 T: [REDACTED] home, [REDACTED] Work
 Personal Address: [REDACTED]

To The Committee Secretary

Dear Secretary

I share insights on COVID 19, some profound. My comments are relevant though I am from NSW, because of precedents the states set, and also restrictions on my staff (in my company) and self being able to travel and do business, visit family or enjoy recreation in Queensland.

Treatment

The aged with complex ailments, are prone to respiratory illness. Yet, our hospitals give no Vitamin C for COVID 19 despite:

- Wide longitudinal use e.g. by Nobel Prize Winner, Linus Pauling, as an anti-viral with low risk – proven in new studies on polio and sepsis
- Isolation denying patients supply
- Vitamin C for COVID 19 patients in Wuhan hospitals
- Stellar models of integral medicine, e.g. Taiwan's hospitals

In hospitals, we must use non-acidic Vitamin C Complex for infections. Criminal neglect of natural medicine costs many lives. Yet, Medicare allows anti-depressants despite mega-analysis University of Pennsylvania noted in 2009, that they generally work no better than placebo! We trial drugs little as 6 weeks on individuals e.g. Risperdal.

We ignore mounting proof in Spain, Italy and China that Ozone surpasses respirators; and hydroxychloroquine combats acute COVID 19 *if used with azithromycin and zinc*.

Acid Test

MPs are rich and could take 10 percent pay cut in dire times like these.

Inconsistencies In Diagnosis and Transmission

Detection of COVID 19 may not indicate infection by it or that it is causing any signs of illness noted. Testing may not differentiate live COVID 19 and markers of past exposure and recovery - **CDC 2019-Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel**" [1].

Tests may just find other corona viruses, e.g. SARS-CoV. The best clinical sample is unknown - **World Health Organization (WHO): "Coronavirus disease (COVID-19) technical guidance: Laboratory testing for 2019-nCoV in humans"** [2].

COVID 19 is usually detectable during acute infection yet may not cause infection present. Testing does not affirm people without signs of COVID 19 infection are carriers - **FDA: “LabCorp COVID-19 RT-PCR test EUA Summary: Accelerated Emergency Use Authorization (EUA) Summary COVID-19 RT-PCR TEST (Laboratory Corporation of America)” [3].**

- The PCR test may detect COVID 19 but alone should not be used to diagnose presence of or infection by COVID 19
- PCR registers false positives in presence of Influenza A Virus (H1N1), Influenza B Virus (Yamagata), Respiratory Syncytial Virus (type B), Respiratory Adenovirus (type 3, type 7), Parainfluenza Virus (type 2), Mycoplasma Pneumoniae, Chlamydia Pneumoniae, etc.
- PCR does not confirm extent COVID 19 is present and if is causing illness
- False positives are part of tallies sent to agencies - **PCR Test Kit Elements, Creative Diagnostics, “SARS-CoV-2 Coronavirus Multiplex RT-qPCR Kit” [4].**

Australian agencies have negligently withheld from patients, affirmation of false positives by further testing and observations (negligent deception). Studies have suggested up to 90 percent of COVID 19 cases are false positives.

Dr. Maria Van Kerkhove, Head of Emerging Diseases and Zoonosis Unit, WHO, notes people with asymptomatic COVID 19 spreading it as “very rare”. The US Centre for Disease Control now says it is not spread by surfaces <https://www.naturalnews.com/2020-06-08-who-obliterated-argument-mandatory-vaccines-contact-tracing-asymptomatic-carriers-covid-19.html>

“COVID 19” cases may be ill or die by other respiratory disease or causes. Scientists at Oxford University noted in a third of COVID deaths recorded in the UK in July and August 2020, primary causes of death, cancer and road crashes, etc. Many more people than thought, may be exposed to COVID 19 without illness. For perspective, tobacco “lockdown” could save some 21,000 Australia lives p.a. with less pain. Deaths by pneumonia in China are 300,000 p.a.

Major error in global assessment occurs. In 2010, Dr Wolfgang Wodarg, Chair of the Parliamentary Assembly of the Council of Europe, investigated swine flu. His committee found it no more fatal than other flu but staff in WHO with shares in vaccine entities had cited “pandemic”

Neil Ferguson co-founded the MRC Centre for Global Infectious Disease Analysis. Heavily sponsored by Bill Gates, it is the lead advisor to national governments on epidemics and gives alarming projections on COVID 19. In 2009, a Ferguson model claimed swine flu could kill 65,000 people in the UK. The toll was under 500 - blog.nomorefakenews.com/tag/neil-ferguson/; businessinsider.com/neil-ferguson-transformed-uk-covid-response-oxford-challenge-imperial-model-2020-4/; lockdownsceptics.org/code-review-of-fergusons-model/

More Irony

Malnutrition, grief and injury from World War 1, lowered immunity to Spanish flu 1918-20. In today's lockdown of 30% of earth's people, need to flourish and prosper is largely ignored. Lockdown may enforce poverty for decades. Poverty shortens lives. Stimulus spend may accelerate national debt. Many lives may be lost yearly to related loss of universal healthcare plus social and economic stress by tax hikes. Many Australians already wait for cancer treatment and/or pay upfront.

There is evidence lockdown erodes medical care by raising ratio of phone consults. It was said under lockdown a very sleep deprived mother healing from a caesarian could not have her mother babysit (cruel). Yet babies under 6 months got left in creches while unemployment soared. They cannot make antibodies against infections (production starts at 6 months and is not full until 2 years). Plus, separation anxiety affects infant immunity.

