To Whom it may concern,

Response to the Public Health Act amendments

This bill does not reflect the citizen's rights and enforces rules that are draconian and do not reflect the science. There are a multitude of reasons why these emergency powers should not be allowed to continue

- 20 1. Firstly, this emergency response should not be extended as we now had COVID under control and the only reason we have outbreak is the mishandling of Quarantine. If the government would put decent measures in place in these quarantine facilities, then we would not have a problem. Instead, the facilities are not properly managed and the staff has no training nor experience of the concept of quarantine, of the virus and its transmission and the general procedures of preventing outbreaks.

If I would run my laboratory like this all my staff would be sick. So instead of emergency powers, fix up your quarantine facilities. Get some proper managers. You have doctors and scientist highly trained in running such facilities, hire some proper managers.

- 30 2. In my opinion as a senior research scientist, the Chief Health officer makes decision that are not based on science and therefore should not be in the position to have even more powers. The government has now asked for interest from overseas for people to replace the Chief Health officer. You mean you will give a person from overseas the most power in the state. This position should go to an Australian with Australian citizenship and not somebody from overseas. This is a person none of us have voted in, yet he or she will have the most power in the state.

40 The powers have been inappropriately used, with exceptions such as allowing mass gathering and then enforcing a lock down two days later when the virus has already escaped due to the mass gathering. You now had to quarantine thousands of people and probably many more due to the mass gathering.

3. The government are now wanting to share confidential information. Confidential information should not be shared unless people have volunteered to share the information and should not be done without consent of the person. You are violating the privacy act.

4. There should be no border restriction, quarantine is there to lock sick people away not the healthy population. In the history of pandemics and we have never locked healthy people away, we have locked away the sick people.

5. There should definitely not be an extension in time to declare a public health emergency, it ruins our economy, it worsens the mental health of people and increases our domestic violence.

6. The clause that the City of Brisbane Act 2010 and Local Government Act 2009 to support the financial sustainability of local governments during the COVID-19 public health emergency by allowing local governments to decide, by resolution at a meeting other than a budget meeting, what rates and charges are to be levied for the 2021-22 financial year is contradictory to supporting the population that is suffering at a great expense due to unnecessary lockdowns causing financial hardship for thousand of people. Rates and charges should not be increased during a period when the population is suffering financial distress. On the contrary rates and charges should be kept at the same rate.

7. There should be no extending of the additional COVID-19 legislative measures established under the COVID-19 Emergency Response Act 2020, as we have this disease under control.

8. There needs to be some overhaul on the handling of quarantine, which has been badly managed. If you want to close borders, it would be useful to close our international borders, at least until quarantine is sorted. We are an island and that has saved us from more substantial outbreaks, but this status needs to be maintained with quarantine measures that are properly established and maintained.

9. The excuse for this emergency power is that we will roll out the vaccine. But we heard that the vaccine does not protect transmission and we still will have mask, social distancing, lock downs and still can not travel overseas. This vaccine might not be protective very long, as we see with the flu vaccine which we have to take every

year due to new variants. The vaccine companies already talk about another booster shot to cover the variants.

10. In other words, this virus will stay around and will not disappear even if we vaccinate the population. That brings us to another matter and that is vaccine. There are so many concerns about the long-term effects of the vaccine, when none of this is tested. We now only giving AstraZeneca to older people due to the blood clot concern.

We are now talking about giving young adults and even children the mRNA vaccines. This means injecting nanoparticles that can cross the blood brain barrier and the placenta blood barrier. The European Medicines Agency assessment report for the Moderna vaccine also noted that mRNA could be detected in the brain following intramuscular administration at about 2% of the level found in the plasma. In other words, we cannot control where these particles end up. There are concerns in the peer reviewed literature about consequences as autoimmune disease, Antibody-dependent Enhancement and neurodegenerative diseases.

11. We are told that these vaccines are safe for pregnant woman, from December 14, 2020, to February 28, 2021, a scientific study used data from the “v-safe after vaccination health checker” surveillance system, the v-safe pregnancy registry, and the Vaccine Adverse Event Reporting System (VAERS) to characterize the initial safety of mRNA Covid-19 vaccines in pregnant persons. Before the Pfizer vaccine 16,522 woman were pregnant but after vaccination only 2,730, while of 14,365 pregnant women who had the Moderna vaccine only 2,074 were still pregnant after vaccination.

12. This data is blocked from being published and is totally ignored by people in charge. Yet you dare to want more power. This is not about the disease any more, as you are not protecting us, you pushing vaccines in a trial phase where there are so many safety concerns. The government is keeping data from us and do not let us know the real data, but standing there telling us this vaccine is safe.

Further I oppose the bill and request:

1. the Government prepare a new one that better reflects the authority of Parliament and citizens’ rights;
2. Make public, without redaction, all data, modelling and forecasts used by the Government in the decision-making process;
3. End the overuse of delegated legislation, which override the usual checks and balances needed for a functioning democracy;

4. End QR 'sign in' mandates for shops and businesses and allow people who are not at high risk from the virus, due to age or co-morbidities, to resume normal living;

5. Normalise democratic processes and freedoms in Queensland.

6. Write into this bill that the vaccine will not be made mandatory and that there will be proper information about all side effects with proper information about the risk to the health if encountering the side effect, such as myocarditis. There is no mild myocarditis as the heart muscle does not regenerate. Once damaged it stays damaged and there will be more strain on the heart for the rest of the life, which could ultimately lead to heart diseases in the long term.

130 7. Accept the responsibility of the decision of rolling out an experimental vaccine and pay compensation for people or their families when long term debilitating or detrimental side effects occur.

8. Stop preventing medication that might be able to prevent the disease to progress to a serious and even life-threatening disease and encourage research into preventative and treatment medication.

9. Establish an expert body that will gather information from all around the world and from scientific literature on treatments and preventative medication and puts together a state wide treatment plan to be used around the state.

140 10. All adverse events due to vaccination must be made public. Full transparency is required from this government when it comes to our health

11. The government must publish how people can keep a healthy immune system without drugs.

12. Alternatives must be given to vaccination.

Kind regards

Dr Cornelia Turni
