medicinal cannabis  
Friday, 24 June 2016 1:01:37 PM

---

Although I am from Victoria I would like to make some suggestions.

It's not as big a deal as everyone seems to want to make it. Cannabis medicine works.  
If you grow for your own use, set a minimum of 20 plants.  
If you wish to sell your produce, you need to be a registered grower and pay your tax like everyone else.

First hand I have seen the benefits of Cannabis therapy, on arthritis, cancer, Parkinson's, anxiety and depression, obesity, dementia and many other ailments.  
I have been growing cannabis and making medicine for over 40 years.

Whether or not you legalize/decriminalize/end prohibition or not. You will not stop people using cannabis. It's becoming an embarrassing law.

Apart from the medical use, the ecological benefits of cannabis to the environment are beyond expectations.

Please end this un-winable war and begin in earnest to heal our planet.

Yours sincerely  
Heather Marie Gladman  
Compassionate grower
