

Committee Secretary
Economics and Governance Committee
Parliament House
George Street
Brisbane Qld 4000

I am writing to oppose the implementation of the –

**Public Health and Other Legislation (Further Extension of
Expiring Provisions) Amendment Bill 2021**

For the following reasons:

Lock downs – extension of emergency powers from 7 to 90 days.

- There is no strict measure or number as to how many cases warrants a state health emergency and this appears to have changed throughout the pandemic according to how much fear needs to be generated in the public. There is no evidence that a few cases will spread throughout the community and most people have no or very mild symptoms. This doesn't warrant further lock ups. These emergency powers are subject to the decision of a Chief Health Officer who is advised by Epidemiologists from University Institutes funded by pharmaceutical companies and the Gates Foundation. Truly independent advice needs to be sought.
- There is No evidence that shutting areas/States down for any length of time reduces the 'curve' – predictions seemed to be based on academic, epidemiologist's algorithms rather than educated doctor's real experience. Sweden, Florida (high numbers of elderly) and Texas have not had shutdowns and have returned to normal life.
- ***Shutting down the state, or part there of again, will destroy businesses, families, lives, education, educational institutions and the cohesion of society. It will also increase domestic violence, self-harm, mental illness and suicide.***
- Extending the lock down powers to 90 days is unnecessary and a complete overreach of government powers and is not needed now the strains are less potent. This is about control rather than health.

Health effects of lock down measures on the population according to Australian Government funded website.

<https://www.healthdirect.gov.au/blog/ways-covid-19-is-affecting-australians-health>

New Variants potentially more dangerous is not founded in scientific evidence.

- There is no evidence that the Delta variant is more deadly than earlier variants. Viruses generally weaken over time even if they are slightly more infectious.
- The new strains are about 2% different to original strain and therefore many people are now resistant to covid and will therefore have resistance to variants.
- Sars Cov-2 is 20% different from Sars Cov-1 and yet 17 years later individuals who had contracted Sars Co-1 were immune to Sars Cov-2.
- Covid 19 is a version of Sars Cov-,2 and the variants, according to Michael Yeadon – Former Chief Pfizer Scientist, vary only by a difference of 2%.

Unreliable Tests therefore Emergency Powers are declared without substantial evidence:

- Scientists have deemed PCR tests are not reliable and if run at 37+ amplifications have 90% false positive results. No society should be shut down on the back of an unreliable test that is not fit for purpose.
- Under the Commonwealth Biosecurity Act, Section 60 and 61, a person cannot be detained unless they have signs and symptoms of a disease. PCR testing is not an adequate measure of viral load if the person does not have visible, detectable signs and symptoms.
- Section 354 Qld Health Act – as soon as possible after detention the person must be examined or tested to prove they have Covid-19.
- This means that the test must be accurate and there is no chance of a false positive test. Reverse Transferase PCR testing is not fit for purpose and according to the developer should not be used as a diagnostic test.

Lock downs are not necessary as proven treatments are available.

- American and Italian Doctors have developed medicine protocols to prevent, treat and cure Covid-19, using drugs including Ivermectin, Hydroxychloroquine, Doxycycline with impressive results.
- Many worldwide studies both, peer reviewed and clinical prove that these drugs are effective.
- The health actions have been largely limited to locking down free individuals and democratic communities and there has been no information given to doctors or the public on the use of diet, nutrients, fresh air and sunlight (Vit D) as preventatives.
- Stifling information on treatments and banning medicines (hydroxychloroquine), has occurred with no supportive medical reasoning apart from fraudulent Lancet articles which were subsequently withdrawn. See link.

[https://www.thelancet.com/journals/lancet/article/PIIS0140-6736\(20\)31180-6/fulltext](https://www.thelancet.com/journals/lancet/article/PIIS0140-6736(20)31180-6/fulltext)

- In fact, this repression of information on treatment of Covid 19 and the voices of qualified medical professionals has probably been instrumental in increasing suffering and even death during this pandemic. It is up to a qualified doctor to prescribe appropriate treatment and medication for individuals, and not up to the Chief Health Officer to ban safe and proven medications for 6 months without any valid scientific evidence.
- **There has been misleading Information from the FDA in US and from the TGA / Australian Government discrediting Ivermectin, when it has been in use for many years with little or no side effects (short or long term) and it is inexpensive and out of Patent.**
- John Skeritt from the TGA said in the Senate estimates committee, in May 2021, when questioned by Qld Senator Malcolm Roberts they had not recommended Ivermectin because no one had put it forward to them to review in the context of Covid-19.
- It would seem appropriate to me that if there was a chance that Ivermectin could prevent or treat Covid 19 it should be investigated by the TGA before Experimental Vaccines are released on the public.
- I would also suggest that both State and Federal governments are in breach of TGA rules when they advertise specific brands of a vaccine to the public, given that doctors have been warned about promoting Ivermectin (which is a generic drug), online.

