I wish to make a submission opposing abortion Law Reform propose by MP Rob Pyne. It is an acceptable fact that human life begins at conception. Relating to abortion in the future. Abortions can easily be manipulated on the basis of social engineering and opinion. Even today many say that the foetus is merely part of the Mother's body however in a pregnancy the foetus organises his/her mother so that nutrients are deflected for fetal needs. Also did you know that the foetus is not the mother who decides when labour should be initiated and these rules of natural occurrence with pregnancy never changes. Some also argue that the living foetus is not the full person or a potential person. This is assumptive to say that the unborn baby is not a person unless it is wanted by the mother or unless it is perfectly healthy. The problem here is with this kind of reasoning that it is based on the subjective opinion of a biased party namely the mother and all other people. Personality and personhood are interesting concepts. Personalities are formed by our surroundings but personhood comes from instant conception. Therefore the claim that a human foetus is not necessarily a person is false. The above information is supplied from "The facts of abortion" John Ankerberg and John Weldon. Regards .Ron Chown
