Dear HCSC,

Re: Exclusion of unvaccinated children from childcare - Amendment of Public Health Bill 2013

Please do not pass this Bill , which would allow for the exclusion of unvaccinated children from Childcare.

Both vaccinated & unvaccinated children can be carriers of virus & bacteria. Vaccination does not change this. This was confirmed by a Qld. Professor of Virology.

This Bill, if passed, would be in contravention of the International Bill of Human Rights which states that all medical procedures must be fully informed & voluntary.

Should it be made compulsory, will you also have compensation made available for vaccine damaged children ?

Here is one story <http://sanevax.org/cervarix-one-mothers-experience-with-hpv-vaccine-damage/>

The pharmaceutical industry is driven by profits. Parents are driven to educate themselves by their love for their children. I have made the most informed decision I can with fully medically referenced research. As it turns out, my children do have mitochondrial disorders & should they have been vaccinated could easily have become another 1 in 100 Autism statistic.

If you want the Public's confidence that vaccines are safe, have the independent studies done into vaccinated v.s. unvaccinated children. The manipulated data from pharmaceutical research is worthless. <http://globalenquirer.com/drug-companies-fined-11-billion-dollars/>

To pass this Bill amendment would be unethical. Please do not allow it.

Regards
