### Submitter Comments:

I believe there should be some sort of annual licensing. With a limited number of hunters and a sustainable number of tags for crocs and to be over a certain size. Years ago in Groper Creek a friend of mine got charged for taking out a croc because the enviros didn't take it seriously. That one croc 3.8m ate 2 of one of my friends dogs. Then a girl I went to school with it ate 4 of her dogs plus others I'm unaware of. It used to stalk us and many others when fishing and when we used to walk across the river at low tide to pig hunt. It stalked everyone at the boat ramp because of irresponsible southerners through remains of fish and crabs into the water at the boat ramp. We have had many others come floating up in rivers and bays over the years that people have shot. This is just in the Burdekin River, Grouper Creek, Upstart Bay area. I'm sure there would be others in the Burdekin area let alone all the other areas. The crocs are moving south because there are so many big crocs fighting for territory. Has nothing to do with global warming. They don't care about cold water like most think. They are moving further inland and into cooler waters for territory. I feel nothing will happen until they are a common occurrence on the Sunshine Coast. We need a sustainable cull once a year. A number of hunters a number of tags and a certain size.
