**Date** 03-28-2013

**I, as a Queensland primary producer,** support the changes you have proposed, however, have suggested some further recommendations with the Bill.

**My production type is** grazing dryland farming

**The land tenure on my property is** freehold

**I have Remnant Vegetation found on my property** Yes

**I have High Value Regrowth Vegetation found on my property** Yes

**My main issue/s with the current vegetation management framework is:**  
Overly complex process to obtain a development application/permit for vegetation management  
Incorrect mapping  
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)  
Over-administration or administration of vegetation management by inexperienced departmental staff

**If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:**  
It will mean that we will be able to manage the land in a more reposable and enviromentally beneficial way both improving the control of invasive plants and providing better haditat for both domestic and native animal. it will lead to beter comunity dynamics to allow for a bigger diversification of vegetation. Healthy landscapes make higher profit that poor ones.

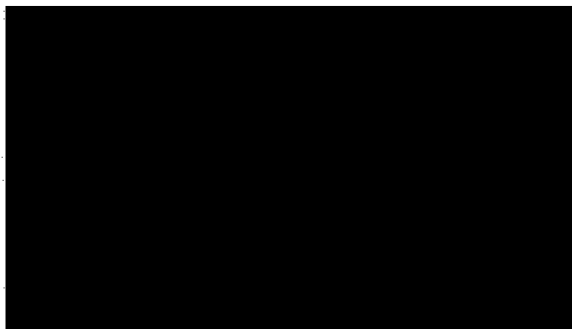

**If I could propose further changes to the legislation these changes would include:**  
Reclassification of the landscapes so that the landscape were easier to interpret, and had real meaning as to what the prefered land use was. This has several benifits as it would aid overall better district land use which in turn would lessen inappropriate land use. Farming arid areas is not susainable and should be limited in areas were it will cause ong term damage rather than MINING short term suspect land.
