To: [REDACTED]

Hello,

Firstly I think the cannabis used should be whole plant medicine (not a synthetic pill form) as the cannabis in it's whole form is what is needed, don't try to reinvent the wheel and sell out to big pharma.

I feel that penalties for personal use e.g up to 5 gms in QLD should be moved to a fine not going to court and having a record.

I believe you should look to Colorado, Washington DC, Oregon, California etc and Portugal for framework and studies.

I believe that the medical cannabis should be broadened to other conditions once trialled for one year. It has had large benefits which is represented in numerous studies for mental health issues such as depression, anxiety and PTSD.

End the reefer madness!!
