I would also like the scanners used to detect knives and weapons to additionally use other technology. To, additionally use Infrared detection or X-ray type handheld scanners to see hidden weapons, devices, drugs, people hidden in walls of premises or on people.

Police Powers and Responsibilities (Making Jack's Law Permanent) and Other Legislation Amendment Bill 2025

I do support the bill. I proposed the bill some years ago. I wanted the bill due to experience working in security, meeting organised crime gangs and individuals who are criminals in Brisbane since I was fourteen years old randomly who often expressed there criminal truths to myself who was a non judgemental person who also believed in doing counselling or asking questions to find out the truth. Often I found that they were involved in crimes offshore as well as in Brisbane,AU. Some of which may of been involved in drugs, guns or prostitution or forming part of a racist gang, a new gang or existing gang. Some had planned attacks which I often didnt believe was true but came true. (1) So this also led me to more detail in the submission here and the bill regarding scanning night clubs and the inner city areas . Due to the known attacks of USA 911 which is in the CBD areas. Also, the large devastation of weapon attacks in night clubs and sporting events in the USA or olympics. Also, I am known as an Inventor also I have Invented the Millitary dog googles which were made by the Army or Saas in Australia. For millitary dogs to see in the dark and relay footage back to the owners to give voice commands into a head set. So the technologies like this using these type dogs, or hand held devices to scan for knives and weapons, infrared or xray machines to check for hidden drugs, illegal guns, or toxic warfare , or explosive devices is important. (2) Also, taking into consideration Australia's population is growing and many foriegn criminals can find there way here legally which puts people into new circumstances similar to USA where unknown people create new environments for Australia which feel unstable or uncomfortable to others with new increased threats or levels of crime. (3) Night clubs, hotels which often have no security at the front desk of the hotel or the elevators locked in the CBD are known target areas, Car yards or other foriegn businesses which can generate revenues and drug revenues or weapon stashes, public sporting events or schools, dance schools, universities where there are no metal detectors, scanners sometimes one or two security guards who are not seen very often at places like Griffith University Nathan campus, or USQ, or QUT all of these campuses also lack scanning devices either hand held or using I.T software which scans for weapons and other known threats. Like facial recognition software. So these improvements will help keep Queensland and Australia safer as the population grows and the crime becomes more dynamic.

Yes in my support of the bill my extra submissions are below. (1) Handheld devices that scan IDs and passports to check names that are known criminals, wanted people for crimes like murder, theft, out on bail, Pedophile, kidnapping, organised crime. So a night club, sporting events, universities can deny entry to the establishment or campus. To pre-emptively stop any attack or problem on the campus. (2) for fixed, built in metal detectors to be on every entry point. So, as to body scan every entrant to the establishment or campus. For example, every Night Club in CBD areas and for Police stations, Airports, Hospitals, Universities, Hotels, sporting stadiums and events. Where, the CBD and inner city areas become 100 percent compliant. (3) Facial recognition software put into CCTV for all night clubs, Hospitals, Airports, sporting stadiums and events, Hotels, Police stations, Universities, Libraries. Being 100 percent compliant and compulsory within the CBD and inner suburbs. From experience dealing with crime, talking to many people, as an Inventor also as a person that can see many unsolved future problems, risk assessing the weaknesses in public places. These needs will increase as the Australian population increases as does the unknown people who move here either permanently or as a visitor.
