I, as a Queensland primary producer, strongly support the changes you have proposed with this Bill.

My production type is wool and beef

The land tenure on my property is leasehold and freehold

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property Yes

My main issue/s with the current vegetation management framework is:
Overly complex process to obtain a development application/permit for vegetation management
The length of time taken to obtain a development approval/permit for vegetation management
The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
Incorrect mapping
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
Over-administration or administration of vegetation management by inexperienced departmental staff

If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:
It will mean easier management of stock in drought time, easier management of thickening and the opportunity to increase production. In addition less dealings with departmental greenies who have flawed views on the management of our properties.
