Subject: Vaccination
Date: Sunday, 7 July 2013 1:09:54 AM

Exclusion of vaccinated children from Child Care Bill, I wish to object to the proposed ammendment. There is too much controversy regarding vaccination. As a young mother we were told there was a terrible flu coming that would kill our children . Around 1968. Wanting to do the best for my children , and being uninformed, I had my healthy children vaccinated. The next day my son had asthma and ear infection every three weeks until he recieved vitamin treatment which helped cleansed his body. This continued for nine months . The doctor was going to have to remove his adenoids because he was starting to suffer with hearing loss. He blames that vaccination on his health problems to this day. My daughter got tonsilitis so bad that no antibiotic would cure it. She had to have her tonsils removed. Both were very healthy children till that time. My grandson had a very bad reaction to his third triple antigen needle. My son says he shows signs of autism .I have talked to people whose children have been healthy one day and brain dead the next. The day after vaccination. If people choose to have their children vaccinated, and if vaccination works, the vaccinated child need have no fear of the unvaccinated child spreading disease . May God guide you in your decision making Thanks [REDACTED]
