Subject: Public Health (Exclusion of unvaccinated Children from Child Care) Amendment Bill

I am radically opposed to this amendment on several counts.

1. Why are parents of vaccinated children so fearful of unvaccinated children, if vaccination is so protective?
2. There is much evidence to support the fact that current vaccination programs do not work.. That is why we find vaccinated children contracting the disease from which they are supposedly protected
Indeed we find the highest incidence of some diseases in areas where the vaccination rate is highest.
3. The parents who elect not to have their children vaccinated are usually those who have the capacity and concern enough to investigate the worthiness of such a program.
It is not merely a kneejerk reaction as their refusal is often depicted.
4. If you take the time and trouble to look at the rates of vaccination, and the regression of a disease, in the same time frame, the so-called success of vaccination is that it was only instigated when the disease was almost finished its natural course

There is much information available, enough to enable anybody who can read to be sceptical about vaccination per se, let alone making it compulsory.
