Dear Mr Chair and Committee Members

I welcome the opportunity to make submissions on the proposed planning frameworks tabled in Parliament by the Government and the Private Member Tim Nicholls. I believe that the three planning bills tabled by the government are superior to the private member planning bills tabled by Tim Nicholls MP. The government's Planning and Environment Court bill is preferred to the Private Member's bill governing the operation of the Planning and Environment Court because the government bill allows for costs rules which allow more discretion for costs against community groups when they take legal action. This facilitates greater community involvement in important issues to the community – allowing for a higher level of participation in planning issues which impact on their quality of life.

As a keen follower of the activities of Brisbane Residents United I wish to make the following points about the proposed planning legislative frameworks currently under review by your committee. I have serious concerns of both a general and specific nature.

On a general level, my concerns involve the consultation process, the lack of transparency in the proposed planning packages and a failure to adequately address climate change issues.

Consultation Processes:

The LNP sponsored legislation had very limited community consultation and seems to have been drafted to benefit the development industry at the cost of the transparency and good governance that the community expects. There is deep disquiet with the whole community consultation process where the community was excluded from meaningful participation in the development of these pieces of legislation. The Department of Infrastructure, Local Government and Planning (DILGP) claimed in their public presentation to your committee (30th November 2016) that the consultation process for these bills encompassed a period of over two years.

The community was only made aware in March 2015, via the web, that there were wholesale changes to be made to planning legislation. There has been at least 15 to 18 months'

difference between the time the community had to become acquainted with the more detailed sections of the legislation and the time the development industry, and associated professionals, and local government organisations have been allowed. Only two representatives of Brisbane Residents United were permitted to attend the last major planning information/participation event. The whole consultation process was inequitable and undemocratic.

The 'Meet the Planner' events were designed to restrict any exchange of useful information between the community and the Department and any cross-exchange of information between the community participants in these events. One of the consultation events supposedly organised by DILGP was in fact organised by the Environmental Defenders Office.

The consultation process was neither accountable nor transparent. Submissions to the DILGP on the proposed planning legislation have not been made public. This is contrary to normal public administration processes. Without knowing the full range of issues and people's expectation, it is not possible to make an adequate submission to the Parliamentary Committee. In public consultation processes on issues such as changes to electoral commission boundaries, submissions have been made public as are submissions to the Senate

Additionally it is unacceptable that the government has broken with consultation protocol by including the Christmas vacation period in the overall time of consultation.

We believe that the drip-feeding of the whole legislative package means that the community could not adequately assess the impact of the proposed legislative changes.

Transparency

The Private Member legislation should not be considered by Parliament because it introduces a planning process which removes much of the contents of the Planning Act to supporting instruments.

The Government Bills have removed much of the content to supporting instruments. These supporting documents are still out for public consultation and so make it difficult to judge the effect of this legislation as tabled. There are 12 additional documents so far to be considered in understanding the planning legislation. The draft Planning Regulations alone consists of 378 pages. This creates uncertainty for people affected by planning decisions as to what the law is, where to look for it, and when it might be changed. The piecemeal release of the supporting documentation undermines the capacity to take a systemic view of the impacts of the legislation and creates uncertainty that is as unnecessary as it is dangerous.

The key driver and stated promise for this review of the Government Planning legislation was to provide a systemic review that would be courageous in its execution in order to systemically improve outcomes and benefits for all Queenslanders. The failure to deliver a more accessible, transparent and legible bill for the people of Queensland to protect their rights and provide certainty over planning and development issues is central to the criticism that I have of this legislation.

This legislation and its increased complexity creates significant impacts for local governments in developing and implementing local planning schemes rather than facilitating a planning process that avoids the so-called complexities of both *IPA* (1997) and *SPA* (2009) as was promised.

Transparency and legibility should be two of the principles of the legislation. On this fundamental basis the legislation has failed to deliver to the people of the State. In our assessment of the legislation a trained Barrister and Planner found the language turgid and littered with jargon. The layout and the language used are poorly executed and difficult to understand. In short it is not capable of being understood by the ordinary person with the use of plain English.