False info from FDA and Australian government follows them.

<https://covid19criticalcare.com/wp-content/uploads/2021/03/FLCCC-Alliance-Statement-on-Misleading-FDA-Guidance-on-Ivermectin-March7-2021.pdf> False info from FDA and Australian government

Over reaction of Chief Health officer and Minister to a manageable disease:

- The action of the government is similar to methods used by the Mafia – we will look after you if you do as you are told – go to forced quarantine and pay or stay home, don't work, wear masks and get injected with an experimental provisional untested vaccine or mRNA genetic engineering which has never been used on humans before and we will let you out of your home.

Page 3.

- The chief health officer has already over stepped her position by restricting new parents from being with their newborn and people have not been able to visit dying family members or attend funerals.
- If the minister of health and chief health officer are given more power to restrict movement of individuals within the state and to and from other states it will cause major trauma to individuals, families, businesses and even the economy. Mental and physical illness can result from fear, inability to access medical treatment and separation from family and support networks.
- Only a few older or people with existing medical conditions are at risk and very few have died. 430 people die each day in Australia from various causes 910 died in 18 months from covid many of whom were ill and in nursing homes. There have been reports from my clients families in Victoria saying that their loved ones did not die of Covid but it was declared a Covid death. 88 people die per day in Qld and we have had 7 deaths from Covid in the last 18 months. From that I would conclude that it is not a deadly disease. In fact nearly 1000 less people died in 2020 In Qld than in 2019.
- More people die from influenza each year than have died from covid.

Lock down for the purpose of coercing the public to get vaccinated:

- 330 people have died in Australia after receiving a Covid vaccine according to the TGA
- Older and ill people are being subject to untested vaccines when it is known that immune compromised people have more side effects than well people.
- According to information from the TGA vaccine submissions for Astra Zeneca and Pfizer drugs they have not been tested on people over the age of 65 or in combination with other medications.
- These provisional vaccines are illegal if other treatments are available.
- Under federal law individuals cannot be coerced or forced to have a medical procedure or vaccine without fully informed consent. This means that all individuals need to have all of the risks and the fact that the drug is experimental explained to them before they receive it.
- Are all Queenslanders fully aware that there is no indemnity for Vaccine producers and insurance companies may not pay medical costs if they sign informed consent for an experiment?

Privacy – the collecting and sharing of private information is a breach of the constitutional rights of all Australians:

- Tracking individuals with Qld app and QR codes goes against Human rights as it is commodifying human beings.
- Sharing of Data collected under the guise of tracking Covid cases goes against the Federal **Privacy Law 94h**.
- There is no information in the proposed Bill that states where this information will be shared and for what purposes. The powers of the state seem to be increasing as the rights of the individual are diminished for a cold virus.

- According to Australian federal law Individuals do not have to carry a mobile phone with them and therefore applying QR codes to humans is not mandatory.

Video Conferencing

- This is obviously to keep society going while in long lock down and may have some advantages, but this may allow governments to lock down communities with greater restrictions for longer and without valid reasons.
- Family court, Legal matters and issuing of government orders – this may take the power away from the individual as face to face contact with members of a court and counsel is essential for a fair trial or decision. Video conferencing should be limited in its application.
- Doctors and Specialist appointments by tele health methods may be helpful but they are not a replacement for in clinic examinations and consultations. Numerous health conditions can be missed or miss diagnosed in this way and some could be life threatening. i.e Cancers, Heart conditions and now reactions to Experimental vaccines – Myocarditis in young men, miscarriages and severe uterine bleeding in women, neurological problems such as Bell's Palsy and blind ness have been reported in the US with Pfizer and Moderna.
- These measures will put public and individuals at risk and do nothing for general health of individuals or the community.

Payment of Quarantine Fees

- Mandatory quarantine based on unreliable testing should not incur a payment from the interned citizen. This is a government requirement not a personal choice. Home quarantine wherever possible is better for the physical and mental health of individuals.

In conclusion I do not agree with the proposed extension to the Public Health and Other Legislation Bill amendments as they will not reduce be advantageous in the long run as people will be locked up and not exposed to any seasonal viruses which will mean that their immune systems will not be familiar with current variants of all types of viruses and bacteria and they could be more susceptible increased the prevalence of resistant bacterial strains. Resistance to disease comes from some exposure, not lock downs and isolation.

Lock downs will destroy our society on many levels and as representatives of the Queensland public you need to be very mindful of implementing anything that will further undermine personal and public health as well as the economy and individual freedoms. In a time of cyber hacking individuals and organizations are more at risk if all of personal information is recorded on Apps and Video conferencing. There needs to be serious consideration of individual, medical and business privacy.

I trust you will take the above into consideration and consult with experienced and qualified medical doctors and scientists before implementing these very severe restrictions in a democratic state.

Yours Sincerely

Alison Verbruggen
