### **Submitter Comments:**

The proposed bill is fatally flawed in its premise that incorrectly ascertains that the sex of an individual can be changed simply by desire. This magical ability has yet to be observed in humans. Surgery does not change biological sex either. Dna should be used to determine this and not testosterone levels. This preoccupation with the inclusion of some individuals in society (who don't accept reality to the point of mental illness) at the expense of all women has to end. All this has achieved is to exclude and deny our natural genuine women of their rights and safety. I never thought as a girl I would ever need to address this ridiculous situation in the course of my life or even a hundred lifetimes.