In papers published on the web statements were made that we have to move on from Planning 101, but does this mean we have to go back to English -60, and Law -30. I offer the following quotation from the Explanatory Notes as an example of an explanation of the legislation which is totally lacking in clarity.

For example, if there is a development approval for a 10 storey building, and an applicant seeks to change the approval to add a further 2 storey's, the additional 2 storeys is intended to be assessed in the context of a 10 storey building, against the assessment benchmarks relevant to a 12 storey building in that locality. (P93)

The whole of the Legislation needs to be comprehensively revised and redrafted rather than this hastily prepared version that has been created under the same government officers who prepared the LNP legislation. The EDO Scorecard clearly sets out for the public that the proposed legislation makes the situation in all counts worse than under the current legislation already in place. This is both disappointing and unacceptable.

Climate Change

The government legislation ensures that Ecologically Sustainable Development (ESD) is a central purpose of planning legislation. The Private Members Bill (the Planning Act) does not provide adequately for ESD to be a key purpose of this particular legislation.

However the legislation needs to contain a mandated requirement to consider both mitigation and adaptation to climate change. Currently the Government Planning Bill only requires consideration of how climate change can be mitigated (section 3(3)(c)(iv)). Adaptation to climate change should also be a key consideration in planning legislation. To truly address climate change issues the Bill should also incorporate measures for allowing urban spaces and residential areas to foster adaptation to climate change.

This legislation paves the way for more developments to be code assessable and to allow flexibility with regard to height, width and mass of buildings. We will see more and more single dwelling units and their surrounding greenspaces covered by concrete and bitumen. Yet hydrologists have warned for years that an increase in hard stand in urban areas will make a major contribution to local flooding issues.

Another impact of climate change is an increase in heatwaves. Around the world more people are dying from heatwaves than from drowning and storm disasters. Yet in Brisbane the planning regime is facilitating more and more concrete covered superlot developments which take up whole blocks of land without a similar increase in open space areas to counteract the impact of an increase in bitumen and concrete and consequently an increase in heat islands in urban areas.

The University of NSW has been researching building designs and materials to counteract increased heat in cities. Their latest experiment, using an infrared camera and a hand held weather station, measured the heat in Sydney's fish market bitumen car park as 57.7 degrees. Downwind of the Hyde Park fountain it was 28.8 degrees (*Sydney Morning Herald*, Nov 21-22 2015). The ABC warned in a news broadcast only this week that more people are dying from heatstroke than from other natural disaster such as floods and bushfires. In his book "Atmosphere of Hope", Tim Flannery reminded us that scientists have been giving long and loud warning that extreme heat waves are inevitable.

At a recent public protest march in Brisbane, many people, including people from the Sunshine Coast and the Gold Coast, expressed concern about the failure to plan for greenspace in urban developments.

My concerns with particular sections of the legislation include the following:

Code Assessable Developments

To strengthen the role of codes in the land use planning and development system, performance indicators should be included in the planning frameworks to help guide and assess the effectiveness of planning decisions. This will assist with the transition to urban areas to address climate change and protect biodiversity.

For this reason, the planning bill should incorporate the following principles:

- *The Act needs to define terms such as Amenity and Development Impact so that it is clear what the act seeks to promote and maintain or not support and not maintain.*
- *The Act needs to strike the correct balance between making development and development assessment quick and effective and the rights of other effected parties to be heard and to appeal.*

Development is becoming increasingly code assessable. About 90% of applications in the Brisbane City Council local authority area will be code assessable in the future. The idea that code assessable development need not be assessed in accordance with the purpose of the Act is therefore disrespectful to the community and makes a mockery of the legal process given that one of the central purposes of the Act is ESD. Section 45(4) which states that code assessable development need not be assessed in accordance with the purpose of the Act should be removed. By including this provision the purpose of the Planning Bill becomes irrelevant for a significant number of developments, and our environment suffers.

The same criticisms can be applied to section (60(2)(b) and it must be removed. This section allows approval of code assessable development without the development proposal

complying with any of the assessment benchmarks. It is indefensible that tax-payers funds have been used on the development, drafting and processing of this legislation which undermines their rights to such a degree. The implication of this piece of legislation being enacted is that it enables any development application to be assessed as code assessable at the discretion of the assessing officer. Where is the assurance of quality, accountable, transparent decision making if decision makers can simply approve an application without compliance with the imposed assessment criteria.

