To whom it may concern.

Re: **Public Health and Other Legislation (Further Extension of Expiring Provisions)
Amendment Bill 2021**

I am totally against any further extension of this legislation, because it is based on a lie, as there is no Covid-19 pandemic in this country, and there never has been. This disease has been far less deadly than previous flu epidemics in Australia. Furthermore, deaths have occurred mostly in older people with serious underlying health issues.

This legislation is all about the government controlling us, disrupting our lives and destroying businesses, in order to convince people to take a dangerous and unnecessary vaccine which has not been properly tested. If the government were truly interested in protecting our health, they would not have banned proven treatments like Ivermectin and Hydroxychloroquine.

As a 91 year old who grew up in Nazi Germany, and came to Australia for a better life, I am truly dismayed about what is happening in this country. We seem to be following the modus operandi of the Chinese Communist Party in removing citizens' rights and freedoms, using technological surveillance such as check-in apps.

Furthermore, we are engaging in medical experimentation on a scale that makes the Nazis seem like amateurs. There is now overwhelming evidence from overseas that these vaccines are causing carnage, including deaths and serious life-altering injuries, in many young people who would have easily survived a case of Covid. And it is becoming clear that soon children will be targeted with these shots, even though they have almost no risk from the disease. In years to come, this will be seen as 'The Holocaust' all over again – except it is being unleashed on the whole population of the world.

Instead of pushing this nefarious agenda, the Queensland government should be standing up for the truth and Queenslanders' rights, and immediately rescind the current 'state of emergency' legislation, rather than extending it further. They should also rescind the draconian check-in app requirements.

Werner Schmidlin
