## Education (General Provisions) and other legislation Amendment Bill 2024

Dear Committee,

I **object** that the Australian curriculum will **have** to be taught in home schools.

One of the reasons families are home schooling their children is because they don't want to follow the Australian curriculum. We don't want to follow the Australian curriculum because so many people in schools are falling below the minimum standard. Home schooling helps children work at the level that they are at, no matter age. This helps children get ahead and learn the way that is easier for them to learn. So many children have different learning styles and school can't take into an account all of them so that is why home school has such a great affect on the children that are enrolled in home schooling.

If the home schooling is changed to be forced to follow the Australian curriculum, children will not be able to work with their own unique learning style. If children are working with the Australian curriculum, and failing which is happening so much, children will grow up not knowing how to live their life and failing in school often leads to failing in life.

For these reasons, I state that home schooling should stay the same and not be changed to the Australian curriculum being taught in home schooling.

Thanks for reading my submission.
