

To Queensland Parliamentarians,

I am writing to you to voice my concerns about the proposed Public Health and Other Legislation (Further Extension of Expiring Provisions) Amendment Bill 2021.

I am greatly concerned about the erosion of our privacy and freedoms outlined in this bill. Whilst many countries worldwide are opening up, Queensland and Australia in general seem to be going backwards and enforcing more restrictions. This appears to be a knee-jerk reaction based on media sensationalism and not on facts.

The matter of mandatory vaccinations with a vaccine that has so many dreadful side effects is unconscionable. It should be mandatory for all of you to talk to people who have suffered from these side effects. And I would like to know why parliamentarians are not researching the alternative therapeutics like Ivermectin which has been in use for many years, is safe and cheap and can be used both as a prophylactic and a treatment for covid. This peer reviewed research paper shows that "Ivermectin treatment was associated with lower mortality during treatment of COVID-19, especially in patients with severe pulmonary involvement" (<https://pubmed.ncbi.nlm.nih.gov/33065103/>). And there are many more studies confirming the same thing. In addition many doctors in the USA and other countries have successfully treated patients with Ivermectin and or hydroxychloroquine but their voices are silenced by Big Tech and their research scrubbed from the internet - <https://richardsonpost.com/nick-corbishley/21988/ivermectin-cures-covid-but-shhh-dont-tell-anyone/>. You have to ask the question, Why?

Masks don't work,. You know it and I know it. In fact they can cause fungal problems in the lungs and other issues. Lockdowns are destroying our economy and the only ones benefiting are the big department stores and conglomerates. While you're trying to save grandma and grandpa from dying of covid, you are contributing to healthy adults suiciding because of money problems, children suffering physical abuse because their parents are stressed from losing their jobs, small business owners going bankrupt.

In a civilised society there should be room for debate. But unfortunately media, big tech and big Pharma seem to be the only ones that you politicians listen to. Which is a shame because they all have a vested interest in making sure their solution is the only one that can be found. The "truth" often requires a lot more digging around to find.

If you are really prepared to represent all Queenslanders then please end the lockdowns and the mask mandates, give us our God given freedom to make our own decisions and choose whether we want an experimental vaccine or not. And please, throw this bill in the rubbish where it belongs.

Yours sincerely

Carolyn McPherson
