Subject: Submission for extension of State of Emergency bill
Date: Thursday, 1 July 2021 10:07:11 PM

To whom this may concern,

My name is Yasmin Jade Turner and I am sending this submission in response to the proposal of extending the state of emergency to April 2022.

I strongly disagree with this bill all together.

It would appear that more and more people are suffering from adverse affects from the vaccine as opposed to the virus.

I thought the whole point of this was to keep people safe?

It was originally said that this virus is only a real threat to the elderly and people with compromised immune systems.

Statics you have provided back up this claim, so why does EVERYONE need to be vaccinated against a disease that mainly affects the elderly and people with certain conditions?

Majority of people in this group (who have chosen to) have been vaccinated. The vaccine also dose not stop anyone getting COVID nor does it stop the spread so why are we putting EVERYONE else at risk with a vaccination we have little data on, a vaccination that is causing more problems in healthy people then COVID itself?

Australia is supposed to be the lucky country, you cannot keep people from freely travelling interstate and threaten people with their jobs to take a vaccine that seems to cause more harm then the virus itself.

It was an absolute coincidence that there was an apprent "spike" in the COVID cases just before the state of state of emergency was about to end but NOT before the state of origin where 50,000 people were allowed to gather to watch the money making sport. Though of course lets blame it all on 6 unvaccinated people who had a "party". Why are you labelling them "un-vaccinated" when we all know that being vaccinated makes NO DIFFERRNCE, you can still get COVID, you can still pass it on - then it should be up to the person to take the risk and take the vaccine and it should not make any difference as to how you label them.

From the statistics on the government webaite 910 deaths in total for Australia - 910 deaths, I am no math whiz though in contrast to the population of Australia the percentage would be tiny. I don't see a pandemic in this number at all. If this virus is as deadly as its supposed to be I dont see it - I have seen people close together, you let all the sporting events run without a problem, 910 deaths since Dec 2019, I would expect more from a virus so deadly and so contaigous.

I would be more worried about cancer or heart disease.

I have lost all faith and trust in the Australian government and police force.

People who have died with COVID are said to have died as a direct result of it dismissing the fact that the person had chronic underlying problems though healthy people that die or have a adverse reaction days or weeks after the vaccine are all said that it wasnt the vaccine - This doesnt add up. I have also recently read that in the UK pilots have been forced to get the vaccine whilst the public have been warned against flying after the vaccine due to blood clots and 4 pilots died in one week.

FOUR.IN.ONE.WEEK why shouldn't this raise alarm bells? I should specify, 4 vaccinated pilots and you apprenly want to protect people from COVID - if you CARE about PROTECTING people, start by pulling the pin on the risky vaccine, or at the very least stop pushing it. You say its our choice and yet you are telling employers they can threaten employees with their jobs, travelling interstate and overseas, attending events e.c.t.

You say it is safe though NO ONE is willing to stand behind these vaccines. No one is willing to take responsibilty or liability or offer financial support to people who are dying or suffering adverse reactions WHY? If it is so safe then why? Makes no sense. There is NO TRUST, peoples safety is clearly not your priority because we shouldnt have to chose between our health (what we know if best for our selves) and our jobs/livelihoods/lifestyles.

From
Yasmin Turner