Masks can help protect critically ill people from wearers but impair immunity of wearers by oxygen loss, build-up of CO₂ in the blood stream and breeding up of microbes in moist, enclosed space. The oxygen loss can curb alertness around heavy machinery, aggravate heart disease and prompt heat exhaustion in some settings. Masks inhibit social spacing by muffling speech and can catch on machinery – *Covid-19: Important potential side effects of wearing face masks that we should bear in mind, Professor Antonio Lazzarino and others, University London, 21 May 2020*. People are now being made to wear masks outside of operating theatre settings that are designed to give compensatory oxygen.

Masks can help protect critically ill people from wearers but impair immunity of wearers by oxygen loss and breeding up of microbes in moist, enclosed space. The oxygen loss can curb alertness around heavy machinery, aggravate heart disease and prompt heat exhaustion in some settings. Masks inhibit social spacing by muffling speech and can catch on machinery – *Covid-19: Important potential side effects of wearing face masks that we should bear in mind, Professor Antonio Lazzarino and others, University London, 21 May 2020*. People are being asked to wear masks outside of operating theatre settings that are designed to give compensatory oxygen.

Health authorities have a narrow focus on social isolation and masks. They are not taking any special care in the supposed pandemic to educate the public on achieving better natural immunity to COVID 19 or infectious disease generally though this has considerable potential to ease the load on hospitals.. An example is the widely unknown finding that if possible we should “eat a rainbow” at every meal (essentially to include foods which are green, red/purple, and orange/yellow) to boost the immune system.

By conservative epidemiological estimate, net effects of Australia’s lockdown are triple in terms of loss of physical and mental health and longevity, relative to no lockdown! Further, globally, general lockdowns have not proven as effective as targeted assistance to the most vulnerable cohorts – *Transcript and Tabled Documents By Professor Gigi Foster (12 August 2020) to Public Accounts and Estimates Committee, Victoria*.

Decon 7 is the world’s most potent sanitizer yet is relatively environmentally clean. It has hydrogen peroxide, not alcohol. Used by NZ in ship quarantines, no spread of COVID 19 was found. Our care facilities do not routinely use it. Some people avoid sanitizers due to strong alcohol in them and surveys show washing hands dropped after 1980 even by doctors.

Flu shots mandated for nursing home visitors in reply to COVID 19 imply it is yet another flu. Flu shots are only about 50 percent effective for flu and hold aluminum as a cheap preservative. A scandal blazed in Germany in 2010 as only MPs and military received aluminum free shots. Aluminum in the brain is linked to child hyperactivity, also dementia. Flu shots raise risk of some respiratory diseases through Virus Interference. Relevance to COVID 19 is not known yet – *Influenza Vaccination and Respiratory Virus Interference Among Department of Defence Personnel, Published in Vaccine Volume 38, Issue 10 January 2020*.

Risky vaccine additives include formaldehyde (insulation foam). Mass vaccination is implicated in autoimmune disease rising e.g. Lupus. Vaccines cause leaky gut, a syndrome causing heavy metal retention. This retention promotes autism, a point evident even after links between autism and vaccines got supposedly debunked - *Aluminium In Brain Tissue In Autism, Mathew Nold, Doreas Umar, Andrew King (For The Childrens’ Medical Safety Research Institute, Washington). Volume 46 March 2018 Pgs 76-82 Journal of Trace elements In Medicine and Biology*.

In an open letter, Bill Gates cites junk food and “chemicals in the water” as “spiritual reason” for COVID 19. Yet he seeks lucrative options for a vaccine laden with drugs or genetic engineering rather than allow natural herd immunity - *Talk with Chris Anderson, Curator of TED, 24 March 2020*.

He backs research to encode vaccination events in skin (loosely called micro-chipping) - [www.genengnews.com https://www.genengnews.com/topics/drug-discovery/quantum-dots-deliver-vaccines-and-](https://www.genengnews.com/topics/drug-discovery/quantum-dots-deliver-vaccines-and-)

[invisibly-encode-vaccination-history-in-skin/](https://www.bitchute.com/channel/C89bBHnjKOTY/). His personal power is obscenely high. -*RochelletheRabbit*
<https://www.bitchute.com/channel/C89bBHnjKOTY/>.

In the US lockdown, infant deaths dropped 40 percent. It is partly attributed to less infant vaccination during - **Ref: Lessons from the Lockdown. Why are so many fewer children dying? A White Paper from Health Choice By Amy Becker and Mark Blaxill, 18 June 2020.**

Punishing refusal of a COVID 19 vaccine would minimally violate articles 2, 3, 5,7, 22, 25 and 26 of the Universal Declaration of Human Rights. The League of Nations Slavery Convention (25 September 1926) noted slavery as “The state or condition of a person whom any or all of the powers attaching to the right of ownership are exercised” (crucial to any forced vaccination changing human DNA).

Over half of Australians over 75 take psych drugs that cut immunity and appetite. They also promote malnutrition and pneumonia by reducing aged people’s neurological ability to swallow food and keep lungs clear, a nasty “euthanasia”.

The optimistic quote studies on G5 that exclude the potent *pulsed* waves integral to electronics. Caution on G5 could save many lives with minimal disruption. G5 health risks include *lower immunity*. Even radiation by pre-G5 mobile phones causes human insomnia, and a slight rise in tumors in male rats while both sexes get DNA damage - **The National Toxicology Program Study**. Professor Girish Kumar, Electrical Engineering Department (Indian Institute of Technology Bombay) says: “*If you look at it combined the radiation levels are going to increase tremendously*”.

Conclusion

Some steps against COVID 19 are harmful overall. Yet we ignore relatively simple and/or safe steps for COVID 19 and other risks. Measures being taken in Queensland are far too harsh while still being narrow in their focus. They may fuel a class action currently being considered against the Queensland government by one or more law firms on the basis of legal principles regarding violation of basic human rights and disproportionate responses.

Kind Regards

Linda Vij
