I, as a Queensland primary producer, strongly support the changes you have proposed with this Bill.

My production type is beef cattle

The land tenure on my property is GHPL,PH,Freehold

I have Remnant Vegetation found on my property Yes

I have High Value Regrowth Vegetation found on my property No

My main issue/s with the current vegetation management framework is:
Overly complex process to obtain a development application/permit for vegetation management
The length of time taken to obtain a development approval/permit for vegetation management
The length of time to utilise a permit/development approval is too short (currently 5 years) and doesn't allow for long-term property planning
Incorrect mapping
Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)
Over-administration or administration of vegetation management by inexperienced departmental staff

If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:
Less time spent in the office tangled up in red tape.Remove over the top restrictions hampering development and productivity.Allow me to manage this resource in a sustainable way without interference from fanatical green moulded government policies.After all, my family has been here for over 100yrs and the land is in better condition now than it was at the turn of the 19th century.
