My production type is Beef Grazing

The land tenure on my property is lease and freehold

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property No

My main issue/s with the current vegetation management framework is:
Overly complex process to obtain a development application/permit for vegetation management
The length of time taken to obtain a development approval/permit for vegetation management
The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
Incorrect mapping
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
Over-administration or administration of vegetation management by inexperienced departmental staff

If I could propose further changes to the legislation these changes would include:
Even if there was an open field for Broad acre clearing most properties would not clear as the cost involved in pulling and repulling would be too high.
Therefor with workable guildlines there would not be any loss in tree numbers as compared to the undergrowth growing in uncleared country.(Simple to ask any landholder if the timber is getting any thicker in uncleared country)
