Subject: 2.5 particulate matter in hard rock quarries, Send in your submissions.
Date: Monday, 29 May 2017 6:38:24 PM

Dear committee members,

We speak on behalf of hundreds if not thousands of Australians who live in close proximity to Hard rock quarries, Hard rock quarries should be included in your report as Particulate matter 2.5 from grey wacky and hard rock quarries can give people Silicosis, and chronic lung disease It is very susceptible in young children and can affect them all their lives. A quarry at Mt Cotton Which has recently been given the go ahead has 55 properties surrounding it and a lot of young Families with young children live close by, it is also a mile from a primary school with 650 pupils. Several thousand people also within the dust area in Mt Cotton Village. The nearest property is Just 200 meters from the pit and there is no way that the operator can stop 2.5 particulate matter

Entering their home and lungs. I therefore ask that any decisions you make should include hard rock

Quarries and that air particulate counters to capture particulate matter 2.5 be placed at the boundaries

Of people's homes.

We await a reply from the committee.

Kind Regards Luke and Jean DGLISH
