### Submitter Comments:

E-mobility safety and use ? Interesting term. I don't think they go together. The number of e-bikes on the FOOTPATH and the speed they go is dangerous. simple as that. They make no noise so you don't hear they coming. They zig zag around walkers, dogs, children, seniors, other riders, skateboarders, and runners without care. I can't tell you how many times my wife or I have come close to being hit by one. Very few wear helmets, or care about what speed they are going. It is only a matter of time before someone is killed by one of these things. Then of course there is the cost to the community when they do have an accident in medical care, apart from the human cost.

I don't understand how riders aren't licenced to ride a electric motorised vehicle, nor do I understand why the bike doesnt have to be registered including some sort of insurance policy for injury to third parties. Bottom line they are a " dangerous [REDACTED] nuisance".
