I, as a Queensland primary producer,	strongly support the changes you have proposed with this Bill.
My production type is	Beef cattle & farming
The land tenure on my property is	Freehold & Freeholding lease
I have Remnant Vegetation found on my property	Yes
I have High Value Regrowth Vegetation found on my property	Yes
My main issue/s with the current vegetation management framework is:	<p>Incorrect mapping</p> <p>Overregulation of activities that are routine and essential to the management of my property (for example clearing for fence lines, firebreaks, roads, or infrastructure)</p> <p>Over-administration or administration of vegetation management by inexperienced departmental staff</p>
If this Bill is passed it will mean the following for my property in terms of improved productive, environmental and/or social aspects:	<p>Our property lots have little or minimal high value and remnant vegetation areas and these areas being small are of no concern to us.</p> <p>Our property is made up of predominantly brigalow belah scrub soils which requires maintenance. It is highly productive country and must be allowed to be kept that way.</p> <p>We are custodians of the land and take great care to keep our land in good condition and productive.</p> <p>Productivity is vital.</p> <p>Over-administration or administration by inexperienced departmental staff and government personnel cause great concern to the many land owners who strive to take care of the land they alone know and love, and have vast amounts of knowledge.</p>
