been tested genomically, has proved to be very mild especially in the unvaccinated. I have seen more people ill with Omicron who have been double and triple vaccinated than those who are vaccinated. Studies show that the vaccine progressively reduces people's immunity. The more vaccines the less immunity for any disease.
- There has been misleading Information from the FDA in US and from the TGA / Australian Government discrediting Ivermectin when it has been in use for many years with little or no side effects (short or long term) and it is inexpensive and out of Patent.
- John Skerrit from the TGA said in the Senate estimates committee, in May 2021, when questioned by Qld Senator Malcolm Roberts they had not recommended Ivermectin because no one had put it forward to them to review in the context of Covid-19.
- It would seem appropriate to me that if there was a chance that Ivermectin could prevent or treat Covid 19 it should be investigated by the TGA before Experimental Vaccines are released on the public.
- I would also suggest that both State and Federal governments are in breach of TGA rules when they advertise specific brands of a vaccine to the public, given that doctors have been warned about promoting Ivermectin (which is a generic drug), online.

False info from FDA and Australian government follows them. <u>https://covid19criticalcare.com/wp-content/uploads/2021/03/FLCCC-Alliance-</u> <u>Statement-on-Misleading-FDA-Guidance-on-Ivermectin-March7-2021.pdf</u> False info from FDA and Australian government

Over reaction of Chief Health officer and Minister to a manageable disease:

- The action of the government is similar to methods used by the Mafia we will look after you if you do as you are told – go to forced quarantine and pay or stay home, don't work, wear masks and get injected with an experimental provisional untested vaccine or mRNA genetic engineering which has never been used on humans before and we will let you out of your home.
- The previous chief health officer has already overstepped her position by restricting new parents from being with their newborn and people have not been able to visit dying family members or attend funerals.
- If the minister of health and chief health officer are given more power to restrict movement of individuals within the state and to and from other states it will cause major trauma to individuals, families, businesses and even the economy. Mental and physical illness can result from fear, inability to access medical treatment and separation from family and support networks.
- Only a few older or people with existing medical conditions are at risk and very few have died. 88 people die per day in Qld and we have had 570 deaths from Covid in the last 2 years and nearly all were elderly and had comorbidities.
- From that I would conclude that it is not a deadly disease. In fact nearly 1000 less people died in 2020 In Qld than in 2019.
- More people die from influenza each year than have died from covid.
- The current CHO John Gerard has had limited experience in this administrative roll and appears to just say whatever the government want him to say. He opened the borders as Omicron was supposedly going to over run the state and has since said that his actions saved us from a huge number of hospitalisations This is pure supposition and more truth can be expected from fortune tellers.

Lock down for the purpose of coercing the public to get vaccinated:

- Over 750 people have died in Australia after receiving a Covid vaccine according to the TGA
- Older and ill people are being subject to untested vaccines when it is known that immune compromised people have more side effects than well people.
- According to information from the TGA vaccine submissions for Astra Zeneca and Pfizer drugs they have not been tested on people over the age of 65 or in combination with other medications.
- These provisional vaccines are illegal if other treatments are available.
- Under federal law individuals cannot be coerced or forced to have a medical procedure or vaccine without fully informed consent. This means that all individuals need to have all of the risks and the fact that the drug is experimental explained ton them before they receive it.
- Are all Queenslanders fully aware that there is no indemnity for Vaccine producers and insurance companies may not pay medical costs if they sign informed consent for an experiment?
- Now that the Government say 95% of the population has been doubled vaccinated and many boosted with more boosters to come, What happens if there are long term side effects to this drug that has not been tested for long term effects? Are the Minister for Health and CHO going to take responsibility for the future health of these people. See Pfizer adverse reaction document below.
- 20. https://phmpt.org/wp-content/uploads/2021/11/5.3.6-postmarketing-experience.pdf

Privacy – the collecting and sharing of private information is a breach of the constitutional rights of all Australians:

- Tracking individuals with Qld ap and QR codes goes against Human rights as it is commodifying human beings.
- Sharing of Data collected under the guise of tracking Covid cases goes against the Federal **Privacy Law 94h.**
- There is no information in the proposed Bill that states where this information will be shared and for what purposes. The powers of the state seem to be increasing as the rights of the individual are diminished for a cold virus.
- According to Australian federal law Individuals do not have to carry a mobile phone with them and therefore applying QR codes to humans is not mandatory.

Video Conferencing

- This is obviously to keep society going while in long lock down and may have some advantages, but this may allow governments to lock down communities with greater restrictions for longer and without valid reasons.
- Family court, Legal matters and issuing of government orders this may take the power away from the individual as face to face contact with members of a court and counsel is essential for a fair trial or decision. Video conferencing should be limited in its application.
- Doctors and Specialist appointments by tele health methods may be helpful but they are not a replacement for in clinic examinations and consultations. Numerous health conditions can be missed or miss diagnosed in this way and some could be life threatening. i.e Cancers, Heart conditions and now reactions to Experimental vaccines – Myocarditis in young men, miscarriages and severe uterine bleeding in women, neurological problems such as Bell's Palsy and blind ness have been reported in the US with Pfizer and Moderna.
- These measures will put public and individuals at risk and do nothing for general health of individuals or the community.

Payment of Quarantine Fees

- Mandatory quarantine based on unreliable testing should not incur a payment from the interned citizen. This is a government requirement not a personal choice. Home quarantine wherever possible is better for the physical and mental health of individuals.
- According to the Bio Security Act of the Commonwealth of Australia a bio security or human bio security officer only can enforce testing and quarantine on an Australian Citizen and the cost is of detainment is paid for by the government.

In conclusion I do not agree with the proposed extension to the Public Health and Other Legislation Bill amendments as they will not reduce be advantageous in the long run as people will be locked up and not exposed to any seasonal viruses which will mean that their immune systems will not be familiar with current variants of all types of viruses and bacteria and they could be more susceptible increased the prevalence of resistant bacterial strains. Resistance to disease comes from some exposure, not lock downs and isolation. I wrote this last sentence in 2021 and now the Health minister is suggest due to our lack of exposure to people Influenza will be back again this year. The science/story changes according to the Governments need to control the population. A psychic has more credibility than the Government Health Team who is supposed to be managing this emergency.

Lock downs will destroy our society on many levels and as representatives of the Queensland public you need to be very mindful of implementing anything that will further undermine personal and public health as well as the economy and individual freedoms. In a time of cyber hacking individuals and organizations are more at risk if all of personal information is recorded on Apps and Video conferencing. There needs to be serious consideration of individual, medical and business privacy.

The Lock downs may also be brought in during the Federal election and the emergency powers will all for elections online which is undeniably open to corruption

I trust you will take the above into consideration and consult with experienced and qualified medical doctors and scientists before implementing these very severe restrictions in a so-called democratic state that does not have an upper house to protect the people from overreaching control.

These overreaching Emergency powers are destroying more lives than they are saving. These powers should not be given to any Government for more than 7 days straight and never to an inexperienced public servant in the CHO whose whims will be passed with a signature from the past CHO in the position of Governor.

Yours Sincerely

Name Hendrik Verbruggen
