

**Subject:**

proposed bill on termination of human life

**Date:**

Monday, 3 September 2018 5:48:05 PM

I have just read the bill you are proposing [

I have many grave concerns about what this bill proposes: Some are ....

### 1. BIOLOGICAL CONCERN

I am a Biology teacher and I am appalled that in this day of access to education the purportors of this bill can exhibit such ignorance. Once the zygote is formed a human embryo has come into existence, with a complete set of chromosomes to determine every one of the human's characteristics. The child is fully formed with all organs about week 12. So the bill is proposing to take a human life ... [terminate a human life is how it words it. This is unacceptable.

### 2. EFFECT ON THE MOTHER

Abortion, or terminating the life of that human, also has ill effects on the mother's health. I have listened to the mothers who have been through this ordeal speak of the trauma it has caused them.

### 3. UN NURSING PROFESSIONALS AGAINST IT

This week an association of nurses held an event at the UN and these amazing women challenged all the assumptions of the UN about abortion and contraception. Our Dr. Rebecca Oas also presented. Stefano Gennarini [reports](#). [for whole text]

I quote from this report....

“NEW YORK, August 31 (C-Fam)

Can women and adolescents be healthy without abortion and contraception? According to an association of nurses who spoke at UN headquarters last week, the answer is a resounding yes.

... Notably, Arvonio and other speakers used “fertility health” instead of “reproductive health,” a ubiquitous UN term that is used to legitimize abortion and contraception as a staple of international health policy.

.... Marian Nowak, assistant professor at Rutgers School of Nursing, presented her work on a new curriculum in an urban high school with a high teen pregnancy rate. The curriculum educated students about pregnancy, fetal development, and what actually happens in an abortion, which was shocking for many of them, Nowak said. The results were striking. The teen pregnancy rate dropped to zero within four years of implementing the curriculum.

“Once the students excluded the possibility of having an abortion, the pregnancy rate went down,” Nowak said.

#### 4. RIGHT TO FREE SPEECH

The section [section 4 safe zone] dealing with the geographic area round clinics that terminate human life and the subsequent sections dealing with all forms of communication against termination of human life, says to me ... everyone has the right to freedom of speech as long as it agrees with what I say ... which is no freedom at all.

These are a few issues.
