I, as a Queensland primary producer, strongly support the changes you have proposed with this Bill.

My production type is Wool and Beef

The land tenure on my property is Leasehold

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property No

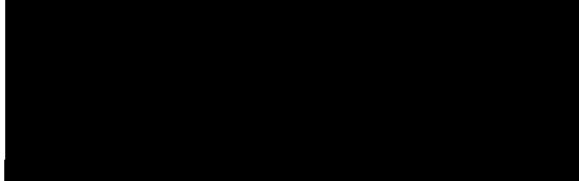

My main issue/s with the current vegetation management framework is:
 Overly complex process to obtain a development application/permit for vegetation management
 The length of time taken to obtain a development approval/permit for vegetation management
 The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
 Incorrect mapping
 Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
 Over-administration or administration of vegetation management by inexperienced departmental staff

If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:
 Less time spent filling out forms and applications

If I could propose further changes to the legislation these changes would include:
 Go further with this bill in regards to mulga for fodder consumption and as an overall bill to do with tree clearing as at the end of the day, economics will decide how much land is cleared.
 If it is not economical to do so it will not be cleared.
