Finance and
Administration Committee

Dear Sir/Madam,

I live in Queensland where Anna Bligh without consent from the public and with many objections sent to her, went ahead with fluoridisation in our water.

I believe strongly that this was one of the main reasons she lost government because people were outraged and called her a dictator.

I have researched a lot on this poison (fluoride) and it is causing untold illness, and not all people can afford filters and it is especially harmful to babies.

I want to have in known that I object to this being put in our water without a referendum and as it is in already taken out, (done away with).

I spoke to a lady when it was being considered from Bosnia; she said that so many people there got so ill that they had to reduce it, but unfortunately that country being a dictatorship it was not completely done away with.
