Date 04-05-2013

I, as a Queensland primary producer, support the changes you have proposed, however, have suggested some further recommendations with the Bill.

My production type is Cattle Sheep

The land tenure on my property is Leasehold

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property Yes

My main issue/s with the current vegetation management framework is:
Overly complex process to obtain a development application/permit for vegetation management
The length of time taken to obtain a development approval/permit for vegetation management
The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
Incorrect mapping
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
Over-administration or administration of vegetation management by inexperienced departmental staff
Unable to thin remnant vegetation despite obvious signs that it has thickened from it's natural state

If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:
Able to thin remnant vegetation so as to at least get some production out of it while still maintaining its environmental benefits

If I could propose further changes to the legislation these changes would include:
to extend all the changes to leasehold land
