Categories: Submission

Dear Committee,

I have many things I'd like to say in regards to the topic this hearing addresses but I find it tough to be able to articulate all the things that I'm experiencing when I take time to consider this topic. That being the case, I'm going to do my best to simply mention the things that, in my opinion, should be the highest priority actions that would, in my opinion, yield the best outcomes for the long run of mental health in QLD.

- 1) Building a single mental health educational portal / support portal that is able to also facilitate the different cultural requirements of the say 500 hundred (ambiguous number quote here) providers out there. On a communication level, for their to be an educational product in the portal that trains people to be aware of the difference between co-dependent communication and collaboration to a depth of say a 10 week course (or more). For the portal to include training on ACEs (possibly highlighting Dr Nadine Burke Harris's Tedx talk on this), trauma informed care, co morbidities, counselling and debriefing and support mechanisms for vicarious trauma.
- 2) Please consider possible making a community services diploma free to the community at large. Possibly using the above portal as a cornerstone of such a product. Personally, I completed most of my community services diploma in Melbourne where it was free. This diploma was ACWA accredited. (Australian community workers association. In my opinion, on the material covered, this was a fantastic course. Something to be mindful of would be to keep the class sizes small because the by far the most difficult part of the course was accounting for the fact that a reasonable percentage of the people who were doing the course were going through really difficult things. Counselling and support systems, in my opinion, need to be a structured component of the course (independent of the course, but available to the people undertaking it.)
- 3) I don't if the attached document will be of use, but it is the survey I designed during a communications project I undertook completing my Diploma in Community Services. It attempts to engage people to the concepts of Collaborative communication and ACEs awareness. In my opinion, the most prudent place to undertake the survey would be to Child Care workers. To possibly survey that industry in regards to the topics raised in the survey.

So there are so many things I have on my mind in regards to this field but the the points raised above, for the right now, is the best I'm able to articulate. I hope my submission is of help

Yours Sincerely,

Jonathan Nicholls

Communication Survey:

- Questions regarding domestic violence throughout Australia

		a. co-depe	ndence
		b. collabora	
		i.	Do you see one of these types of relationships to be more desirable to have than the other?
		ii.	If yes, why would you consider that kind of relationship to be better?
2)			call difficult communication styles? Jld you label this / these? What name would they give it?
		(Withou	t using swear words)
		(Withou	
3)	Wha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)	Wha	at percentag	e of Australian households do you believe experience DV?
3)	Wha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)	W ha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)	W ha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)	Wha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)	Wha	at percentag	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
3)		at percentag - hear I'd lik opinion the	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their e disparity of their guess to the actual figure.
3)		at percentag - hear I'd lik opinion the	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their
		at percentag - hear I'd lik opinion the	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their e disparity of their guess to the actual figure.
		at percentag - hear I'd lik opinion the	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their e disparity of their guess to the actual figure. ow what this acronym means in the context of a person's childhood?
4)	ACE	at percentag - hear I'd lik opinion the	e of Australian households do you believe experience DV? e for the participants to guess and to them let the know the answer and then get their e disparity of their guess to the actual figure. ow what this acronym means in the context of a person's childhood?

THEN ask if the person being surveyed would be willing to take a look at the ACEs test.

If the person is willing, then proceed with the rest of the questionnaire or finish the survey here.

- a. With the details of the results ACEs tests being **kept private** (not being provided to an Early Childhood care centre)
 - but requiring ACEs tests to be done before children are enrolled...

If you are comfortable responding to the following question, please let me know your thoughts:

	- What are your thoughts on requiring childcare centres to require ACEs assessments to be done before they are enrolled to a centre?			
5)	If Early Childhood Centres required ACEs test to be done on enrolment:			
	- Do you believe creating the awareness into the medical system by requiring the test would better:			
	• The health system's awareness of how to better help families (also where families are provided a pamphlet of long-term impacts of ACEs when the ACEs test is done)?			
	• the lives of families who have had difficult things happen for them through their lives, and			
	• the lives of families for whom are involved with such things as domestic violence?			
6)	Do you believe programs could be built to develop better communication within society?			
	If yes , Do you have any suggestions on what that would like? (promoting it's ok to not (to be considerate of possible trauma triggers), it's just a final chance to put your ideas across for the survey).
