---

Dear Sir/Madam, I wish to submit this evidence about the abortion issue,  
FACTS

MEDICAL

**EMBRYO, PART OF THE MOTHER OR A  
NEW LIFE DEPENDENT ON THE MOTHER**

Those who promote abortion claim the zygote/embryo/fetus is part of the mother's body and removing it is just removing part of her body. Let's look at other creatures. A hen produces eggs whether fertile or not. If fertile the new living cell is attached to the yoke at the end of the egg growth inside the hen. The egg including the yoke develop inside the hen until ready to be laid when a shell forms around the outside to encase it in a specially designed home. The embryo cell is dormant and obviously not attached to the mother and can remain so for several weeks until it is kept continuously warm. Then it activates and becomes a growing living chick. It has food (the yoke) floating in a fluid sac with a special pocket for air. It was never part of the mother hen's body. Human process is much the same except the whole process develops inside the body. Actually some believe (with some evidence) that morning sickness is the mother's rejection of the foreign body attaching itself inside. After a time the mother accepts the embryo until and after birth for many years. Like the hen the embryo was never part of the woman's body. The female part of the embryo was released as a free agent floating in fluid. It is not attached to the mother and is not even a living creature until and unless a male sperm attaches itself. (The science in it is: A zygote (from Greek ?????t?? zygotos "joined" or "yoked", from ?????? zygoun "to join" or "to yoke"), is a eukaryotic cell formed by a fertilization event between two gametes. The zygote's genome is a combination of the DNA in each gamete, and contains all of the genetic information necessary to form a new individual.) Then as an independant living creature after a few days it attaches itself to the mother for life support until born. Its life started at conception as an independant person before becoming dependent on the mother through the umbilical cord. Human features develop within a short time. In USA about 1000 per day are grievously removed and evidence is around their body parts are sold mostly for university scientific experiments. This is worse than war or road accidents. Who will stop this genocide. Nev Richards [REDACTED]
