Subject: Abortion proposal for qld
Date: Friday, 24 June 2016 7:48:55 PM

I simply had to make contact with you after hearing the bill that has been put forward by a Cairns MP to legalise abortion in Queensland up to full term!

The affects and consequences this would have on the child, mother and those performing these procedures would be devastating and cannot be undone.

How often do we hear of the 'latest' medical or science research? And how often do we then hear a number of years later that 'new findings' discover a different view of the subject or a return to the original theory....often it is simply common sense kicking in.

I dont need a modern scientist to tell me that a baby in a womb IS NOT a baby....just human tissue stuff.

I had a 26 week old premmie....his name is william and he has the same mannerisms and temperament now as he did then. They are simply a tiny person hidden from sight and there is infact loads of research proving that they are all those things that make up a person.

Where is the fear of God in our national leaders to decide such a fate for future innocent Australians?

Please consider this proposal extremely discernably and consider why no where else in the world has dared to accept it in their law.

Karen Simmons