Private Assessment Managers

Section 48 of the Planning Bill which provides discretion as to who can be an assessment manager should be removed or redrafted. It should ensure that an assessment manager can only be an appropriately qualified, objective person with no conflict of interest with a proposed project, with measures to address ramifications should a conflict of interest arise. The quality of planning decisions may easily be eroded by providing such a significant discretion to allow the proponent to choose who will assess their application, with such little guidance as to the qualifications necessary and no recourse should a conflict of interest arise. I refer the committee to the example provided by the Environmental Defender's Office (Qld) in their submission.

This provision encourages the appointment of private development assessment managers and in concert with the extreme level of discretion that section 46 provides to allow exemption certificates it is highly concerning. This poses an unacceptable risk that Queensland will allow the mistakes seen in Sydney such as seven people buying 1-bedroom units only to find that the units have been completed as bedsits; a number of deaths of Asian students through fires occurring in units that had been illegally altered; a unit with a toilet pedestal next to the sink and no internal walls being described as the next best thing for affordable mini units.

Exemption Certificates

Section 46 of the Planning Bill which provides the discretion to provide exemption certificates from development assessment should be deleted. Significant concerns have been raised with the loose level of discretion that this section in the provision of exemption certificates. This is not in line with accountability, transparency and quality development assessment and is open to abuse under bad governance.

Many of the communications that Brisbane Residents United has with residents across Brisbane involve cases where decisions relating to height, width and mass, have been allowed to override local planning codes impacting on the privacy and amenity of local residents and destroying the local character. The overriding of local planning codes is one issue which has engendered a great deal of distrust between local residents and their elected representatives. This issue is not going to go away. The situation will only become worse once the people realise that the ability to make behind the scenes decisions about developments has been included and is enshrined in the government legislation.

Publication of Decision Making

I support the requirement for assessment managers to provide reasons for their decision making but this should also include a requirement for explaining how the advice of referral agencies has or has not been integrated and reasons why it hasn't. This provides the necessary check on balance on the power held by the State Assessment Referral Agency (SARA).

The Bill should incorporate a legislative requirement for SARA to comply with the advice of specialist referral agencies on matters over which they have jurisdiction. It is frightening that SARA has a monopoly on deciding certain development applications. SARA does not have the professional resources nor expertise to be able to adequately assess in such sensitive areas as coastal zones, cultural heritage or vulnerable vegetation communities. SARA has recently made a decision to allow development in the Memorial Park at Toowong whereas the advice of the Heritage Department was that no development should be allowed as a tree from Lone Pine will be destroyed as part of the development. The Petrie Fig Tree near Customs House is also under threat. These examples highlight the lack of rigour and the imparting risks regarding our invaluable heritage.

Public Notification Processes

The public notification process should not commence until all information required to make an adequate submission is available. The legislation should maintain the IDAS structure which is currently provided for in *SPA* (2009). This will ensure certainty and remove discretions around when each stage must be completed, including ensuring that public notification must be undertaken after all information is provided by the proponent in the information request stage. Further, where an application is required to be re-notified, it should be notified for the full period, which this requirement placed in the Act.

Conclusion

I have read and endorse the submission prepared by the Environmental Defender's Office, Queensland, particularly the proposal that the Private Member's Bills should not be passed. We support EDO's comment that the legislative framework creates uncertainty about what the legislation is, where to look for it and when it might be changed.

However, my concerns about the transparency of the legislation are of such a serious nature, that consideration should be given to organising an independent out-of-State review of the Government's planning bills to ensure future planning legislation is transparent, ethical and democratic.

If we are truly a forward looking state that wants to embrace the future then the action to implement a planning act that could be independently reviewed as being retrograde is highly damaging to the state. It returns us to dark days of planning and development corruption in Queensland and is contrary to the promises that have been made to its people.

Brisbane Residents United should be given the opportunity to appear before the Committee in their hearing into this inquiry. I would be happy to provide support for such an occasion.
