Great response

Strong premier and team

Maintain the border closure

Keep the 14 day isolation period for Melbourne nsw visitors Start looking at returning foreign students who have done at least two years of their course by ensuring they are placed in secure isolation for two weeks that they pay for themselves.

Great improvement in the bike path in Holland park with the new valerway.

Going forward look at setting up a network of bike and walk paths that run beside the rail lines. Ensure the paths are segregated for safety. Coming into summer this will minimise the traffic at peak hour as more electric bikes and scooters become available. This will also minimise contact on public transport. Also working with the council to have small coffee stop similar to the one that was in new farm park in connecting locations near train stations and suburbs. Also ensure water fountains are available at regular intervals.

Queensland infection doctors have been fantastic.

Look forward for employment opportunities leveraging off Queensland production. For example cotton growers and wool to be processed locally in regional areas into fabric. Look at what uniforms the government uses police uniforms, medical clothing , linen, combine into one contract and set up a state of the art fabric and clothing production company. Ie smart production not 1960s style of production.

Same goes for boots and belts. Also leverage off the Gibson island fertiliser and Lytton refinery by looking at setting up an energy hub such as hydrogen for transport. Ie more government collaboration to create new industries for Queensland employment.

Drive for more manufacture industries jobs instead of stimulating the infrastructure and building industries.

Look at local lithium refinement and produce batteries locally similar to what South Australia has implemented to improve their power network.

Locally produce solar panels and inverters

I think Queensland needs to drive manufacturing given our abundance of resources and depth of talented people. Also drive for more quality apprenticeships.
