Date 04-10-2013

My production type is cattle breeding & finishing mearworks cattle

The land tenure on my property is GHPL

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property Yes

My main issue/s with the current vegetation management framework is:
Overly complex process to obtain a development application/permit for vegetation management
The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
Incorrect mapping
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
Over-administration or administration of vegetation management by inexperienced departmental staff
I believe there should be a provision in the act where one can apply for a permit to selectively treat/clear invasive thickening seedlings in remnant vegetation.(eg. predominantly eucalypt based, mixed vegetation community.)

If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:
It will allow us to provide the necessary ongoing improvements/maintainance to our property, without having to go to the Department each time for a permit.
