Smoke drift from balconies is a serious health hazard issue as well as being a nuisance to the majority who do not smoke. It is hoped that committees such as yours will have the backbone to recommend strong action to eliminate all 2nd hand smoke from all outdoor areas. Many thousands of occupants of apartments have their existence made miserable by having to close windows and doors and forego the use of their own balconies to escape the smoke from these unhealthy, selfish individuals. Time to stop pussyfooting around and outlaw all sources which affect non smokers. No smoker should have privilege over people who wish to partake the absolute right to breath fresh air.

Best Regards Les Yule.
